THE

P L A N

OF AN

ENGLISH DICTIONARY.

*To the Right Honourable PHILIP DORMER, Earl of
CHESTERFIELD, one of his Majesty's Principal Secre-
taries of State.*

MY LORD,

WHEN first I undertook to write an English Dictionary, I had no expectation of any higher patronage than that of the proprietors of the copy, nor prospect of any other advantage than the price of my labour. I knew that the work in which I engaged is generally considered as drudgery for the blind, as the proper toil of artless industry; a task that requires neither the light of learning, nor the activity of genius, but may be successfully performed without any higher quality than that of bearing burthens with dull patience, and beating the track of the alphabet with sluggish resolution.

Whether this opinion, so long transmitted, and so widely propagated, had its beginning from truth and nature, or from accident and prejudice; whether it be decreed by the authority of reason, or the tyranny of ignorance, that of all the candidates for literary praise, the unhappy lexicographer holds the lowest place, neither vanity nor interest incited me to inquire. It appeared that the province allotted me was, of all the regions of learning, generally confessed to be the least delightful, that it was believed to produce neither fruits nor flowers; and that, after a long and laborious cultivation, not even the barren laurel had been found upon it.

Yet on this province, my Lord, I entered, with the pleasing hope, that, as it was low, it likewise would be safe. I was drawn forward with the prospect of employment, which, though not splendid, would be useful; and which, though it could not make my life envied, would keep it innocent; which would awaken no passion, engage me in no contention, nor throw in my way any temptation to disturb the quiet of others by censure, or my own by flattery.

I had read indeed of times, in which princes and statesmen thought it part of their honour to promote the improvement of their native tongues; and in which dictionaries were written under the protection of greatness. To the patrons of such undertakings I willingly paid the homage of believing that they, who were thus solicitous for the perpetuity of their language, had reason to expect that their actions would be celebrated by posterity, and that

the eloquence which they promoted would be employed in their praise. But I consider such acts of beneficence as prodigies, recorded rather to raise wonder than expectation; and content with the terms that I had stipulated, had not suffered my imagination to flatter me with any other encouragement, when I found that my design had been thought by your Lordship of importance sufficient to attract your favour.

How far this unexpected distinction can be rated among the happy incidents of life, I am not yet able to determine. Its first effect has been to make me anxious, lest it should fix the attention of the public too much upon me, and, as it once happened to an epic poet of France, by raising the reputation of the attempt, obstruct the reception of the work. I imagine what the world will expect from a scheme, prosecuted under your Lordship's influence; and I know that expectation, when her wings are once expanded, easily reaches heights which performance never will attain: and when she has mounted the summit of perfection, derides her follower, who dies in the pursuit.

Not therefore to raise expectation, but to repress it, I here lay before your Lordship the Plan of my undertaking, that more may not be demanded than I intend; and that, before it is too far advanced to be thrown into a new method, I may be advertised of its defects or superfluities. Such informations I may justly hope, from the emulation with which those, who desire the praise of elegance or discernment, must contend in the promotion of a design

that you, my Lord, have not thought unworthy to share your attention with treaties and with wars.

In the first attempt to methodise my ideas, I found a difficulty which extended itself to the whole work. It was not easy to determine by what rule of distinction the words of this Dictionary were to be chosen. [The chief intent of it is to preserve the purity, and ascertain the meaning of our English idiom; and this seems to require nothing more than that our language be considered, so far as it is our own; that the words and phrases used in the general intercourse of life, or found in the works of those whom we commonly style polite writers, be selected] without including the terms of particular professions; since, with the arts to which they relate, they are generally derived from other nations, and are very often the same in all the languages of this part of the world. This is, perhaps, the exact and pure idea of a grammatical dictionary; but in lexicography, as in other arts, naked science is too delicate for the purposes of life. The value of a work must be estimated by its use: it is not enough that a dictionary delights the critic, unless, at the same time, it instructs the learner; as it is to little purpose that an engine amuses the philosopher by the subtilty of its mechanism, if it requires so much knowledge in its application as to be of no advantage to the common workman.

The title which I prefix to my work has long conveyed a very miscellaneous idea, and they that take a dictionary into their hands, have been accustomed to expect from it a solution of almost every

difficulty. If foreign words therefore were rejected, it could be little regarded, except by critics, or those who aspire to criticism; and however it might enlighten those that write, would be all darkness to them that only read. The unlearned much oftener consult their dictionaries for the meaning of words, than for their structures or formations; and the words that most want explanation, are generally terms of art; which, therefore, experience has taught my predecessors to spread with a kind of pompous luxuriance over their productions.

The academicians of France, indeed, rejected terms of science in their first essay, but found afterwards a necessity of relaxing the rigour of their determination; and, though they would not naturalize them at once by a single act, permitted them by degrees to settle themselves among the natives with little opposition; and it would surely be no proof of judgment to imitate them in an error which they have now retracted, and deprive the book of its chief use, by scrupulous distinctions.

Of such words, however, all are not equally to be considered as parts of our language; for some of them are naturalized and incorporated, but others still continue aliens, and are rather auxiliaries than subjects. This naturalization is produced either by an admission into common speech, in some metaphorical signification, which is the acquisition of a kind of property among us; as we say the *zenith* of advancement, the *meridian* of life, the *cynosure** of neighbouring eyes; or it is the consequence of

* Milton.

long intermixture and frequent use, by which the ear is accustomed to the sound of words, till their original is forgotten, as in *equator*, *satellites*; or of the change of a foreign into an English termination, and a conformity to the laws of the speech into which they are adopted; as in *category*, *cachexy*, *peripneumony*.

Of those which still continue in the state of aliens, and have made no approaches towards assimilation, some seem necessary to be retained; because the purchasers of the Dictionary will expect to find them. Such are many words in the common law, as *capias*, *habeas corpus*, *præmunire*, *nisi prius*: such are some terms of controversial divinity, as *hypostasis*; and of physic, as the names of diseases; and in general, all terms which can be found in books not written professedly upon particular arts, or can be supposed necessary to those who do not regularly study them. Thus, when a reader not skilled in physic happens in Milton upon this line,

————— pining atrophy,
Marasmus, and wide-wasting pestilence,

he will, with equal expectation, look into his dictionary for the word *marasmus*, as for *atrophy*, or *pestilence*; and will have reason to complain if he does not find it.

It seems necessary to the completion of a dictionary designed not merely for critics, but for popular use, that it should comprise, in some degree, the peculiar words of every profession; that the terms of war and navigation should be inserted, so far as they can be required by readers of travels, and of

history; and those of law, merchandise, and mechanical trades, so far as they can be supposed useful in the occurrences of common life.

But there ought, however, to be some distinction made between the different classes of words; and therefore it will be proper to print those which are incorporated into the language in the usual character, and those which are still to be considered as foreign, in the *italic* letter.

Another question may arise with regard to appellatives, or the names of species. It seems of no great use to set down the words *horse, dog, cat, willow, alder, daisy, rose*, and a thousand others, of which it will be hard to give an explanation, not more obscure than the word itself. Yet it is to be considered, that, if the names of animals be inserted, we must admit those which are more known, as well as those with which we are, by accident, less acquainted; and if they are all rejected, how will the reader be relieved from difficulties produced by allusions to the crocodile, the chameleon, the ichneumon, and the hyæna? If no plants are to be mentioned, the most pleasing part of nature will be excluded, and many beautiful epithets be unexplained. If only those which are less known are to be mentioned, who shall fix the limits of the reader's learning? The importance of such explications appears from the mistakes which the want of them has occasioned. Had Shakespeare had a dictionary of this kind, he had not made the *woodbine* entwine the *honey-suckle*; nor would Milton, with such assistance, have disposed so improperly of his *ellops* and his *scorpion*.

Besides, as such words, like others, require that their accents should be settled, their sounds ascertained, and their etymologies deduced, they cannot be properly omitted in the dictionary. And though the explanations of some may be censured as trivial, because they are almost universally understood; and those of others as unnecessary, because they will seldom occur; yet it seems not proper to omit them, since it is rather to be wished that many readers should find more than they expect, than that one should miss what he might hope to find.

When all the words are selected and arranged, the first part of the work to be considered is the orthography, which was long vague and uncertain; which at last, when its fluctuation ceased, was in many cases settled but by accident; and in which, according to your Lordship's observation, there is still great uncertainty among the best critics: nor is it easy to state a rule by which we may decide between custom and reason, or between the equiponderant authorities of writers alike eminent for judgment and accuracy.

The great orthographical contest has long subsisted between etymology and pronunciation. It has been demanded, on one hand, that men should write as they speak; but as it has been shewn that this conformity never was attained in any language, and that it is not more easy to persuade men to agree exactly in speaking than in writing it may be asked with equal propriety, why men do not rather speak as they write. In France, where this controversy was at its greatest height, neither party, however ardent, durst adhere steadily to their own rule; the

etymologist was often forced to spell with the people ; and the advocate for the authority of pronunciation found it sometimes deviating so capriciously from the received use of writing, that he was constrained to comply with the rule of his adversaries, lest he should lose the end by the means, and be left alone by following the crowd.

When a question of orthography is dubious, that practice has, in my opinion, a claim to preference which preserves the greatest number of radical letters, or seems most to comply with the general custom of our language. But the chief rule which I propose to follow is, to make no innovation, without a reason sufficient to balance the inconvenience of change ; and such reasons I do not expect often to find. All change is of itself an evil, which ought not to be hazarded but for evident advantage ; and as inconstancy is in every case a mark of weakness, it will add nothing to the reputation of our tongue. There are, indeed, some who despise the inconveniences of confusion, who seem to take pleasure in departing from custom, and to think alteration desirable for its own sake ; and the reformation of our orthography, which these writers have attempted, should not pass without its due honours, but that I suppose they hold a singularity its own reward, or may dread the fascination of lavish praise.

The present usage of spelling, where the present usage can be distinguished, will therefore, in this work, be generally followed ; yet there will be often occasion to observe, that it is in itself inaccurate, and tolerated rather than chosen ; particularly when, by a change of one letter, or more, the meaning of

a word is obscured ; as in *farrier*, or *ferrier*, as it was formerly written, from *ferrum*, or *fer* ; in *gibberish*, for *gebrish*, the jargon of Geber and his chymical followers, understood by none but their own tribe. It will be likewise sometimes proper to trace back the orthography of different ages, and shew by what gradations the word departed from its original.

Closely connected with orthography is pronunciation, the stability of which is of great importance to the duration of a language, because the first change will naturally begin by corruptions in the living speech. The want of certain rules for the pronunciation of former ages, has made us wholly ignorant of the metrical art of our ancient poets ; and since those who study their sentiments regret the loss of their numbers, it is surely time to provide that the harmony of the moderns may be more permanent.

A new pronunciation will make almost a new speech ; and therefore, since one great end of this undertaking is to fix the English language, care will be taken to determine the accentuation of all polysyllables by proper authorities, as it is one of those capricious phænomena which cannot be easily reduced to rules. Thus there is no antecedent reason for difference of accent in the words *dolorous* and *sonorous* ; yet of the one Milton gives the sound in this line:

He pass'd o'er many a region *dolorous* ;
and that of the other in this,

Sonorous metal blowing martial sounds.

It may likewise be proper to remark metrical licences, such as contractions, *generous, gen'rous; reverend, rev'rend*; and coalitions, as *region, question*.

But it is still more necessary to fix the pronunciation of monosyllables, by placing with them words of correspondent sound, that one may guard the other against the danger of that variation, which, to some of the most common, has already happened; so that the words *wound* and *wind*, as they are now frequently pronounced, will not rhyme to *sound* and *mind*. It is to be remarked, that many words written alike are differently pronounced, as *flow*, and *brow*: which may be thus registered, *flow, woe; brow, now*; or of which the exemplification may be generally given by a distich: thus the words *tear*, or lacerate, and *tear*, the water of the eye, have the same letters, but may be distinguished thus, *tear, dare; tear, peer*.

Some words have two sounds, which may be equally admitted, as being equally defensible by authority. Thus *great* is differently used:

For Swift and him despis'd the face of state,
The sober follies of the wise and *great*.—POPE.

As if misfortune made the throne her seat,
And none could be unhappy but the *great*.—ROWE.

The care of such minute particulars may be censured as trifling; but these particulars have not been thought unworthy of attention in more polished languages.

The accuracy of the French in stating the sounds of their letters, is well known; and, among the

Italians, Crescembeni has not thought it unnecessary to inform his countrymen of the words which, in compliance with different rhymes, are allowed to be differently spelt, and of which the number is now so fixed, that no modern poet is suffered to increase it.

When the orthography and pronunciation are adjusted, the etymology or derivation is next to be considered, and the words are to be distinguished according to the different classes, whether simple, as *day*, *light*, or compound, as *day-light*; whether primitive, as, to *act*, or derivative, as *action*, *actionable*, *active*, *activity*. This will much facilitate the attainment of our language, which now stands in our dictionaries a confused heap of words without dependence, and without relation.

When this part of the work is performed, it will be necessary to inquire how our primitives are to be deduced from foreign languages, which may be often very successfully performed by the assistance of our own etymologists. This search will give occasion to many curious disquisitions, and sometimes perhaps to conjectures, which to readers unacquainted with this kind of study, cannot but appear improbable and capricious. But it may be reasonably imagined, that what is so much in the power of men as language, will very often be capriciously conducted. Nor are these disquisitions and conjectures to be considered altogether as wanton sports of wit, or vain shews of learning; our language is well known not to be primitive or self-originated, but to have adopted words of every generation, and, either for the supply of its necessities, or the increase of its copiousness, to have received additions from very

distant regions; so that in search of the progenitors of our speech, we may wander from the tropic to the frozen zone, and find some in the vallies of Palestine, and some upon the rocks of Norway.

Beside the derivation of particular words, there is likewise an etymology of phrases. Expressions are often taken from other languages; some apparently, as to *run a risque, courir un risque*; and some even when we do not seem to borrow their words; thus, *to bring about* or accomplish, appears an English phrase, but in reality our native word *about*, has no such import, and is only a French expression, of which we have an example in the common phrase *venir à bout d'une affaire*.

In exhibiting the descent of our language, our etymologists seem to have been too lavish of their learning, having traced almost every word through various tongues, only to shew what was shewn sufficiently by the first derivation. This practice is of great use in synoptical lexicons, where mutilated and doubtful languages are explained by their affinity to others more certain and extensive, but is generally superfluous in English etymologies. When the word is easily deduced from a Saxon original, I shall not often inquire further, since we know not the parent of the Saxon dialect; but when it is borrowed from the French, I shall shew whence the French is apparently derived. Where a Saxon root cannot be found, the defect may be supplied from kindred languages, which will be generally furnished with much liberality by the writers of our glossaries; writers who deserve often the highest praise, both of judgment and industry, and may expect at least to

be mentioned with honour by me, whom they have freed from the greatest part of a very laborious work, and on whom they have imposed, at worst, only the easy task of rejecting superfluities.

By tracing in this manner every word to its original, and not admitting, but with great caution, any of which no original can be found, we shall secure our language from being over-run with cant, from being crowded with low terms, the spawn of folly or affectation, which arise from no just principles of speech, and of which therefore no legitimate derivation can be shewn.

When the etymology is thus adjusted, the analogy of our language is next to be considered; when we have discovered whence our words are derived, we are to examine by what rules they are governed, and how they are inflected through their various terminations. The terminations of the English are few, but those few have hitherto remained unregarded by the writers of our dictionaries. Our substantives are declined only by the plural termination, our adjectives admit no variation but in the degrees of comparison, and our verbs are conjugated by auxiliary words, and are only changed in the preter tense.

To our language may be with great justness applied the observation of Quintilian, that speech was not formed by an analogy sent from heaven. It did not descend to us in a state of uniformity and perfection, but was produced by necessity, and enlarged by accident, and is therefore composed of dissimilar parts, thrown together by negligence, by affectation, by learning, or by ignorance.

Our inflections therefore are by no means constant, but admit of numberless irregularities, which in this Dictionary will be diligently noted. Thus *fox* makes in the plural *foxes*, but *ox* makes *oxen*. *Sheep* is the same in both numbers. Adjectives are sometimes compared by changing the last syllable, as *proud*, *prouder*, *proudest*; and sometimes by particles prefixed, as *ambitious*, *more ambitious*, *most ambitious*. The forms of our verbs are subject to great variety; some end their preter tense in *ed*, as I *love*, I *loved*, I have *loved*; which may be called the regular form, and is followed by most of our verbs of southern original. But many depart from this rule, without agreeing in any other; as I *shake*, I *shook*, I have *shaken*, or *shook*, as it is sometimes written in poetry; I *make*, I *made*, I have *made*; I *bring*, I *brought*; I *wring*, I *wrung*; and many others, which, as they cannot be reduced to rules, must be learned from the dictionary rather than the grammar.

The verbs are likewise to be distinguished according to their qualities, as actives from neuters; the neglect of which has already introduced some barbarities in our conversation, which if not obviated by just animadversions, may in time creep into our writings.

Thus, my Lord, will our language be laid down, distinct in its minutest subdivisions, and resolved into its elemental principles. And who upon this survey can forbear to wish, that these fundamental atoms of our speech might obtain the firmness and immutability of the primogenial and constituent particles of matter, that they might retain their sub-

stance while they alter their appearance, and be varied and compounded, yet not destroyed.

But this is a privilege which words are scarcely to expect : for, like their author, when they are not gaining strength, they are generally losing it. Though art may sometimes prolong their duration, it will rarely give them perpetuity ; and their changes will be almost always informing us, that language is the work of man, of a being from whom permanence and stability cannot be derived.

Words having been hitherto considered as separate and unconnected, are now to be likewise examined as they are ranged in their various relations to others by the rules of syntax or construction, to which I do not know that any regard has been yet shewn in English dictionaries, and in which the grammarians can give little assistance. The syntax of this language is too inconstant to be reduced to rules, and can be only learned by the distinct consideration of particular words as they are used by the best authors. Thus, we say, according to the present modes of speech, The soldier died *of* his wounds, and the sailor perished *with* hunger : and every man acquainted with our language would be offended by a change of these particles, which yet seem originally assigned by chance, there being no reason to be drawn from grammar why a man may not, with equal propriety, be said to die *with* a wound, or perish *of* hunger.

Our syntax therefore is not to be taught by general rules, but by special precedents ; and in examining whether Addison has been with justice accused of a solecism in this passage,

PREFACE

TO THE

ENGLISH DICTIONARY.

IT is the fate of those who toil at the lower employments of life, to be rather driven by the fear of evil, than attracted by the prospect of good ; to be exposed to censure, without hope of praise ; to be disgraced by miscarriage, or punished for neglect, where success would have been without applause, and diligence without reward.

Among these unhappy mortals is the writer of dictionaries ; whom mankind have considered, not as the pupil, but the slave of science, the pioneer of literature, doomed only to remove rubbish and clear obstructions from the paths through which Learning and Genius press forward to conquest and glory, without bestowing a smile on the humble drudge that facilitates their progress. Every other author may aspire to praise ; the lexicographer can only hope to escape reproach, and even this negative recompence has been yet granted to very few.

I have, notwithstanding this discouragement, attempted a Dictionary of the English language, which,

while it was employed in the cultivation of every species of literature, has itself been hitherto neglected; suffered to spread, under the direction of chance, into wild exuberance; resigned to the tyranny of time and fashion; and exposed to the corruptions of ignorance, and caprices of innovation.

When I took the first survey of my undertaking, I found our speech copious without order, and energetic without rule: wherever I turned my view, there was perplexity to be disentangled, and confusion to be regulated; choice was to be made out of boundless variety, without any established principle of selection; adulterations were to be detected, without a settled test of purity; and modes of expression to be rejected or received, without the suffrages of any writers of classical reputation or acknowledged authority.

Having therefore no assistance but from general grammar, I applied myself to the perusal of our writers; and noting whatever might be of use to ascertain or illustrate any word or phrase, accumulated in time the materials of a dictionary, which, by degrees, I reduced to method, establishing to myself, in the progress of the work, such rules as experience and analogy suggested to me; experience, which practice and observation were continually increasing; and analogy, which, though in some words obscure, was evident in others.

In adjusting the *Orthography*, which has been to this time unsettled and fortuitous, I found it necessary to distinguish those irregularities that are inherent in our tongue, and perhaps coëval with it,

from others which the ignorance or negligence of later writers has produced. Every language has its anomalies, which, though inconvenient, and in themselves once unnecessary, must be tolerated among the imperfections of human things, and which require only to be registered, that they may not be increased, and ascertained, that they may not be confounded: but every language has likewise its improprieties and absurdities, which it is the duty of the lexicographer to correct or proscribe.

As language was at its beginning merely oral, all words of necessary or common use were spoken before they were written; and while they were unfixed by any visible signs, must have been spoken with great diversity, as we now observe those who cannot read to catch sounds imperfectly, and utter them negligently. When this wild and barbarous jargon was first reduced to an alphabet, every penman endeavoured to express, as he could, the sounds which he was accustomed to pronounce or to receive, and vitiated in writing such words as were already vitiated in speech. The powers of the letters, when they were applied to a new language, must have been vague and unsettled, and therefore different hands would exhibit the same sound by different combinations.

From this uncertain pronunciation arise in a great part the various dialects of the same country, which will always be observed to grow fewer, and less different, as books are multiplied; and from this arbitrary representation of sounds by letters, proceeds that diversity of spelling, observable in the Saxon re-

mains, and I suppose in the first books of every nation, which perplexes or destroys analogy, and produces anomalous formations, which being once incorporated, can never be afterward dismissed or reformed.

Of this kind are the derivatives *length* from *long*, *strength* from *strong*, *darling* from *dear*, *breadth* from *broad*, from *dry*, *drought*, and from *high*, *height*, which Milton, in zeal for analogy, writes *highth*: *Quid te exempta juvat spinis de pluribus una?* to change all would be too much, and to change one is nothing.

This uncertainty is most frequent in the vowels, which are so capriciously pronounced, and so differently modified, by accident or affectation, not only in every province, but in every mouth, that to them, as is well known to etymologists, little regard is to be shewn in the deduction of one language from another.

Such defects are not errors in orthography, but spots of barbarity impressed so deep in the English language, that criticism can never wash them away: these, therefore, must be permitted to remain untouched; but many words have likewise been altered by accident, or depraved by ignorance, as the pronunciation of the vulgar has been weakly followed; and some still continue to be variously written, as authors differ in their care or skill: of these it was proper to inquire the true orthography, which I have always considered as depending on their derivation, and have therefore referred them to their original languages: thus I write *enchant*, *enchantment*, *enchanter*, after the French, and *incantation* after the

Latin; thus *entire* is chosen rather than *intire*, because it passed to us not from the Latin *integer*, but from the French *entier*.

Of many words it is difficult to say whether they were immediately received from the Latin or the French, since at the time when we had dominions in France, we had Latin service in our churches. It is, however, my opinion, that the French generally supplied us; for we have few Latin words, among the terms of domestic use, which are not French; but many French, which are very remote from Latin.

Even in words of which the derivation is apparent, I have been often obliged to sacrifice uniformity to custom; thus I write, in compliance with a numberless majority, *convey* and *inveigh*, *deceit* and *receipt*, *fancy* and *phantom*; sometimes the derivative varies from the primitive, as *explain* and *explanation*, *repeat* and *repetition*.

Some combinations of letters having the same power, are used indifferently without any discoverable reason of choice, as in *choak*, *choke*; *soap*, *sope*; *fenel*, *fuel*, and many others; which I have sometimes inserted twice, that those who search for them under either form, may not search in vain.

In examining the orthography of any doubtful word, the mode of spelling by which it is inserted in the series of the dictionary, is to be considered as that to which I give, perhaps not often rashly, the preference. I have left, in the examples, to every author his own practice unmolested, that the reader may balance suffrages, and judge between us: but this question is not always to be determined by reputed or by real learning; some men, intent upon

greater things, have thought little on sounds and derivations; some, knowing in the ancient tongues, have neglected those in which our words are commonly to be sought. Thus Hammond writes *fecibleness*, for *feasibleness*, because I suppose he imagined it derived immediately from the Latin; and some words, such as *dependant*, *dependent*; *dependance*, *dependence*, vary their final syllable, as one or other language is present to the writer.

In this part of the work, where caprice has long wanted without control, and vanity sought praise by petty reformation, I have endeavoured to proceed with a scholar's reverence for antiquity, and a grammarian's regard to the genius of our tongue. I have attempted few alterations, and among those few, perhaps the greater part is from the modern to the ancient practice; and I hope I may be allowed to recommend to those, whose thoughts have been perhaps employed too anxiously on verbal singularities, not to disturb, upon narrow views, or for minute propriety, the orthography of their fathers. It has been asserted, that for the law to be *known*, is of more importance than to be *right*. 'Change,' says Hooker, 'is not made without inconvenience, even from worse to better.' There is in constancy and stability a general and lasting advantage, which will always overbalance the slow improvements of gradual correction. Much less ought our written language to comply with the corruptions of oral utterance, or copy that which every variation of time or place makes different from itself, and imitate those changes, which will again be changed, while imitation is employed in observing them.

This recommendation of steadiness and uniformity does not proceed from an opinion, that particular combinations of letters have much influence on human happiness; or that truth may not be successfully taught by modes of spelling fanciful and erroneous: I am not yet so lost in lexicography, as to forget that *words are the daughters of earth, and that things are the sons of heaven*. Language is only the instrument of science, and words are but the signs of ideas: I wish, however, that the instrument might be less apt to decay, and that signs might be permanent, like the things which they denote.

In settling the orthography, I have not wholly neglected the pronunciation, which I have directed, by printing an accent upon the acute or elevated syllable. It will sometimes be found, that the accent is placed by the author quoted, on a different syllable from that marked in the alphabetical series; it is then to be understood, that custom has varied, or that the author has, in my opinion, pronounced wrong. Short directions are sometimes given where the sound of letters is irregular; and if they are sometimes omitted, defect in such minute observations will be more easily excused, than superfluity.

In the investigation both of the orthography and signification of words, their Etymology was necessarily to be considered, and they were therefore to be divided into primitives and derivatives. A primitive word is that which can be traced no further to any English root; thus *circumspect, circumvent, circumstance, delude, concave, and complicate*, though compounds in the Latin, are to us primitives. Deriva-

tives, are all those that can be referred to any word in English of greater simplicity.

The derivatives I have referred to their primitives, with an accuracy sometimes needless; for who does not see that *remoteness* comes from *remote*, *lovely* from *love*, *concavity* from *concave*, and *demonstrative* from *demonstrate*? But this grammatical exuberance the scheme of my work did not allow me to repress. It is of great importance, in examining the general fabric of a language, to trace one word from another; by noting the usual modes of derivation and inflection; and uniformity must be preserved in systematical works, though sometimes at the expence of particular propriety.

Among other derivatives I have been careful to insert and elucidate the anomalous plurals of nouns and preterites of verbs, which in the Teutonic dialects are very frequent, and, though familiar to those who have always used them, interrupt and embarrass the learners of our language.

The two languages from which our primitives have been derived are the Roman and the Teutonic: under the Roman I comprehend the French and provincial tongues; and under the Teutonic range the Saxon, German, and all their kindred dialects. Most of our polysyllables are Roman, and our words of one syllable are very often Teutonic.

In assigning the Roman original, it has perhaps sometimes happened that I have mentioned only the Latin, when the word was borrowed from the French; and considering myself as employed only in the illustration of my own language, I have not been very careful to observe whether the Latin word be

pure or barbarous, or the French elegant or obsolete.

For the Teutonic etymologies, I am commonly indebted to Junius and Skinner, the only names which I have forborne to quote when I copied their books; not that I might appropriate their labours or usurp their honours, but that I might spare a perpetual repetition by one general acknowledgment. Of these, whom I ought not to mention but with the reverence due to instructors and benefactors, Junius appears to have excelled in extent of learning, and Skinner in rectitude of understanding. Junius was accurately skilled in all the northern languages, Skinner probably examined the ancient and remoter dialects only by occasional inspection into dictionaries; but the learning of Junius is often of no other use than to shew him a track by which he may deviate from his purpose, to which Skinner always presses forward by the shortest way. Skinner is often ignorant, but never ridiculous: Junius is always full of knowledge; but his variety distracts his judgment, and his learning is very frequently disgraced by his absurdities.

The votaries of the northern muses will not perhaps easily restrain their indignation, when they find the name of Junius thus degraded by a disadvantageous comparison; but whatever reverence is due to his diligence, or his attainments, it can be no criminal degree of censoriousness to charge that etymologist with want of judgment, who can seriously derive *dream* from *drama*, because *life is a drama, and a drama is a dream*; and who declares with a tone of defiance, that no man can fail to derive

moan from *μονος*, *monos*, *single* or *solitary*, who considers that grief naturally loves to be alone*.

Our knowledge of the northern literature is so scanty, that of words undoubtedly Teutonic, the original is not always to be found in any ancient lan-

* That I may not appear to have spoken too irreverently of Junius, I have here subjoined a few specimens of his etymological extravagance.

BANISH, *religare, ex banno vel territorio exigere, in exilium agere*. G. *bannir*. It. *bandire, bandeggiare*. H. *bandir*. B. *bannen*. Ævi mediæ scriptores *bannire* dicebant. V. Spelm. in *Bannum* & in *Banleuga*. Quoniam verò regionum urbiumq; limites arduis plerumq; montibus, altis fluminibus, longis deniq; flexuosisq; angustissimarum viarum amfractibus includebantur, fieri potest id genus limites *ban* dici ab eo quod *βαννάται* & *βάννατροι* Tarentinis olim, sicuti tradit Hesychius, vocabantur *αι λοξοι και μη ιδουτενεῖς ἔδοι*, “obliquæ ac minimè in rectum tendentes viæ.” Ac fortasse quoque huc facit quod *βανῆς*, eodem Hesychio teste, dicebant *ἄρη στραγγύλη*, montes arduos.

EMPTY, *emptie, vacuus, inanis*. A. S. *Æmtiz* Nescio an sint ab *ἐμίω* vel *εμίαιω*. Vomō, evomō, vomitu evacuo. Videtur interim etymologiam hanc non obscurè firmare codex Rush. Mat. xii. 22. ubi antiquè scriptum invenimus *ζεμοετες ηιτ εμετιζ*. “Invenit eam vacantem.”

HILL, *mons, collis*. A. S. *hýll*. Quod videri potest abscissum ex *κολώνη* vel *κολωνός*. Collis, tumulus, locus in plano editor. Hom. Il. b. v. 811. *ἔσι δέ τις προπάροιθε πόλεος ἀικπιῖα κολώνη*. Ubi auctori brevium scholiorum *κολώνη* exp. *τόπος εις ὕψος ὑνῆκων, γεώλοφος ἰξοχή*.

NAP, *to take a nap. Dormire, condormiscere*. Cym. *heppian*. A. S. *hnæppan*. Quod postremum videri potest desumptum ex *κνίφαις*, obscuritas, tenebræ: nihil enim æque solet conciliare somnum, quàm caliginosa profundæ noctis obscuritas.

STAMMERER, *Balbus, blæsus*. Goth. STAMMS. A. S. *ꝥtamer, ꝥtamer*. D. *stam*. B. *stameler*. Su. *stamma*. Isl. *stamr*. Sunt a *σωμυλλειν* vel *σωμύλλειν*, nimîa loquacitate alios offendere; quod impedite loquentes libentissimè garrere soleant; vel quòd aliis nimîi semper videantur, etiam parcellissimè loquentes.

guage ; and I have therefore inserted Dutch or German substitutes, which I consider not as radical, but parallel, not as the parents, but sisters of the English.

The words which are represented as thus related by descent or cognation, do not always agree in sense ; for it is incident to words, as to their authors, to degenerate from their ancestors, and to change their manners when they change their country. It is sufficient, in etymological inquiries, if the senses of kindred words be found such as may easily pass into each other, or such as may both be referred to one general idea.

The etymology, so far as it is yet known, was easily found in the volumes, where it is particularly and professedly delivered ; and, by proper attention to the rules of derivation, the orthography was soon adjusted. But to *collect* the *Words* of our language was a task of greater difficulty : the deficiency of dictionaries was immediately apparent ; and when they were exhausted, what was yet wanting must be sought by fortuitous and unguided excursions into books, and gleaned as industry should find, or chance should offer it, in the boundless chaos of a living speech. My search, however, has been either skilful or lucky ; for I have much augmented the vocabulary.

As my design was a dictionary, common or appellative, I have omitted all words which have relation to proper names ; such as *Arian*, *Socinian*, *Calvinist*, *Benedictine*, *Mahometan* ; but have retained those of a more general nature, as *Heathen*, *Pagan*.

Of the terms of art, I have received such as could be found either in books of science or technical dictionaries; and have often inserted, from philosophical writers, words which are supported perhaps only by a single authority, and which being not admitted into general use, stand yet as candidates or probationers, and must depend for their adoption on the suffrage of futurity.

The words which our authors have introduced by their knowledge of foreign languages, or ignorance of their own, by vanity or wantonness, by compliance with fashion or lust of innovation, I have registered as they occurred, though commonly only to censure them, and warn others against the folly of naturalizing useless foreigners to the injury of the natives.

I have not rejected any by design, merely because they were unnecessary or exuberant; but have received those which by different writers have been differently formed, as *viscid*, and *viscidity*, *viscous*, and *viscosity*.

Compounded or double words I have seldom noted, except when they obtain a signification different from that which the components have in their simple state. Thus *highwayman*, *woodman*, and *horsecourser*, require an explanation; but of *thieflike* or *coachdriver* no notice was needed, because the primitives contain the meaning of the compounds.

Words arbitrarily-formed by a constant and settled analogy, like diminutive adjectives in *ish*, as *greenish*, *bluish*; adverbs in *ly*, as *dully*, *openly*; substantives in *ness*, as *vileness*, *faultiness*; were less diligently sought, and many sometimes have been omitted, when

I had no authority that invited me to insert them ; not that they are not genuine and regular offsprings of English roots, but because their relation to the primitive being always the same, their signification cannot be mistaken.

The verbal nouns in *ing*, such as the *keeping* of the *castle*, the *leading* of the *army*, are always neglected, or placed only to illustrate the sense of the verb, except when they signify things as well as actions, and have therefore a plural number, as *dwelling*, *living* ; or have an absolute and abstract signification, as *colouring*, *painting*, *learning*.

The participles are likewise omitted, unless, by signifying rather habit or quality than action, they take the nature of adjectives ; as a *thinking* man, a man of prudence ; a *padding* horse, a horse that can pace : these I have ventured to call *participial adjectives*. But neither are these always inserted, because they are commonly to be understood, without any danger of mistake, by consulting the verb.

Obsolete words are admitted, when they are found in authors not obsolete, or when they have any force or beauty that may deserve revival.

As composition is one of the chief characteristics of a language, I have endeavoured to make some reparation for the universal negligence of my predecessors, by inserting great numbers of compounded words, as may be found under *after*, *fore*, *new*, *night*, *fair*, and many more. These, numerous as they are, might be multiplied, but that use and curiosity are here satisfied, and the frame of our language and modes of our combination amply discovered.

Of some forms of composition, such as that by which *re* is prefixed to note *repetition*, and *un* to signify *contrariety* or *privation*, all the examples cannot be accumulated, because the use of these particles, if not wholly arbitrary, is so little limited, that they are hourly affixed to new words as occasion requires, or is imagined to require them.

There is another kind of composition more frequent in our language than perhaps in any other, from which arises to foreigners the greatest difficulty. We modify the signification of many verbs by a particle subjoined; as to *come off*, to escape by a fetch; to *fall on*, to attack; to *fall off*, to apostatize; to *break off*, to stop abruptly; to *bear out*, to justify; to *fall in*, to comply; to *give over*, to cease; to *set off*, to embellish; to *set in*, to begin a continual tenor; to *set out*, to begin a course or journey; to *take off*, to copy; with innumerable expressions of the same kind, of which some appear wildly irregular, being so far distant from the sense of the simple words, that no sagacity will be able to trace the steps by which they arrived at the present use. These I have noted with great care; and though I cannot flatter myself that the collection is complete, I believe I have so far assisted the students of our language, that this kind of phraseology will be no longer insuperable; and the combinations of verbs and particles, by chance omitted, will be easily explained by comparison with those that may be found.

Many words yet stand supported only by the [name of Bailey, Ainsworth, Philips, or the contracted *Dict.* for *Dictionaries* subjoined; of these I am not always certain that they are read in any book but the works

of lexicographers. Of such I have omitted many, because I had never read them; and many I have inserted, because they may perhaps exist, though they have escaped my notice: they are, however, to be yet considered as resting only upon the credit of former dictionaries. Others, which I considered as useful, or know to be proper, though I could not at present support them by authorities, I have suffered to stand upon my own attestation, claiming the same privilege with my predecessors, of being sometimes credited without proof.

The words, thus selected and disposed, are grammatically considered; they are referred to the different parts of speech; traced, when they are irregularly inflected, through their various terminations; and illustrated by observations, not indeed of great or striking importance, separately considered, but necessary to the elucidation of our language, and hitherto neglected or forgotten by English grammarians.

That part of my work on which I expect malignity most frequently to fasten, is the *explanation*; in which I cannot hope to satisfy those, who are perhaps not inclined to be pleased, since I have not always been able to satisfy myself. To interpret a language by itself is very difficult; many words cannot be explained by synonymes, because the idea signified by them has not more than one appellation; nor by paraphrase, because simple ideas cannot be described. When the nature of things is unknown, or the notion unsettled and indefinite, and various in various minds, the words, by which such notions are conveyed, or such things denoted, will be am-

biguous and perplexed. And such is the fate of hapless lexicography, that not only darkness, but light, impedes and distresses it; things may be not only too little, but too much known, to be happily illustrated. To explain, requires the use of terms less abstruse than that which is to be explained, and such terms cannot always be found; for as nothing can be proved but by supposing something intuitively known, and evident without proof, so nothing can be defined but by the use of words too plain to admit a definition.

Other words there are, of which the sense is too subtle and evanescent to be fixed in a paraphrase; such are all those which are by the grammarians termed *expletives*, and, in dead languages, are suffered to pass for empty sounds, of no other use than to fill a verse, or to modulate a period, but which are easily perceived in living tongues to have power and emphasis, though it be sometimes such as no other form of expression can convey.

My labour has likewise been much increased by a class of verbs too frequent in the English language, of which the signification is so loose and general, the use so vague and indeterminate, and the senses deformed so widely from the first idea, that it is hard to trace them through the maze of variation, to catch them on the brink of utter inanity, to circumscribe them by any limitations, or interpret them by any words of distinct and settled meaning; such are *bear, break, come, cast, full, get, give, do, put, set, go, run, make, take, turn, throw*. If of these the whole power is not accurately delivered, it must be remembered, that while our language is yet living,

and variable by the caprice of every one that speaks it, these words are hourly shifting their relations, and can no more be ascertained in a dictionary, than a grove, in the agitation of a storm, can be accurately delineated from its picture in the water.

The particles are among all nations applied with so great latitude, that they are not easily reducible under any regular scheme of explication: this difficulty is not less, nor perhaps greater, in English, than in other languages. I have laboured them with diligence, I hope with success; such at least as can be expected in a task, which no man, however learned or sagacious, has yet been able to perform.

Some words there are which I cannot explain, because I do not understand them; these might have been omitted very often with little inconvenience, but I would not so far indulge my vanity as to decline this confession: for when Tully owns himself ignorant whether *lessus*, in the twelve tables, means a *funeral song*, or *mourning garment*; and Aristotle doubts whether *οὔρευς*, in the Iliad, signifies a *mule*, or *muleteer*, I may surely, without shame, leave some obscurities to happier industry, or future information.

The rigour of interpretative lexicography requires that *the explanation, and the word explained, should be always reciprocal*; this I have always endeavoured, but could not always attain. Words are seldom exactly synonymous; a new term was not introduced, but because the former was thought inadequate: names, therefore, have often many ideas, but few ideas have many names. It was then necessary to use the proximate word, for the deficiency of single

terms can very seldom be supplied by circumlocution; nor is the inconvenience great of such mutilated interpretations, because the sense may easily be collected entire from the examples.

In every word of extensive use, it was requisite to mark the progress of its meaning, and shew by what gradations of intermediate sense it has passed from its primitive to its remote and accidental signification; so that every foregoing explanation should tend to that which follows, and the series be regularly concatenated from the first notion to the last.

This is specious, but not always practicable; kindred senses may be so interwoven; that the perplexity cannot be disentangled, nor any reason be assigned why one should be ranged before the other. When the radical idea branches out into parallel ramifications, how can a consecutive series be formed of senses in their nature collateral? The shades of meaning sometimes pass imperceptibly into each other, so that though on one side they apparently differ, yet it is impossible to mark the point of contact. Ideas of the same race, though not exactly alike, are sometimes so little different, that no words can express the dissimilitude, though the mind easily perceives it, when they are exhibited together; and sometimes there is such a confusion of acceptations, that discernment is wearied, and distinction puzzled; and perseverance herself hurries to an end by crowding together what she cannot separate.

These complaints of difficulty will by those that have never considered words beyond their popular use, be thought only the jargon of a man willing to magnify his labours, and procure veneration to his

studies by involution and obscurity. But every art is obscure to those that have not learned it: this uncertainty of terms, and commixture of ideas, is well known to those who have joined philosophy with grammar; and if I have not expressed them very clearly, it must be remembered that I am speaking of that which words are insufficient to explain.

The original sense of words is often driven out of use by their metaphorical acceptations, yet must be inserted for the sake of a regular origination. Thus I know not whether *ardour* is used for *material heat*, or whether *flagrant*, in English, ever signifies the same with *burning*; yet such are the primitive ideas of these words, which are therefore set first, though without examples, that the figurative senses may be commodiously deduced.

Such is the exuberance of signification which many words have obtained, that it was scarcely possible to collect all their senses; sometimes the meaning of derivatives must be sought in the mother term, and sometimes deficient explanations of the primitive may be supplied in the train of derivation. In any case of doubt or difficulty, it will be always proper to examine all the words of the same race; for some words are slightly passed over to avoid repetition, some admitted easier and clearer explanation than others, and all will be better understood, as they are considered in greater variety of structures and relations.

All the interpretations of words are not written with the same skill, or the same happiness: things equally easy in themselves, are not allequally easy to any single mind. Every writer of a long work

commits errors, where there appears neither ambiguity to mislead, nor obscurity to confound him; and in a search like this, many felicities of expression will be casually overlooked, many convenient parallels will be forgotten, and many particulars will admit improvement from a mind utterly unequal to the whole performance.

But many seeming faults are to be imputed rather to the nature of the undertaking, than the negligence of the performer. Thus some explanations are unavoidably reciprocal or circular, as *hind, the female of the stag; stag, the male of the hind*: sometimes easier words are changed into harder, as *burial* into *sepulture* or *interment*, *drier* into *desiccative*, *dryness* into *siccidity* or *aridity*, *fit* into *paroxysm*; for the easiest word, whatever it be, can never be translated into one more easy. But easiness and difficulty are merely relative; and if the present prevalence of our language should invite foreigners to this Dictionary, many will be assisted by those words which now seem only to increase or produce obscurity. For this reason I have endeavoured frequently to join a Teutonic and Roman interpretation, as to *cheer*, to *gladden*, or *exhilarate*, that every learner of English may be assisted by his own tongue.

The solution of all difficulties, and the supply of all defects, must be sought in the examples, subjoined to the various senses of each word, and ranged according to the time of their authors.

When I first collected these authorities, I was desirous that every quotation should be useful to some other end than the illustration of a word; I therefore extracted from philosophers principles of

science; from historians remarkable facts; from chymists complete processes; from divines striking exhortations; and from poets beautiful descriptions. Such is design, while it is yet at a distance from execution. When the time called upon me to range this accumulation of elegance and wisdom into an alphabetical series, I soon discovered that the bulk of my volumes would fright away the student, and was forced to depart from my scheme of including all that was pleasing or useful in English literature, and reduce my transcripts very often to clusters of words, in which scarcely any meaning is retained; thus to the weariness of copying, I was condemned to add the vexation of expunging. Some passages I have yet spared, which may relieve the labour of verbal searches, and intersperse with verdure and flowers the dusty deserts of barren philology.

The examples, thus mutilated, are no longer to be considered as conveying the sentiments or doctrine of their authors; the word for the sake of which they are inserted, with all its appendant clauses, has been carefully preserved; but it may sometimes happen, by hasty detruncation, that the general tendency of the sentence may be changed: the divine may desert his tenets, or the philosopher his system.

Some of the examples have been taken from writers who were never mentioned as masters of elegance, or models of style; but words must be sought where they are used; and in what pages, eminent for purity, can terms of manufacture or agriculture be found? Many quotations serve no

other purpose than that of proving the bare existence of words, and are therefore selected with less scrupulousness than those which are to teach their structures and relations.

My purpose was to admit no testimony of living authors, that I might not be misled by partiality, and that none of my cotemporaries might have reason to complain; nor have I departed from this resolution, but when some performance of uncommon excellence excited my veneration, when my memory supplied me, from late books, with an example that was wanting, or when my heart, in the tenderness of friendship, solicited admission for a favourite name.

So far have I been from any care to grace my pages with modern decorations, that I have studiously endeavoured to collect examples and authorities from the writers before the restoration, whose works I regard as the *wells of English undefiled*, as the pure sources of genuine diction. Our language, for almost a century, has, by the concurrence of many causes, been gradually departing from its original Teutonic character, and deviating towards a Gallic structure and phraseology, from which it ought to be our endeavour to recal it, by making our ancient volumes the ground-work of style, admitting among the additions of later times, only such as may supply real deficiencies, such as are readily adopted by the genius of our tongue, and incorporate easily with our native idioms.

But as every language has a time of rudeness antecedent to perfection, as well as of false refinement and declension, I have been cautious lest my zeal for antiquity might drive me into times too remote,

and crowd my book with words now no longer understood. I have fixed Sidney's work for the boundary, beyond which I make few excursions. From the authors which rose in the time of Elizabeth, a speech might be formed adequate to all the purposes of use and elegance. If the language of theology were extracted from Hooker and the translation of the Bible; the terms of natural knowledge from Bacon; the phrases of policy, war, and navigation from Raleigh; the dialect of poetry and fiction from Spenser and Sidney; and the diction of common life from Shakespeare, few ideas would be lost to mankind, for want of English words, in which they might be expressed.

It is not sufficient that a word is found, unless it be so combined as that its meaning is apparently determined by the tract and tenor of the sentence; such passages I have therefore chosen, and when it happened that any author gave a definition of a term, or such an explanation as is equivalent to a definition, I have placed his authority as a supplement to my own, without regard to the chronological order, that is otherwise observed.

Some words, indeed, stand unsupported by any authority, but they are commonly derivative nouns or adverbs, formed from their primitives by regular and constant analogy, or names of things seldom occurring in books, or words of which I have reason to doubt the existence.

There is more danger of censure from the multiplicity than paucity of examples; authorities will sometimes seem to have been accumulated without necessity or use, and perhaps some will be found, which might, without loss, have been omitted.

But a work of this kind is not hastily to be charged with superfluities: those quotations, which to careless or unskilful perusers appear only to repeat the same sense, will often exhibit, to a more accurate examiner, diversities of signification, or, at least, afford different shades of the same meaning: one will shew the word applied to persons, another to things; one will express an ill, another a good, and a third a neutral sense; one will prove the expression genuine from an ancient author; another will shew it elegant from a modern: a doubtful authority is corroborated by another of more credit; an ambiguous sentence is ascertained by a passage clear and determinate: the word, how often soever repeated, appears with new associates and in different combinations, and every quotation contributes something to the stability or enlargement of the language.

When words are used equivocally, I receive them in either sense; when they are metaphorical, I adopt them in their primitive acceptation.

I have sometimes, though rarely, yielded to the temptation of exhibiting a genealogy of sentiments, by shewing how one author copied the thoughts and diction of another: such quotations are indeed little more than repetitions, which might justly be censured, did they not gratify the mind, by affording a kind of intellectual history.

The various syntactical structures occurring in the examples have been carefully noted; the licence or negligence with which many words have been hitherto used, has made our style capricious and indeterminate; when the different combinations of the same word are exhibited together, the preference is

readily given to propriety, and I have often endeavoured to direct the choice.

Thus have I laboured by settling the orthography, displaying the analogy, regulating the structures, and ascertaining the signification of English words, to perform all the parts of a faithful lexicographer: but I have not always executed my own scheme, or satisfied my own expectations. The work, whatever proofs of diligence and attention it may exhibit, is yet capable of many improvements: the orthography which I recommend is still controvertible; the etymology which I adopt is uncertain, and perhaps frequently erroneous; the explanations are sometimes too much contracted, and sometimes too much diffused, the significations are distinguished rather with subtilty than skill, and the attention is harassed with unnecessary minuteness.

The examples are too often injudiciously truncated, and perhaps sometimes, I hope very rarely, alleged in a mistaken sense; for in making this collection I trusted more to memory, than, in a state of disquiet and embarrassment, memory can contain, and purposed to supply at the review what was left incomplete in the first transcription.

Many terms appropriated to particular occupations, though necessary and significant, are undoubtedly omitted; and of the words most studiously considered and exemplified, many senses have escaped observation.

Yet these failures, however frequent, may admit extenuation and apology. To have attempted much is always laudable, even when the enterprise

is above the strength that undertakes it: To rest below his own aim is incident to every one whose fancy is active, and whose views are comprehensive; nor is any man satisfied with himself because he has done much, but because he can conceive little. When first I engaged in this work, I resolved to leave neither words nor things unexamined, and pleased myself with a prospect of the hours which I should revel away in feasts of literature, the obscure recesses of northern learning which I should enter and ransack, the treasures with which I expected every search into those neglected mines to reward my labour, and the triumph with which I should display my acquisitions to mankind. When I had thus inquired into the original of words, I resolved to shew likewise my attention to things; to pierce deep into every science, to inquire the nature of every substance of which I inserted the name, to limit every idea by a definition strictly logical, and exhibit every production of art or nature in an accurate description, that my book might be in place of all other dictionaries whether appellative or technical. But these were the dreams of a poet doomed at last to wake a lexicographer. I soon found that it is too late to look for instruments, when the work calls for execution, and that whatever abilities I had brought to my task, with those I must finally perform it. To deliberate whenever I doubted, to inquire whenever I was ignorant, would have protracted the undertaking without end, and, perhaps, without much improvement; for I did not find by my first experiments, that what I had not of my own

was easily to be obtained: I saw that one inquiry only gave occasion to another, that book referred to book, that to search was not always to find, and to find was not always to be informed; and that thus to pursue perfection, was, like the first inhabitants of Arcadia, to chase the sun, which, when they had reached the hill where he seemed to rest, was still beheld at the same distance from them.

I then contracted my design, determining to confide in myself, and no longer to solicit auxiliaries, which produced more incumbrance than assistance; by this I obtained at least one advantage, that I set limits to my work, which would in time be ended, though not completed.

Despondency has never so far prevailed as to depress me to negligence; some faults will at last appear to be the effects of anxious diligence and persevering activity. The nice and subtle ramifications of meaning were not easily avoided by a mind intent upon accuracy, and convinced of the necessity of disentangling combinations, and separating similitudes. Many of the distinctions which to common readers appear useless and idle, will be found real and important by men versed in the school philosophy, without which no dictionary can ever be accurately compiled, or skilfully examined.

Some senses however there are, which, though not the same, are yet so nearly allied, that they are often confounded. Most men think indistinctly, and therefore cannot speak with exactness; and consequently some examples might be indifferently put to either signification: this uncertainty is not to be imputed to me, who do not form, but register the

language; who do not teach men how they should think, but relate how they have hitherto expressed their thoughts.

The imperfect sense of some examples I lamented, but could not remedy, and hope they will be compensated by innumerable passages selected with propriety, and preserved with exactness; some shining with sparks of imagination, and some replete with treasures of wisdom.

The orthography and etymology, though imperfect, are not imperfect for want of care, but because care will not always be successful, and recollection or information come too late for use.

That many terms of art and manufacture are omitted, must be frankly acknowledged; but for this defect I may boldly allege that it was unavoidable: I could not visit caverns to learn the miner's language, nor take a voyage to perfect my skill in the dialect of navigation, nor visit the warehouses of merchants, and shops of artificers, to gain the names of wares, tools and operations, of which no mention is found in books; what favourable accident, or easy inquiry brought within my reach, has not been neglected; but it had been a hopeless labour to glean up words, by courting living information, and contesting with the sullenness of one, and the roughness of another

To furnish the academicians *della Crusca* with words of this kind, a series of comedies called *la Fiera*, or *the Fair*, was professedly written by Buonaroti; but I had no such assistant, and therefore was content to want what they must have wanted likewise, had they not luckily been so supplied.

Nor are all words which are not found in the vocabulary, to be lamented as omissions. Of the laborious and mercantile part of the people, the diction is in a great measure casual and mutable; many of their terms are formed for some temporary or local convenience, and though current at certain times and places, are in others utterly unknown. This fugitive cant, which is always in a state of increase or decay, cannot be regarded as any part of the durable materials of a language, and therefore must be suffered to perish with other things unworthy of preservation.

Care will sometimes betray to the appearance of negligence. He that is catching opportunities which seldom occur, will suffer those to pass by unregarded, which he expects hourly to return; he that is searching for rare and remote things, will neglect those that are obvious and familiar: thus many of the most common and cursory words have been inserted with little illustration, because in gathering the authorities, I forebore to copy those which I thought likely to occur whenever they were wanted. It is remarkable that, in reviewing my collection, I found the word *sea* unexemplified.

Thus it happens, that in things difficult there is danger from ignorance, and in things easy from confidence; the mind, afraid of greatness, and disdainful of littleness, hastily withdraws herself from painful searches, and passes with scornful rapidity over tasks not adequate to her powers, sometimes too secure for caution, and again too anxious for vigorous effort; sometimes idle in a plain path, and sometimes

distracted in labyrinths, and dissipated by different intentions.

A large work is difficult because it is large, even though all its parts might singly be performed with facility; where there are many things to be done, each must be allowed its share of time and labour, in the proportion only which it bears to the whole; nor can it be expected, that the stones which form the dome of a temple, should be squared and polished like the diamond of a ring.

Of the event of this work, for which, having laboured it with so much application, I cannot but have some degree of parental fondness, it is natural to form conjectures. Those who have been persuaded to think well of my design, will require that it should fix our language, and put a stop to those alterations which time and chance have hitherto been suffered to make in it without opposition. With this consequence I will confess that I flattered myself for a while; but now begin to fear that I have indulged expectation which neither reason nor experience can justify. When we see men grow old and die at a certain time one after another, from century to century, we laugh at the elixir that promises to prolong life to a thousand years; and with equal justice may the lexicographer be derided, who being able to produce no example of a nation that has preserved their words and phrases from mutability, shall imagine that his dictionary can embalm his language, and secure it from corruption and decay, that it is in his power to change sublunary nature, and clear the world at once from folly, vanity, and affectation.

With this hope, however, academies have been instituted, to guard the avenues of their languages, to retain fugitives, and repulse intruders; but their vigilance and activity have hitherto been vain; sounds are too volatile and subtile for legal restraints; to enchain syllables, and to lash the wind, are equally the undertakings of pride, unwilling to measure its desires by its strength. The French language has visibly changed under the inspection of the academy; the style of Amelot's translation of Father Paul is observed by Le Courayer to be *un peu passé*; and no Italian will maintain, that the diction of any modern writer is not perceptibly different from that of Boccace, Machiavel, or Caro.

Total and sudden transformations of a language seldom happen; conquests and migrations are now very rare: but there are other causes of change, which, though slow in their operation, and invisible in their progress, are perhaps as much superior to human resistance, as the revolutions of the sky, or intumescence of the tide. Commerce, however necessary, however lucrative, as it depraves the manners, corrupts the language; they that have frequent intercourse with strangers, to whom they endeavour to accommodate themselves, must in time learn a mingled dialect, like the jargon which serves the traffickers on the Mediterranean and Indian coasts. This will not always be confined to the exchange, the warehouse, or the port, but will be communicated by degrees to other ranks of the people, and be at last incorporated with the current speech.

There are likewise internal causes equally forcible. The language most likely to continue long without

alteration, would be that of a nation raised a little, and but a little, above barbarity, secluded from strangers, and totally employed in procuring the conveniences of life ; either without books, or, like some of the Mahometan countries, with very few : men thus busied and unlearned, having only such words as common use requires, would perhaps long continue to express the same notions by the same signs. But no such constancy can be expected in a people polished by arts, and classed by subordination, where one part of the community is sustained and accommodated by the labour of the other. Those who have much leisure to think, will always be enlarging the stock of ideas ; and every increase of knowledge, whether real or fancied, will produce new words, or combinations of words. When the mind is unchained from necessity, it will range after convenience ; when it is left at large in the fields of speculation, it will shift opinions ; as any custom is disused, the words that expressed it must perish with it ; as any opinion grows popular, it will innovate speech in the same proportion as it alters practice.

As by the cultivation of various sciences, a language is amplified, it will be more furnished with words deflected from their original sense ; the geometrician will talk of a coutier's zenith, or the eccentric virtue of a wild hero, and the physician of sanguine expectations and phlegmatic delays. Copiousness of speech will give opportunities to capricious choice, by which some words will be preferred, and others degraded ; vicissitudes of fashion will enforce the use of new, or extend the signification of known terms. The tropes of poetry will

make hourly encroachments, and the metaphorical will become the current sense : pronunciation will be varied by levity or ignorance, and the pen must at length comply with the tongue ; illiterate writers will, at one time or other, by public infatuation, rise into renown, who, not knowing the original import of words, will use them with colloquial licentiousness, confound distinction, and forget propriety. As politeness increases, some expressions will be considered as too gross and vulgar for the delicate, others as too formal and ceremonious for the gay and airy ; new phrases are therefore adopted, which must, for the same reasons, be in time dismissed. Swift, in his petty treatise on the English language, allows that new words must sometimes be introduced, but proposes that none should be suffered to become obsolete. But what makes a word obsolete, more than general agreement to forbear it ? and how shall it be continued, when it conveys an offensive idea, or recalled again into the mouths of mankind, when it has once become unfamiliar by disuse, and unpleasing by unfamiliarity ?

There is another cause of alteration more prevalent than any other, which yet in the present state of the world cannot be obviated. A mixture of two languages will produce a third distinct from both, and they will always be mixed, where the chief parts of education, and the most conspicuous accomplishment, is skill in ancient or in foreign tongues. He that has long cultivated another language, will find its words and combinations crowd upon his memory ; and haste and negligence, refinement and affectation,

will obtrude borrowed terms and exotic expressions.

The great pest of speech is frequency of translation. No book was ever turned from one language into another, without imparting something of its native idiom ; this is the most mischievous and comprehensive innovation ; single words may enter by thousands, and the fabric of the tongue continue the same ; but new phraseology changes much at once ; it alters not the single stones of the building, but the order of the columns. If an academy should be established for the cultivation of our style ; which I, who can never wish to see dependence multiplied, hope the spirit of English liberty will hinder or destroy, let them, instead of compiling grammars and dictionaries, endeavour, with all their influence, to stop the licence of translators, whose idleness and ignorance, if it be suffered to proceed, will reduce us to babble a dialect of France.

If the changes that we fear be thus irresistible, what remains but to acquiesce with silence, as in the other insurmountable distresses of humanity ? It remains that we retard what we cannot repel, that we palliate what we cannot cure. Life may be lengthened by care, though death cannot be ultimately defeated : tongues, like governments, have a natural tendency to degeneration ; we have long preserved our constitution, let us make some struggles for our language.

In hope of giving longevity to that which its own nature forbids to be immortal, I have devoted this book, the labour of years, to the honour of my

country, that we may no longer yield the palm of philology, without a contest, to the nations of the continent. The chief glory of every people arises from its authors: whether I shall add any thing by my own writings to the reputation of English literature, must be left to time: much of my life has been lost under the pressures of disease; much has been trifled away; and much has always been spent in provision for the day that was passing over me; but I shall not think my employment useless or ignoble, if by my assistance foreign nations, and distant ages, gain access to the propagators of knowledge, and understand the teachers of truth; if my labours afford light to the repositories of science, and add celebrity to Bacon, to Hooker, to Milton, and to Boyle.

When I am animated by this wish, I look with pleasure on my book, however defective, and deliver it to the world with the spirit of a man that has endeavoured well. That it will immediately become popular I have not promised to myself: a few wild blunders, and risible absurdities, from which no work of such multiplicity was ever free, may for a time furnish folly with laughter, and harden ignorance into contempt; but useful diligence will at last prevail, and there never can be wanting some who distinguish desert; who will consider that no dictionary of a living tongue ever can be perfect, since, while it is hastening to publication, some words are budding, and some falling away; that a whole life cannot be spent upon syntax and etymology, and that even a whole life would not be sufficient; that he, whose design includes whatever language can express, must often speak of what he does not un-

derstand; that a writer will sometimes be hurried by eagerness to the end, and sometimes faint with weariness under a task, which Scaliger compares to the labours of the anvil and the mine; that what is obvious is not always known, and what is known is not always present; that sudden fits of inadvertency will surprise vigilance, slight avocations will seduce attention, and casual eclipses of the mind will darken learning; and that the writer shall often in vain trace his memory at the moment of need, for that which yesterday he knew with intuitive readiness, and which will come uncalled into his thoughts tomorrow.

In this work, when it shall be found that much is omitted, let it not be forgotten that much likewise is performed; and though no book was ever spared out of tenderness to the author, and the world is little solicitous to know whence proceed the faults of that which it condemns; yet it may gratify curiosity to inform it, that the *English Dictionary* was written with little assistance of the learned, and without any patronage of the great; not in the soft obscurities of retirement, or under the shelter of academic bowers, but amidst inconvenience and distraction, in sickness and in sorrow. It may repress the triumph of malignant criticism to observe, that if our language is not here fully displayed, I have only failed in an attempt which no human powers have hitherto completed. If the lexicons of ancient tongues, now immutably fixed, and comprised in a few volumes, be yet, after the toil of successive ages, inadequate and delusive; if the aggregated knowledge, and co-operating diligence of the Italian aca-

demicians, did not secure them from the censure of Beni; if the embodied critics of France, when fifty years had been spent upon their work, were obliged to change its œconomy, and give their second edition another form, I may surely be contented without the praise of perfection, which, if I could obtain, in this gloom of solitude, what would it avail me? I have protracted my work till most of those whom I wished to please have sunk into the grave, and success and miscarriage are empty sounds: I therefore dismiss it with frigid tranquillity, having little to fear or hope from censure or from praise.

PROPOSALS
FOR PRINTING THE
DRAMATIC WORKS
OF
WILLIAM SHAKESPEARE.

Printed in the Year 1756.

WHEN the works of Shakespeare are, after so many editions, again offered to the Public, it will doubtless be inquired, why Shakespeare stands in more need of critical assistance than any other of the English writers, and what are the deficiencies of the late attempts, which another editor may hope to supply?

The business of him that republishes an ancient book is, to correct what is corrupt, and to explain what is obscure. To have a text corrupt in many places, and in many doubtful, is, among the authors that have written since the use of types, almost peculiar to Shakespeare. Most writers, by publishing their own works, prevent all various readings, and preclude all conjectural criticism. Books indeed are sometimes published after the death of him who produced them; but they are better secured from corruption than these unfortunate compo-

sitions. They subsist in a single copy, written or revised by the author; and the faults of the printed volume can be only faults of one descent.

But of the works of Shakespeare the condition has been far different: he sold them, not to be printed, but to be played. They were immediately copied for the actors, and multiplied by transcript after transcript, vitiated by the blunders of the penman, or changed by the affectation of the player; perhaps enlarged to introduce a jest, or mutilated to shorten the representation; and printed at last without the concurrence of the author, without the consent of the proprietor, from compilations made by chance or by stealth out of the separate parts written for the theatre; and thus thrust into the world surreptitiously and hastily, they suffered another depravation from the ignorance and negligence of the printers, as every man who knows the state of the press in that age will readily conceive.

It is not easy for invention to bring together so many causes concurring to vitiate the text. No other author ever gave up his works to fortune and time with so little care: no books could be left in hands so likely to injure them, as plays frequently acted, yet continued in manuscript: no other transcribers were likely to be so little qualified for their task as those who copied for the stage, at a time when the lower ranks of the people were universally illiterate: no other editions were made from fragments so minutely broken, and so fortuitously reunited; and in no other age was the art of printing in such unskilful hands.

With the causes of corruption that make the revival of Shakespeare's dramatic pieces necessary, may be enumerated the causes of obscurity, which may be partly imputed to his age, and partly to himself.

When a writer outlives his contemporaries, and remains almost the only unforgotten name of a distant time, he is necessarily obscure. Every age has its modes of speech, and its cast of thought; which though easily explained when there are many books to be compared with each other, become sometimes unintelligible, and always difficult, when there are no parallel passages that may conduce to their illustration. Shakespeare is the first considerable author of sublime or familiar dialogue in our language. Of the books which he read, and from which he formed his style, some perhaps have perished, and the rest are neglected. His imitations are therefore unnoted, his allusions are undiscovered, and many beauties, both of pleasantry and greatness, are lost with the objects to which they were united, as the figures vanish when the canvass has decayed.

It is the great excellence of Shakespeare, that he drew his scenes from nature, and from life. He copied the manners of the world then passing before him, and has more allusions than other poets to the traditions and superstition of the vulgar; which must therefore be traced before he can be understood.

He wrote at a time when our poetical language was yet unformed, when the meaning of our phrases was yet in fluctuation, when words were adopted at

pleasure from the neighbouring languages, and while the Saxon was still visibly mingled in our diction. The reader is therefore embarrassed at once with dead and with foreign languages, with obsolescence and innovation. In that age, as in all others, fashion produced phraseology, which succeeding fashion swept away before its meaning was generally known, or sufficiently authorized: and in that age, above all others, experiments were made upon our language, which distorted its combinations, and disturbed its uniformity.

If Shakespeare has difficulties above other writers, it is to be imputed to the nature of his work, which required the use of the common colloquial language, and consequently admitted many phrases allusive, elliptical, and proverbial, such as we speak and hear every hour without observing them; and of which, being now familiar, we do not suspect that they can ever grow uncouth, or that, being now obvious, they can ever seem remote.

These are the principal causes of the obscurity of Shakespeare; to which might be added the fulness of idea, which might sometimes load his words with more sentiment than they could conveniently convey, and that rapidity of imagination which might hurry him to a second thought before he had fully explained the first. But my opinion is, that very few of his lines were difficult to his audience, and that he used such expressions as were then common, though the paucity of contemporary writers makes them now seem peculiar.

Authors are often praised for improvement, or blamed for innovation, with very little justice, by

those who read few other books of the same age. Addison himself has been so unsuccessful in enumerating the words with which Milton has enriched our language, as perhaps not to have named one of which Milton was the author; and Bentley has yet more unhappily praised him as the introducer of those elisions into English poetry, which had been used from the first essays of versification among us, and which Milton was indeed the last that practised.

Another impediment, not the least vexatious to the commentator, is the exactness with which Shakespeare followed his authors. Instead of dilating his thoughts into generalities, and expressing incidents with poetical latitude, he often combines circumstances unnecessary to his main design, only because he happened to find them together. Such passages can be illustrated only by him who has read the same story in the very book which Shakespeare consulted.

He that undertakes an edition of Shakespeare, has all these difficulties to encounter, and all these obstructions to remove.

The corruptions of the text will be corrected by a careful collation of the oldest copies, by which it is hoped that many restorations may yet be made: at least it will be necessary to collect and note the variation as materials for future critics; for it very often happens that a wrong reading has affinity to the right.

In this part all the present editions are apparently and intentionally defective. The critics did not so much as wish to facilitate the labour of those that followed them. The same books are still to be

compared ; the work that has been done, is to be done again ; and no single edition will supply the reader with a text on which he can rely as the best copy of the works of Shakespeare.

The edition now proposed will at least have this advantage over others. It will exhibit all the observable varieties of all the copies that can be found ; that, if the reader is not satisfied with the editor's determination, he may have the means of choosing better for himself.

Where all the books are evidently vitiated, and collation can give no assistance, then begins the task of critical sagacity : and some changes may well be admitted in a text never settled by the author, and so long exposed to caprice and ignorance. But nothing shall be imposed, as in the Oxford edition, without notice of the alteration ; nor shall conjecture be wantonly or unnecessarily indulged.

It has been long found, that very specious emendations do not equally strike all minds with conviction, nor even the same mind at different times ; and therefore, though perhaps many alterations may be proposed as eligible, very few will be obtruded as certain. In a language so ungrammatical as the English, and so licentious as that of Shakespeare, emendatory criticism is always hazardous ; nor can it be allowed to any man who is not particularly versed in the writings of that age, and particularly studious of his author's diction. There is danger lest peculiarities should be mistaken for corruptions, and passages rejected as unintelligible, which a narrow mind happens not to understand.

All the former critics have been so much employed on the correction of the text, that they have not sufficiently attended to the elucidation of passages obscured by accident or time. The editor will endeavour to read the books which the author read, to trace his knowledge to its source, and compare his copies with their originals. If in this part of his design he hopes to attain any degree of superiority to his predecessors, it must be considered, that he has the advantage of their labours; that part of the work being already done, more care is naturally bestowed on the other part; and that, to declare the truth, Mr. Rowe and Mr. Pope were very ignorant of the ancient English literature; Dr. Warburton was detained by more important studies; and Mr. Theobald, if fame be just to his memory, considered learning only as an instrument of gain, and made no further inquiry after his author's meaning, when once he had notes sufficient to embellish his page with the expected decorations.

With regard to obsolete or peculiar diction, the editor may perhaps claim some degree of confidence, having had more motives to consider the whole extent of our language than any other man from its first formation. He hopes that, by comparing the works of Shakespeare with those of writers who lived at the same time, immediately preceded, or immediately followed him, he shall be able to ascertain his ambiguities, disentangle his intricacies, and recover the meaning of words now lost in the darkness of antiquity.

When therefore any obscurity arises from an allusion to some other book, the passage will be quoted.

When the diction is entangled, it will be cleared by a paraphrase or interpretation. When the sense is broken by the suppression of part of the sentiment in pleasantry or passion, the connexion will be supplied. When any forgotten custom is hinted, care will be taken to retrieve and explain it. The meaning assigned to doubtful words will be supported by the authorities of other writers, or by parallel passages of Shakespeare himself.

The observation of faults and beauties is one of the duties of an annotator, which some of Shakespeare's editors have attempted, and some have neglected. For this part of his task, and for this only, was Mr. Pope eminently and indisputably qualified; nor has Dr. Warburton followed him with less diligence or less success. But I have never observed that mankind was much delighted or improved by their asterisks, commas, or double commas; of which the only effect is, that they preclude the pleasure of judging for ourselves, teach the young and ignorant to decide without principles; defeat curiosity and discernment, by leaving them less to discover; and at last shew the opinion of the critic, without the reasons on which it was founded, and without affording any light by which it may be examined.

The editor, though he may less delight his own vanity, will probably please his reader more, by supposing him equally able with himself to judge of beauties and faults, which require no previous acquisition of remote knowledge. A description of the obvious scenes of nature, a representation of general life, a sentiment of reflection or experience, a deduction of conclusive arguments, a forcible eruption of efferves-

cent passion, ^{beauties} are to be considered as proportionate to common apprehension, unassisted by critical officiousness; since, to convince them, nothing more is requisite than acquaintance with the general state of the world, and those faculties which he must always bring with him who would read Shakespeare.

But when the beauty arises from some adaptation of the sentiment to customs worn out of use, to opinions not universally prevalent, or to any accidental or minute particularity, which cannot be supplied by common understanding, or common observation, it is the duty of a commentator to lend his assistance.

The notice of beauties and faults thus limited, will make no distinct part of the design, being reducible to the explanation of obscure passages.

The editor does not however intend to preclude himself from the comparison of Shakespeare's sentiments or expression with those of ancient or modern authors, or from the display of any beauty not obvious to the students of poetry; for as he hopes to leave his author better understood, he wishes likewise to procure him more rational approbation.

The former editors have affected to slight their predecessors: but in this edition all that is valuable will be adopted from every commentator, that posterity may consider it as including all the rest, and exhibiting whatever is hitherto known of the great father of the English drama.

PREFACE

TO

SHAKESPEARE.

Published in the Year 1768

THAT praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those, who, being able to add nothing to truth, hope for eminence from the heresies of paradox; or those, who, being forced by disappointment upon consolatory expedients, are willing to hope from posterity what the present age refuses, and flatter themselves that the regard, which is yet denied by envy, will be at last bestowed by time.

Antiquity, like every other quality that attracts the notice of mankind, has undoubtedly votaries that reverence it, not from reason, but from prejudice. Some seem to admire indiscriminately whatever has been long preserved, without considering that time has sometimes co-operated with chance; all perhaps are more willing to honour

past than present excellence ; and the mind contemplates genius through the shades of age, as the eye surveys the sun through artificial opacity. The great contention of criticism is to find the faults of the moderns, and the beauties of the ancients. While an author is yet living, we estimate his powers by his worst performance ; and when he is dead, we rate them by his best.

To works, however, of which the excellence is not absolute and definite, but gradual and comparative ; to works not raised upon principles demonstrative and scientific, but appealing wholly to observation and experience, no other test can be applied than length of duration and continuance of esteem. What mankind have long possessed, they have often examined and compared ; and if they persist to value the possession, it is because frequent comparisons have confirmed opinion in its favour. As among the works of nature, no man can properly call a river deep, or a mountain high, without the knowledge of many mountains, and many rivers ; so, in the productions of genius, nothing can be styled excellent till it has been compared with other works of the same kind. Demonstration immediately displays its power, and has nothing to hope or fear from the flux of years ; but works tentative and experimental must be estimated by their proportion to the general and collective ability of man, as it is discovered in a long succession of endeavours. Of the first building that was raised, it might be with certainty determined that it was round or square ; but whether it was spacious or lofty must have been referred to time. The Pythagorean scale of numbers

was at once discovered to be perfect ; but the poems of Homer we yet know not to transcend the common limits of human intelligence, but by remarking, that nation after nation, and century after century, has been able to do little more than transpose his incidents, new-name his characters, and paraphrase his sentiments.

The reverence due to writings that have long subsisted, arises therefore not from any credulous confidence in the superior wisdom of past ages, or gloomy persuasion of the degeneracy of mankind, but is the consequence of acknowledged and indubitable positions, that what has been longest known has been most considered, and what is most considered is best understood.

The poet, of whose works I have undertaken the revision, may now begin to assume the dignity of an ancient, and claim the privilege of established fame and prescriptive veneration. He has long outlived his century, the term commonly fixed as the test of literary merit. Whatever advantages he might once derive from personal allusions, local customs, or temporary opinions, have for many years been lost ; and every topic of merriment, or motive of sorrow, which the modes of artificial life afforded him, now only obscure the scenes which they once illuminated. The effects of favour and competition are at an end ; the tradition of his friendships and his enmities has perished ; his works support no opinion with arguments, nor supply any faction with invectives ; they can neither indulge vanity, nor gratify malignity ; but are read without any other reason than the desire of pleasure, and are therefore praised only as

pleasure is obtained ; yet, thus unassisted by interest or passion, they have past through variations of taste and changes of manners, and, as they devolved from one generation to another, have received new honours at every transmission.

But because human judgment, though it be gradually gaining upon certainty, never becomes infallible ; and approbation, though long continued, may yet be only the approbation of prejudice or fashion ; it is proper to inquire, by what peculiarities of excellence Shakespeare has gained and kept the favour of his countrymen.

Nothing can please many, and please long, but just representations of general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight awhile, by that novelty of which the common satiety of life sends us all in quest ; but the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth.

Shakespeare is, above all writers, at least above all modern writers, the poet of nature ; the poet that holds up to his readers a faithful mirror of manners and of life. His characters are not modified by the customs of particular places, unpractised by the rest of the world ; by the peculiarities of studies or professions, which can operate but upon small numbers ; or by the accidents of transient fashions or temporary opinions : they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find. His persons act and speak by the influence of those general passions and

principles by which all minds are agitated, and the whole system of life is continued in motion. In the writings of other poets, a character is too often an individual: in those of Shakespeare it is commonly a species.

It is from this wide extension of design that so much instruction is derived. It is this which fills the plays of Shakespeare with practical axioms and domestic wisdom. It was said of Euripides, that every verse was a precept; and it may be said of Shakespeare, that from his works may be collected a system of civil and œconomical prudence. Yet his real power is not shewn in the splendor of particular passages, but by the progress of his fable, and the tenor of his dialogue: and he that tries to recommend him by select quotations, will succeed like the pedant in Hierocles, who, when he offered his house to sale-carried a brick in his pocket as a specimen.

It will not easily be imagined how much Shakespeare excels in accommodating his sentiments to real life, but by comparing him with other authors. It was observed of the ancient schools of declamation, that the more diligently they were frequented, the more was the student disqualified for the world, because he found nothing there which he should ever meet in any other place. The same remark may be applied to every stage but that of Shakespeare. The theatre, when it is under any other direction, is peopled by such characters as were never seen, conversing in a language which was never heard, upon topics which will never arise in the commerce of mankind. But the dialogue of this author is often so evidently determined by the incident which

produces it, and is pursued with so much ease and simplicity, that it seems scarcely to claim the merit of fiction, but to have been gleaned by diligent selection out of common conversation, and common occurrences.

Upon every other stage the universal agent is love, by whose power all good and evil is distributed, and every action quickened or retarded. To bring a lover, a lady, and a rival into the fable; to entangle them in contradictory obligations, perplex them with oppositions of interest, and harass them with violence of desires inconsistent with each other; to make them meet in rapture, and part in agony; to fill their mouths with hyperbolical joy and outrageous sorrow; to distress them as nothing human ever was distressed; to deliver them as nothing human ever was delivered; is the business of a modern dramatist. For this, probability is violated, life is misrepresented, and language is depraved. But love is only one of many passions; and as it has no great influence upon the sum of life, it has little operation in the dramas of a poet, who caught his ideas from the living world, and exhibited only what he saw before him. He knew that any other passion, as it was regular or exorbitant, was a cause of happiness or calamity. ✓

Characters thus ample and general were not easily discriminated and preserved, yet perhaps no poet ever kept his personages more distinct from each other. I will not say with Pope, that every speech may be assigned to the proper speaker, because many speeches there are which have nothing characteristic; but, perhaps, though some may be

equally adapted to every person, it will be difficult to find that any can be properly transferred from the present possessor to another claimant. The choice is right, when there is reason for choice.

Other dramatists can only gain attention by hyperbolic or aggravated characters, by fabulous and unexampled excellence or depravity, as the writers of barbarous romances invigorated the reader by a giant and a dwarf; and he that should form his expectations of human affairs from the play, or from the tale, would be equally deceived. Shakespeare has no heroes; his scenes are occupied only by men, who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion: even where the agency is supernatural, the dialogue is level with life. Other writers disguise the most natural passions and most frequent incidents; so that he who contemplates them in the book will not know them in the world: Shakespeare approximates the remote, and familiarizes the wonderful; the event which he represents will not happen, but, if it were possible, its effects would probably be such as he has assigned; and it may be said, that he has not only shewn human nature as it acts in real exigencies, but as it would be found in trials, to which it cannot be exposed.

This therefore is the praise of Shakespeare, that his drama is the mirror of life; that he who has mazed his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious ecstasies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the

world, and a confessor predict the progress of the passions.

His adherence to general nature has exposed him to the censure of critics, who form their judgments upon narrower principles. Dennis and Rymer think his Romans not sufficiently Roman; and Voltaire censures his kings as not completely royal. Dennis is offended, that Menenius, a senator of Rome, should play the buffoon; and Voltaire perhaps thinks decency violated when the Danish usurper is represented as a drunkard. But Shakespeare always makes nature predominate over accident; and, if he preserves the essential character, is not very careful of distinctions superinduced and adventitious. His story requires Romans or kings, but he thinks only on men. He knew that Rome, like every other city, had men of all dispositions; and wanting a buffoon, he went into the senate-house for that which the senate-house would certainly have afforded him. He was inclined to shew an usurper and a murderer not only odious, but despicable; he therefore added drunkenness to his other qualities, knowing that kings love wine like other men, and that wine exerts its natural power upon kings. These are the petty cavils of petty minds; a poet overlooks the casual distinction of country and condition, as a painter, satisfied with the figure, neglects the drapery.

The censure which he has incurred by mixing comic and tragic scenes, as it extends to all his works, deserves more consideration. Let the fact be first stated, and then examined.

Shakespeare's plays are not in the rigorous and critical sense either tragedies or comedies, but compo-

branch of the scene
 spots upon the scene

sitions of a distinct kind ; exhibiting the real state of sublunary nature, which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion and innumerable modes of combination ; and expressing the course of the world, in which the loss of one is the gain of another ; in which, at the same time, the reveller is hasting to his wine, and the mourner burying his friend ; in which the malignity of one is sometimes defeated by the frolic of another ; and many mischiefs and many benefits are done and hindered without design.

Out of this chaos of mingled purposes and casualties the ancient poets, according to the laws which custom had prescribed, selected some the crimes of men, and some their absurdities ; some the momentous vicissitudes of life, and some the lighter occurrences ; some the terrors of distress, and some the gaieties of prosperity. Thus rose the two modes of imitation, known by the name of tragedy and comedy, compositions intended to promote different ends by contrary means, and considered as so little allied, that I do not recollect among the Greeks or Romans a single writer who attempted both.

Shakespeare has united the powers of exciting laughter and sorrow not only in one mind, but in one composition. Almost all his plays are divided between serious and ludicrous characters, and, in the successive evolutions of the design, sometimes produce seriousness and sorrow, and sometimes levity and laughter.

That this is a practice contrary to the rules of criticism will be readily allowed ; but there is always

an appeal open from criticism to nature. The end of writing is to instruct; the end of poetry is to instruct by pleasing. That the mingled drama may convey all the instruction of tragedy or comedy cannot be denied, because it includes both in its alternations of exhibition, and approaches nearer than either to the appearance of life, by shewing how great machinations and slender designs may promote or obviate one another, and the high and the low cooperate in the general system by unavoidable concatenation.

It is objected, that by this change of scenes the passions are interrupted in their progression, and that the principal event, being not advanced by a due gradation of preparatory incidents, wants at last the power to move, which constitutes the perfection of dramatic poetry. This reasoning is so specious, that it is received as true even by those who in daily experience feel it to be false. The interchanges of mingled scenes seldom fail to produce the intended vicissitudes of passion. Fiction cannot move so much, but that the attention may be easily transferred; and though it must be allowed that pleasing melancholy be sometimes interrupted by unwelcome levity, yet let it be considered likewise, that melancholy is often not pleasing, and that the disturbance of one man may be the relief of another; that different auditors have different habitudes; and that, upon the whole, all pleasure consists in variety.

The players, who in their edition divided our author's works into comedies, histories, and tragedies, seem not to have distinguished the three kinds by any very exact or definite ideas.

An action which ended happily to the principal persons, however serious or distressful through its intermediate incidents, in their opinion constituted a comedy. This idea of a comedy continued long amongst us; and plays were written, which, by changing the catastrophe, were tragedies to-day, and comedies to-morrow.

Tragedy was not in those times a poem of more general dignity or elevation than comedy; it required only a calamitous conclusion, with which the common criticism of that age was satisfied, whatever lighter pleasure it afforded in its progress.

History was a series of actions, with no other than chronological succession, independent on each other, and without any tendency to introduce or regulate the conclusion. It is not always very nicely distinguished from tragedy. There is not much nearer approach to unity of action in the tragedy of *Antony and Cleopatra*, than in the history of *Richard the Second*. But a history might be continued through many plays; as it had no plan, it had no limits.

[Through all these denominations of the drama, Shakespeare's mode of composition is the same; an interchange of seriousness and merriment, by which the mind is softened at one time, and exhilarated at another. But whatever be his purpose, whether to gladden or depress, or to conduct the story, without vehemence or emotion, through tracts of easy and familiar dialogue, he never fails to attain his purpose; as he commands us, we laugh or mourn, or sit silent with quiet expectation, in tranquillity without indifference.]

When Shakespeare's plan is understood, most of the criticisms of Rymer and Voltaire vanish away. The play of Hamlet is opened, without impropriety, by two sentinels; Iago bellows at Brabantio's window, without injury to the scheme of the play, though in terms which a modern audience would not easily endure; the character of Polonius is seasonable and useful; and the grave-diggers themselves may be heard with applause.

Shakespeare engaged in dramatic poetry with the world open before him; the rules of the ancients were yet known to few; the public judgment was unformed; he had no example of such fame as might force him upon imitation, nor critics of such authority as might restrain his extravagance: he therefore indulged his natural disposition; and his disposition, as Rymer has remarked, led him to comedy. In tragedy he often writes, with great appearance of toil and study, what is written at last with little felicity; but, in his comic scenes, he seems to produce, without labour, what no labour can improve. In tragedy he is always struggling after some occasion to be comic; but in comedy he seems to repose, or to luxuriate, as in a mode of thinking, congenial to his nature. In his tragic scenes there is always something wanting, but his comedy often surpasses expectation or desire. His comedy pleases by the thoughts and the language, and his tragedy for the greater part by incident and action. His tragedy seems to be skill, his comedy to be instinct.

The force of his comic scenes has suffered little diminution from the changes made by a century and a half, in manners or in words. As his personages

No such thing in the world

2
10

act upon principles arising from genuine passion, very little modified by particular forms, their pleasures and vexations are communicable to all times and to all places; they are natural, and therefore durable: the adventitious peculiarities of personal habits are only superficial dyes, bright and pleasing for a little while, yet soon fading to a dim tinct, without any remains of former lustre; but the discriminations of true passion are the colours of nature: they pervade the whole mass, and can only perish with the body that exhibits them. The accidental compositions of heterogeneous modes are dissolved by the chance which combined them; but the uniform simplicity of primitive qualities neither admits increase, nor suffers decay. The sand heaped by one flood is scattered by another, but the rock always continues in its place. The stream of time, which is continually washing the dissoluble fabrics of other poets, passes without injury by the adamant of Shakespeare.

If there be, what I believe there is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language, as to remain settled and unaltered; this style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness, and below

refinement, where propriety resides, and where this poet seems to have gathered his comic dialogue. He is therefore more agreeable to the ears of the present age than any other author equally remote, and among his other excellencies deserves to be studied as one of the original masters of our language.

These observations are to be considered not as unexceptionably constant, but as containing general and predominant truth. Shakespeare's familiar dialogue is affirmed to be smooth and clear, yet not wholly without ruggedness or difficulty; as a country may be eminently fruitful, though it has spots unfit for cultivation; his characters are praised as natural, though their sentiments are sometimes forced, and their actions improbable; as the earth upon the whole is spherical, though its surface is varied with protuberances and cavities.

Shakespeare with his excellencies has likewise faults, and faults sufficient to obscure and overwhelm any other merit. I shall shew them in the proportion in which they appear to me, without envious malignity or superstitious veneration. No question can be more innocently discussed than a dead poet's pretensions to renown; and little regard is due to that bigotry which sets candour higher than truth.

His first defect is that to which may be imputed most of the evil in books or in men. He sacrifices virtue to convenience, and is so much more careful to please than to instruct, that he seems to write without any moral purpose. From his writings indeed a system of social duty may be selected, for he that thinks reasonably must think morally; but his

precepts and axioms drop casually from him; he makes no just distribution of good or evil, nor is always careful to shew in the virtuous a disapprobation of the wicked; he carries his persons indifferently through right and wrong, and at the close dismisses them without further care, and leaves their examples to operate by chance. This fault the barbarity of his age cannot extenuate; for it is always a writer's duty to make the world better, and justice is a virtue independent on time or place.

The plots are often so loosely formed, that a very slight consideration may improve them, and so carelessly pursued, that he seems not always fully to comprehend his own design. He omits opportunities of instructing or delighting, which the train of his story seems to force upon him, and apparently rejects those exhibitions which would be more affecting, for the sake of those which are more easy.

It may be observed, that in many of his plays the latter part is evidently neglected. When he found himself near the end of his work, and in view of his reward, he shortened the labour to snatch the profit. He therefore remits his efforts where he should most vigorously exert them, and his catastrophe is probably produced or imperfectly represented.

He had no regard to distinction of time or place, but gives to one age or nation, without scruple, the customs, institutions, and opinions of another, at the expence not only of likelihood, but of possibility. These faults Pope has endeavoured, with more zeal than judgment, to transfer to his imagined interpolators. We need not wonder to find Hector quoting Aristotle, when we see the loves of Theseus

and Hippolyta combined with the gothic mythology of fairies. Shakespeare, indeed, was not the only violator of chronology, for in the same age Sidney, who wanted not the advantages of learning, has in his Arcadia, confounded the pastoral with the feudal times, the days of innocence, quiet, and security, with those of turbulence, violence, and adventure.

In his comic scenes he is seldom very successful, when he engages his characters in reciprocations of smartness and contests of sarcasm; their jests are commonly gross, and their pleasantry licentious; neither his gentlemen nor his ladies have much delicacy, nor are sufficiently distinguished from his clowns by any appearance of refined manners. Whether he represented the real conversation of his time is not easy to determine: the reign of Elizabeth is commonly supposed to have been a time of stateliness, formality, and reserve; yet perhaps the relaxations of that severity were not very elegant. There must, however, have been always some modes of gaiety preferable to others, and a writer ought to choose the best.

In tragedy his performance seems constantly to be worse, as his labour is more. The effusions of passion, which exigence forces out, are for the most part striking and energetic; but whenever he solicits his invention, or strains his faculties, the offspring of his throes is tumour, meanness, tediousness, and obscurity.

In narration he affects a disproportionate pomp of diction, and a wearisome train of circumlocution, and tells the incident imperfectly in many words,

which might have been more plainly delivered in few. Narration in dramatic poetry is naturally tedious, as it is unanimated and inactive, and obstructs the progress of the action; it should therefore always be rapid, and enlivened by frequent interruption. Shakespeare found it an incumbrance, and instead of lightening it by brevity, endeavoured to recommend it by dignity and splendor.

His declamations or set speeches are commonly cold and weak, for his power was the power of nature; when he endeavoured, like other tragic writers, to catch opportunities of amplification, and instead of inquiring what the occasion demanded, to shew how much his stores of knowledge could supply, he seldom escapes without the pity or resentment of his reader.

It is incident to him to be now and then entangled with an unwieldy sentiment, which he cannot well express, and will not reject; he struggles with it a while, and, if it continues stubborn, comprises it in words such as occur, and leaves it to be disentangled and evolved by those who have more leisure to bestow upon it.

Not that always where the language is intricate the thought is subtle, or the image always great where the line is bulky; the equality of words to things is very often neglected, and trivial sentiments and vulgar ideas disappoint the attention, to which they are recommended by sonorous epithets and swelling figures.

But the admirers of this great poet have most reason to complain when he approaches nearest to his highest excellence, and seems fully resolved to sink

them in dejection, and mollify them with tender emotions by the fall of greatness, the danger of innocence, or the crosses of love. What he does best, he soon ceases to do. He is not soft and pathetic without some idle conceit, or contemptible equivocation. He no sooner begins to move, than he counteracts himself; and terror and pity, as they are rising in the mind, are checked and blasted by sudden frigidity.

A quibble is to Shakespeare, what luminous vapours are to the traveller: he follows it at all adventures; it is sure to lead him out of his way, and sure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irresistible. Whatever be the dignity or profundity of his disquisition, whether he be enlarging knowledge or exalting affection, whether he be amusing attention with incidents, or enchaining it in suspense, let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career, or stoop from his elevation. A quibble, poor and barren as it is, gave him such delight, that he was content to purchase it, by the sacrifice of reason, propriety, and truth. A quibble was to him the fatal Cleopatra for which he lost the world, and was content to lose it.

It will be thought strange, that, in enumerating the defects of this writer, I have not yet mentioned his neglect of the unities; his violation of those laws which have been instituted and established by the joint authority of poets and critics.

For his other deviations from the art of writing, I resign him to critical justice, without making any other demand in his favour, than that which must be indulged to all human excellence: that his virtues be rated with his failings: but, from the censure which this irregularity may bring upon him, I shall, with due reverence to that learning which I must oppose, adventure to try how I can defend him.

His histories, being neither tragedies nor comedies, are not subject to any of their laws; nothing more is necessary to all the praise which they expect, than that the changes of action be so prepared as to be understood; that the incidents be various and affecting, and the characters consistent, natural, and distinct. No other unity is intended, and therefore none is to be sought.

In his other works he has well enough preserved the unity of action. He has not, indeed, an intrigue regularly perplexed and regularly unravelled; he does not endeavour to hide his design only to discover it, for this is seldom the order of real events, and Shakespeare is the poet of nature: but his plan has commonly, what Aristotle requires, a beginning, a middle, and an end; one event is concatenated with another, and the conclusion follows by easy consequence. There are perhaps some incidents that might be spared, as in other poets there is much talk that only fills up time upon the stage; but the general system makes gradual advances, and the end of the play is the end of expectation.

To the unities of time and place he has shewn no regard; and perhaps a nearer view of the principles

on which they stand will diminish their value, and withdraw from them the veneration which, from the time of Corneille, they have very generally received, by discovering that they have given more trouble to the poet, than pleasure to the auditor.

The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The critics hold it impossible, that an action of months or years can be possibly believed to pass in three hours; or that the spectator can suppose himself to sit in the theatre, while ambassadors go and return between distant kings, while armies are levied and towns besieged, while an exile wanders and returns, or till he whom they saw courting his mistress, shall lament the untimely fall of his son. The mind revolts from evident falsehood, and fiction loses its force when it departs from the resemblance of reality.

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at Alexandria, cannot suppose that he sees the next at Rome, at a distance to which not the dragons of Medea could, in so short a time, have transported him; he knows with certainty that he has not changed his place; and he knows that place cannot change itself; that what was a house cannot become a plain; that what was Thebes can never be Persepolis.

Such is the triumphant language with which a critic exults over the misery of an irregular poet, and exults commonly without resistance or reply. It is time, therefore, to tell him by the authority of Shakespeare, that he assumes, as an unquestionable

principle, a position, which, while his breath is forming it into words, his understanding pronounces to be false. It is false, that any representation is mistaken for reality ; that any dramatic fable in its materiality was ever credible, or, for a single moment, was ever credited.

The objection arising from the impossibility of passing the first hour at Alexandria, and the next at Rome, supposes, that when the play opens, the spectator really imagines himself at Alexandria, and believes that his walk to the theatre has been a voyage to Egypt, and that he lives in the days of Antony and Cleopatra. Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the Ptolemies, may take it in half an hour for the promontory of Actium. Delusion, if delusion be admitted, has no certain limitation ; if the spectator can be once persuaded, that his old acquaintance are Alexander and Cæsar, that a room illuminated with candles is the plain of Pharsalia, or the bank of Granicus, he is in a state of elevation above the reach of reason, or of truth, and from the heights of empyrean poetry, may despise the circumscriptions of terrestrial nature. There is no reason why a mind thus wandering in ecstasy should count the clock, or why an hour should not be a century in that calenture of the brain that can make the stage a field.

The truth is, that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a stage, and that the players are only players. They came to hear a certain number of lines recited with just gesture and elegant

modulation. The lines relate to some action, and an action must be in some place; but the different actions that complete a story may be in places very remote from each other; and where is the absurdity of allowing that space to represent first Athens, and then Sicily, which was always known to be neither Sicily nor Athens, but a modern theatre?

By supposition, as place is introduced, time may be extended; the time required by the fable elapses for the most part between the acts; for, of so much of the action as is represented, the real and poetical duration is the same. If, in the first act, preparations for war against Mithridates are represented to be made in Rome, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in Pontus; we know that there is neither war, nor preparation for war; we know that we are neither in Rome nor Pontus; that neither Mithridates nor Lucullus are before us. The drama exhibits successive imitations of successive actions; and why may not the second imitation represent an action that happened years after the first, if it be so connected with it, that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only see their imitation.

It will be asked, how the drama moves, if it is not credited. It is credited with all the credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the au-

ditor what he would himself feel, if he were to do or suffer what is there feigned to be suffered or to be done. The reflection that strikes the heart is not, that the evils before us are real evils, but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moment; but we rather lament the possibility than suppose the presence of misery, as a mother weeps over her babe, when she remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Imitations produce pain or pleasure, not because they are mistaken for realities, but because they bring realities to mind. When the imagination is recreated by a painted landscape, the trees are not supposed capable to give us shade, or the fountains coolness; but we consider how we should be pleased with such fountains playing beside us, and such woods waving over us. We are agitated in reading the history of *Henry the Fifth*, yet no man takes his book for the field of Agincourt. A dramatic exhibition is a book recited with concomitants that increase or diminish its effect. Familiar comedy is often more powerful on the theatre, than in the page; imperial tragedy is always less. The humour of Petruchio may be heightened by grimace; but what voice or what gesture can hope to add dignity or force to the soliloquy of Cato?

A play read affects the mind like a play acted. It is therefore evident, that the action is not supposed to be real; and it follows, that between the

acts a longer or shorter time may be allowed to pass, and that no more account of space or duration is to be taken by the auditor of a drama, than by the reader of a narrative, before whom may pass in an hour the life of a hero, or the revolutions of an empire.

Whether Shakespeare knew the unities, and rejected them by design, or deviated from them by happy ignorance, it is, I think, impossible to decide, and useless to inquire. We may reasonably suppose, that, when he rose to notice, he did not want the counsels and admonitions of scholars and critics, and that he at last deliberately persisted in a practice, which he might have begun by chance. As nothing is essential to the fable but unity of action, and as the unities of time and place arise evidently from false assumptions, and, by circumscribing the extent of the drama, lessen its variety, I cannot think it much to be lamented, that they were not known by him, or not observed: nor, if such another poet could arise, should I very vehemently reproach him that his first act passed at Venice, and his next in Cyprus. Such violations of rules merely positive become the comprehensive genius of Shakespeare, and such censures are suitable to the minute and slender criticism of Voltaire.

*Non usque adeo permiscuit imis
Longus summa dies, ut non, si voce Metelli
Serventur leges, malint a Cæsare tolli.*

Yet when I speak thus slightly of dramatic rules, I cannot but recollect how much wit and learning may be produced against me; before such authorities

I am afraid to stand, not that I think the present question one of those that are to be decided by mere authority, but because it is to be suspected, that these precepts have not been so easily received, but for better reasons than I have yet been able to find. The result of my inquiries, in which it would be ludicrous to boast of impartiality, is, that the unities of time and place are not essential to a just drama; that though they may sometimes conduce to pleasure, they are always to be sacrificed to the nobler beauties of variety and instruction; and that a play written with nice observation of critical rules, is to be contemplated as an elaborate curiosity, as the product of superfluous and ostentatious art, by which is shewn, rather what is possible, than what is necessary.

He that, without diminution of any other excellence, shall preserve all the unities unbroken, deserves the like applause with the architect, who shall display all the orders of architecture in a citadel, without any deduction from its strength: but the principal beauty of a citadel is to exclude the enemy; and the greatest graces of a play are to copy nature, and instruct life.

Perhaps, what I have here not dogmatically but deliberately written, may recall the principles of the drama to a new examination. I am almost frightened at my own temerity; and when I estimate the fame and strength of those that maintain the contrary opinion, am ready to sink down in reverential silence; as Æneas withdrew from the defence of Troy, when he saw Neptune shaking the wall, and Juno heading the besiegers.

Those whom my arguments cannot persuade to give their approbation to the judgment of Shakespeare, will easily, if they consider the condition of his life, make some allowance for his ignorance.

Every man's performances, to be rightly estimated, must be compared with the state of the age in which he lived, and with his own particular opportunities; and though to the reader a book be not worse or better for the circumstances of the author, yet as there is always a silent reference of human works to human abilities, and as the inquiry, how far man may extend his designs, or how high he may rate his native force, is of far greater dignity than in what rank we shall place any particular performance, curiosity is always busy to discover the instruments, as well as to survey the workmanship, to know how much is to be ascribed to original powers, and how much to casual and adventitious help. The palaces of Peru or Mexico were certainly mean and incommodious habitations, if compared to the houses of European monarchs; yet who could forbear to view them with astonishment, who remembered that they were built without the use of iron?

The English nation, in the time of Shakespeare, was yet struggling to emerge from barbarity. The philology of Italy had been transplanted hither in the reign of Henry the Eighth; and the learned languages had been successfully cultivated by Lilly, Linacre, and More; by Pole, Cheke, and Gardiner; and afterwards by Smith, Clerk, Haddon, and Ascham. Greek was now taught to boys in the principal schools; and those who united elegance with learning, read, with great diligence, the Italian and

Spanish poets. But literature was yet confined to professed scholars, or to men and women of high rank. The public was gross and dark; and to be able to read and write, was an accomplishment still valued for its rarity.

Nations, like individuals, have their infancy. A people newly awakened to literary curiosity, being yet unacquainted with the true state of things, knows not how to judge of that which is proposed as its resemblance. Whatever is remote from common appearances, is always welcome to vulgar, as to childish credulity; and of a country unenlightened by learning, the whole people is the vulgar. The study of those who then aspired to plebeian learning was laid out upon adventures, giants, dragons, and enchantments. *The Death of Arthur* was the favourite volume.

The mind, which has feasted on the luxurious wonders of fiction, has no taste of the insipidity of truth. A play, which imitated only the common occurrences of the world, would, upon the admirers of *Palmerin* and *Guy of Warwick*, have made little impression; he that wrote for such an audience was under the necessity of looking round for strange events and fabulous transactions; and that incredibility, by which maturer knowledge is offended, was the chief recommendation of writings, to unskilful curiosity.

Our author's plots are generally borrowed from novels; and it is reasonable to suppose, that he chose the most popular, such as were read by many, and related by more; for his audience could not have followed him through the intricacies of the

drama, had they not held the thread of the story in their hands.

The stories, which we now find only in remoter authors, were in his time accessible and familiar. The fable of *As you like it*, which is supposed to be copied from Chaucer's *Gamelyn*, was a little pamphlet of those times; and old Mr. Cibber remembered the tale of Hamlet in plain English prose, which the critics have now to seek in Saxo Grammaticus.

His English histories he took from English chronicles and English ballads; and as the ancient writers were made known to his countrymen by versions, they supplied him with new subjects; he dilated some of Plutarch's lives into plays, when they had been translated by North.

His plots, whether historical or fabulous, are always crowded with incidents, by which the attention of a rude people was more easily caught than by sentiment or argumentation; and such is the power of the marvellous, even over those who despise it, that every man finds his mind more strongly seized by the tragedies of Shakespeare than of any other writer: others please us by particular speeches; but he always makes us anxious for the event, and has perhaps excelled all but Homer in securing the first purpose of a writer, by exciting restless and unquenchable curiosity, and compelling him that reads his work to read it through.

The shows and bustle with which his plays abound have the same original. As knowledge advances, pleasure passes from the eye to the ear, but returns, as it declines, from the ear to the eye. Those to whom our author's labours were exhibited had more

skill in pomps or processions than in poetical language, and perhaps wanted some visible and discriminated events, as comments on the dialogue. He knew how he should most please; and whether his practice is more agreeable to nature, or whether his example has prejudiced the nation, we still find that on our stage something must be done as well as said, and inactive declamation is very coldly heard, however musical or elegant, passionate or sublime.

Voltaire expresses his wonder, that our author's extravagancies are endured by a nation, which has seen the tragedy of Cato. Let him be answered, that Addison speaks the language of poets; and Shakespeare, of men. We find in Cato innumerable beauties which enamour us of its author, but we see nothing that acquaints us with human sentiments or human actions; we place it with the fairest and the noblest progeny which judgment propagates by conjunction with learning; but Othello is the vigorous and vivacious offspring of observation impregnated by genius. Cato affords a splendid exhibition of artificial and fictitious manners, and delivers just and noble sentiments, in diction easy, elevated, and harmonious; but its hopes and fears communicate no vibration to the heart; the composition refers us only to the writer; we pronounce the name of Cato, but we think on Addison.

The work of a correct and regular writer is a garden accurately formed and diligently planted, varied with shades, and scented with flowers; the composition of Shakespeare is a forest, in which oaks extend their branches, and pines tower in the air, interspersed sometimes with weeds and brambles, and

sometimes giving shelter to myrtles and to roses; filling the eye with awful pomp, and gratifying the mind with endless diversity. Other poets display cabinets of precious rarities, minutely finished, wrought into shape, and polished into brightness. Shakspeare opens a mine which contains gold and diamonds in unexhaustible plenty, though clouded by incrustations, debased by impurities, and mingled with a mass of meaner minerals.

It has been much disputed, whether Shakspeare owed his excellence to his own native force, or whether he had the common helps of scholastic education, the precepts of critical science, and the examples of ancient authors.

There has always prevailed a tradition, that Shakspeare wanted learning, that he had no regular education, nor much skill in the dead languages. Jonson, his friend, affirms, that *he had small Latin, and less Greek*; who, besides that he had no imaginable temptation to falsehood, wrote at a time when the character and acquisitions of Shakspeare were known to multitudes. His evidence ought therefore to decide the controversy, unless some testimony of equal force could be opposed.

Some have imagined, that they have discovered deep learning in many imitations of old writers; but the examples which I have known urged were drawn from books translated in his time; or were such easy coincidences of thought, as will happen to all who consider the same subjects; or such remarks on life or axioms of morality as float in conversation, and are transmitted through the world in proverbial sentences.

I have found it remarked, that, in this important sentence, "Go before, I'll follow," we read a translation of, "I præ, sequar." I have been told, that when Caliban, after a pleasing dream, says, *I cry'd to sleep again*, the author imitates Anacreon, who had, like every other man, the same wish on the same occasion.

There are a few passages which may pass for imitations, but so few, that the exception only confirms the rule; he obtained them from accidental quotations, or by oral communication, and as he used what he had, would have used more if he had obtained it.

The *Comedy of Errors* is confessedly taken from the *Menæchmi* of Plautus; from the only play of Plautus which was then in English. What can be more probable, than that he who copied that would have copied more; but that those which were not translated were inaccessible?

Whether he knew the modern languages is uncertain. That his plays have some French scenes proves but little; he might easily procure them to be written, and probably, even though he had known the language in the common degree, he could not have written it without assistance. In the story of Romeo and Juliet he is observed to have followed the English translation, where it deviates from the Italian: but this on the other part proves nothing against his knowledge of the original. He was to copy, not what he knew himself, but what was known to his audience.

It is most likely that he had learned Latin sufficiently to make him acquainted with construction,

but that he never advanced to an easy perusal of the Roman authors. Concerning his skill in modern languages, I can find no sufficient ground of determination; but as no imitations of French or Italian authors have been discovered, though the Italian poetry was then high in esteem, I am inclined to believe, that he read little more than English, and chose for his fables only such tales as he found translated.

That much knowledge is scattered over his works is very justly observed by Pope; but it is often such knowledge as books did not supply. He that will understand Shakespeare, must not be content to study him in the closet, he must look for his meaning sometimes among the sports of the field, and sometimes among the manufactures of the shop.

There is, however, proof enough that he was a very diligent reader, nor was our language then so indigent of books, but that he might very liberally indulge his curiosity without excursion into foreign literature. Many of the Roman authors were translated, and some of the Greek; the Reformation had filled the kingdom with theological learning; most of the topics of human disquisition had found English writers; and poetry had been cultivated, not only with diligence, but success. This was a stock of knowledge sufficient for a mind so capable of appropriating and improving it.

But the greater part of his excellence was the product of his own genius. He found the English stage in a state of the utmost rudeness; no essays either in tragedy or comedy had appeared, from which it could be discovered to what degree of delight either

one or other might be carried. Neither character nor dialogue were yet understood. Shakespeare may be truly said to have introduced them both amongst us, and in some of his happier scenes to have carried them both to the utmost height.

By what gradations of improvement he proceeded, is not easily known; for the chronology of his works is yet unsettled. Rowe is of opinion, that "perhaps we are not to look for his beginning, like those of other writers, in his least perfect works; art had so little, and nature so large a share in what he did, that for aught I know," says he, "the performances of his youth, as they were the most vigorous, were the best." But the power of nature is only the power of using to any certain purpose the materials which diligence procures or opportunity supplies. Nature gives no man knowledge, and, when images are collected by study and experience, can only assist in combining or applying them. Shakespeare, however favoured by nature, could impart only what he had learned; and as he must increase his ideas, like other mortals, by gradual acquisition, he, like them, grew wiser as he grew older, could display life better as he knew it more, and instruct with more efficacy, as he was himself more amply instructed.

There is a vigilance of observation and accuracy of distinction which books and precepts cannot confer; from this almost all original and native excellence proceeds. Shakespeare must have looked upon mankind with perspicacity, in the highest degree curious and attentive. Other writers borrow their characters from preceding writers, and diversify them

only by the accidental appendages of present manners; the dress is a little varied, but the body is the same. Our author had both matter and form to provide; for, except the characters of Chaucer, to whom I think he is not much indebted, there were no writers in English, and perhaps not many in other modern languages, which shewed life in its native colours.

The contest about the original benevolence or malignity of man had not yet commenced. Speculation had not yet attempted to analyze the mind, to trace the passions to their sources, to unfold the seminal principles of vice and virtue, or sound the depths of the heart for the motives of action. All those inquiries, which from that time that human nature became the fashionable study, have been made sometimes with nice discernment, but often with idle subtilty, were yet unattempted. The tales with which the infancy of learning was satisfied, exhibited only the superficial appearances of action, related the events, but omitted the causes, and were formed for such as delighted in wonders rather than in truth. Mankind was not then to be studied in the closét; he that would know the world, was under the necessity of gleaning his own remarks, by mingling as he could in its business and amusements.

Boyle congratulated himself upon his high birth, because it favoured his curiosity, by facilitating his access. Shakespeare had no such advantage; he came to London a needy adventurer, and lived for a time by very mean employments. Many works of genius and learning have been performed in states

of life that appear very little favourable to thought or to inquiry; so many, that he who considers them is inclined to think that he sees enterprise and perseverance predominating over all external agency, and bidding help and hindrance vanish before them. The genius of Shakespeare was not to be depressed by the weight of poverty, nor limited by the narrow conversation to which men in want are inevitably condemned; the incumbrances of his fortune were shaken from his mind, *as dew drops from a lion's mane*.

Though he had so many difficulties to encounter, and so little assistance to surmount them, he has been able to obtain an exact knowledge of many modes of life, and many casts of native dispositions; to vary them with great multiplicity; to mark them by nice distinctions; and to shew them in full view by proper combinations. In this part of his performances he had none to imitate, but has been himself imitated by all succeeding writers; and it may be doubted, whether from all his successors more maxims of theoretical knowledge, or more rules of practical prudence, can be collected, than he alone has given to his country.

Nor was his attention confined to the actions of men; he was an exact surveyor of the inanimate world; his descriptions have always some peculiarities, gathered by contemplating things as they really exist. It may be observed that the oldest poets of many nations preserve their reputation, and that the following generations of wit, after a short celebrity, sink into oblivion. The first, whoever they be, must take their sentiments and descriptions

immediately from knowledge; the resemblance is therefore just, their descriptions are verified by every eye, and their sentiments acknowledged by every breast. Those whom their fame invites to the same studies, copy partly them, and partly nature, till the books of one age gain such authority, as to stand in the place of nature to another, and imitation, always deviating a little, becomes at last capricious and casual. Shakespeare, whether life or nature be his subject, shows plainly that he has seen with his own eyes; he gives the image which he receives, not weakened or distorted by the intervention of any other mind; the ignorant feel his representations to be just, and the learned see that they are complete.

Perhaps it would not be easy to find any author, except Homer, who invented so much as Shakespeare, who so much advanced the studies which he cultivated, or effused so much novelty upon his age or country. The form, the characters, the language, and the shows of the English drama are his. "He seems," says Dennis, "to have been the very original of our English tragical harmony, that is, the harmony of blank verse, diversified often by dissyllable and trisyllable terminations. For the diversity distinguishes it from heroic harmony, and by bringing it nearer to common use makes it more proper to gain attention, and more fit for action and dialogue. Such verse we make when we are writing prose; we make such verse in common conversation."

I know not whether this praise is rigorously just. The dissyllable termination, which the critic rightly appropriates to the drama, is to be found,

though, I think, not in *Gorboduc*, which is confessedly before our author; yet in *Hieronymo**, of which the date is not certain, but which there is reason to believe at least as old as his earliest plays. This however is certain, that he is the first who taught either tragedy or comedy to please, there being no theatrical piece of any older writer, of which the name is known, except to antiquaries and collectors of books, which are sought because they are scarce, and would not have been scarce, had they been much esteemed.

To him we must ascribe the praise, unless Spenser may divide it with him, of having first discovered to how much smoothness and harmony the English language could be softened. He has speeches, perhaps sometimes scenes, which have all the delicacy of Rowe, without his effeminacy. He endeavours indeed commonly to strike by the force and vigour of his dialogue, but he never executes his purpose better, than when he tries to sooth by softness.

Yet it must be at last confessed, that as we owe every thing to him, he owes something to us; that, if much of his praise is paid by perception and judgment, much is likewise given by custom and veneration. We fix our eyes upon his graces, and turn them from his deformities, and endure in him what we should in another loath or despise. If we endured without praising, respect for the father of our drama might excuse us; but I have seen, in the book of some modern critic, a collection of anomalies, which shew that he has corrupted language

* It appears, from the induction of Ben Jonson's *Bartholomew Fair*, to have been acted before the year 1590. STEEVENS.

by every mode of depravation, but which his admirer has accumulated as a monument of honour.

He has scenes of undoubted and perpetual excellence; but perhaps not one play, which, if it were now exhibited as the work of a contemporary writer, would be heard to the conclusion. I am indeed far from thinking, that his works were wrought to his own ideas of perfection; when they were such as would satisfy the audience, they satisfied the writer. It is seldom that authors, though more studious of fame than Shakespeare, rise much above the standard of their own age; to add a little to what is best will always be sufficient for present praise, and those who find themselves exalted into fame, are willing to credit their encomiasts, and to spare the labour of contending with themselves.

It does not appear that Shakespeare thought his works worthy of posterity, that he levied any ideal tribute upon future times, or had any further prospect, than of present popularity and present profit. When his plays had been acted, his hope was at an end; he solicited no addition of honour from the reader. He therefore made no scruple to repeat the same jests in many dialogues, or to entangle different plots by the same knot of perplexity; which may be at least forgiven him, by those who recollect, that of Congreve's four comedies, two are concluded by a marriage in a mask, by a deception, which perhaps never happened, and which, whether likely or not, he did not invent.

So careless was this great poet of future fame, that, though he retired to ease and plenty, while he was yet little *declined into the vale of years*, before

he could be disgusted with fatigue, or disabled by infirmity, he made no collection of his works, nor desired to rescue those that had been already published from the deprivations that obscured them, or secure to the rest a better destiny, by giving them to the world in their genuine state.

Of the plays which bear the name of Shakespeare in the late editions, the greater part were not published till about seven years after his death; and the few which appeared in his life are apparently thrust into the world without the care of the author, and therefore probably without his knowledge.

Of all the publishers, clandestine or professed, the negligence and unskilfulness has by the late revisers been sufficiently shewn. The faults of all are indeed numerous and gross, and have not only corrupted many passages perhaps beyond recovery, but have brought others into suspicion, which are only obscured by obsolete phraseology, or by the writer's unskilfulness and affectation. To alter is more easy than to explain, and temerity is a more common quality than diligence. Those who saw that they must employ conjecture to a certain degree, were willing to indulge it a little further. Had the author published his own works, we should have sat quietly down to disentangle his intricacies, and clear his obscurities; but now we tear what we cannot loose, and eject what we happen not to understand.

The faults are more than could have happened without the concurrence of many causes. The style of Shakespeare was in itself ungrammatical, perplexed, and obscure; his works were transcribed for

the players by those who may be supposed to have seldom understood them; they were transmitted by copiers equally unskilful, who still multiplied errors; they were perhaps sometimes mutilated by the actors, for the sake of shortening the speeches; and were at last printed without correction of the press.

In this state they remained, not as Dr. Warburton supposes, because they were unregarded, but because the editor's art was not yet applied to modern languages, and our ancestors were accustomed to so much negligence of English printers, that they could very patiently endure it. At last an edition was undertaken by Rowe; not because a poet was to be published by a poet, for Rowe seems to have thought very little on correction or explanation; but that our author's works might appear like those of his fraternity, with the appendages of a life and commendatory preface. Rowe has been clamorously blamed for not performing what he did not undertake; and it is time that justice be done him, by confessing, that though he seems to have had no thought of corruption beyond the printer's errors, yet he has made many emendations, if they were not made before, which his successors have received without acknowledgment, and which, if they had produced them, would have filled pages and pages with censures of the stupidity by which the faults were committed, with displays of the absurdities which they involved, with ostentatious exposition of the new reading, and self-congratulations on the happiness of discovering.

As of the other editors I have preserved the prefaces, I have likewise borrowed the author's life from Rowe, though not written with much elegance or spirit; it relates, however, what is now to be known, and therefore deserves to pass through all succeeding publications.

The nation had been for many years content enough with Mr. Rowe's performance, when Mr. Pope made them acquainted with the true state of Shakespeare's text, shewed that it was extremely corrupt, and gave reason to hope that there were means of reforming it. He collated the old copies, which none had thought to examine before, and restored many lines to their integrity; but, by a very compendious criticism, he rejected whatever he disliked, and thought more of amputation than of cure.

I know not why he is commended by Dr. Warburton for distinguishing the genuine from the spurious plays. In this choice he exerted no judgment of his own; the plays which he received, were given by Hemings and Condell, the first editors; and those which he rejected, though, according to the licentiousness of the press in those times, they were printed during Shakespeare's life, with his name, had been omitted by his friends, and were never added to his works before the edition of 1664, from which they were copied by the later printers.

This is a work which Pope seems to have thought unworthy of his abilities, being not able to suppress his contempt of *the dull duty of an editor*. He understood but half his undertaking. The duty of a collator is indeed dull, yet, like other tedious tasks, is very necessary; but an emendatory critic would

ill discharge his duty, without qualities very different from dulness. In perusing a corrupted piece, he must have before him all possibilities of meaning, with all possibilities of expression. Such must be his comprehension of thought, and such his copiousness of language. Out of many readings possible, he must be able to select that which best suits with the state, opinions, and modes of language prevailing in every age, and with his author's particular cast of thought, and turn of expression. Such must be his knowledge, and such his taste. Conjectural criticism demands more than humanity possesses, and he that exercises it with most praise, has very frequent need of indulgence. Let us now be told no more of the dull duty of an editor.

Confidence is the common consequence of success. They whose excellence of any kind has been loudly celebrated, are ready to conclude, that their powers are universal. Pope's edition fell below his own expectations, and he was so much offended when he was found to have left any thing for others to do, that he passed the latter part of his life in a state of hostility with verbal criticism.

I have retained all his notes, that no fragment of so great a writer may be lost; his preface, valuable alike for elegance of composition and justness of remark, and containing a general criticism on his author, so extensive that little can be added, and so exact that little can be disputed, every editor has an interest to suppress, but that every reader would demand its insertion,

Pope was succeeded by Theobald, a man of narrow comprehension, and small acquisitions, with no

native and intrinsic splendor of genius, with little of the artificial light of learning, but zealous for minute accuracy, and not negligent in pursuing it. He collated the ancient copies, and rectified many errors. A man so anxiously scrupulous might have been expected to do more, but what little he did was commonly right.

In his reports of copies and editions he is not to be trusted without examination. He speaks sometimes indefinitely of copies, when he has only one. In his enumeration of editions, he mentions the two first folios as of high, and the third folio as of middle authority; but the truth is, that the first is equivalent to all others, and that the rest only deviate from it by the printer's negligence. Whoever has any of the folios has all, excepting those diversities which mere reiteration of editions will produce. I collated them all at the beginning, but afterwards used only the first.

Of his notes I have generally retained those which he retained himself in his second edition, except when they were confuted by subsequent annotators, or were too minute to merit preservation. I have sometimes adopted his restoration of a comma, without inserting the panegyric in which he celebrated himself for his achievement. The exuberant excrescence of his diction I have often lopped, his triumphant exultations over Pope and Rowe I have sometimes suppressed, and his contemptible ostentation I have frequently concealed; but I have in some places shewn him, as he would have shewn himself, for the reader's diversion, that the inflated

emptiness of some notes may justify or excuse the contraction of the rest.

Theobald, thus weak and ignorant, thus mean and faithless, thus petulant and ostentatious, by the good luck of having Pope for his enemy, has escaped, and escaped alone, with reputation, from this undertaking. So willingly does the world support those who solicit favour, against those who command reverence; and so easily is he praised, whom no man can envy.

Our author fell then into the hands of Sir Thomas Hanmer, the Oxford editor, a man, in my opinion, eminently qualified by nature for such studies. He had, what is the first requisite to emendatory criticism, that intuition by which the poet's intention is immediately discovered, and that dexterity of intellect which dispatches its work by the easiest means. He had undoubtedly read much; his acquaintance with customs, opinions, and traditions, seems to have been large; and he is often learned without shew. He seldom passes what he does not understand, without an attempt to find or to make a meaning, and sometimes hastily makes what a little more attention would have found. He is solicitous to reduce to grammar what he could not be sure that his author intended to be grammatical. Shakespeare regarded more the series of ideas, than of words; and his language, not being designed for the reader's desk, was all that he desired it to be, if it conveyed his meaning to the audience.

Hanmer's care of the metre has been too violently censured. He found the measure reformed in so

many passages by the silent labours of some editors, with the silent acquiescence of the rest, that he thought himself allowed to extend a little further the licence, which had already been carried so far without reprehension; and of his corrections in general, it must be confessed, that they are often just, and made commonly with the least possible violation of the text.

But, by inserting his emendations, whether invented or borrowed, into the page, without any notice of varying copies, he has appropriated the labour of his predecessors, and made his own edition of little authority. His confidence, indeed, both in himself and others was too great; he supposes all to be right that was done by Pope and Theobald; he seems not to suspect a critic of fallibility; and it was but reasonable that he should claim what he so liberally granted.

As he never writes without careful inquiry and diligent consideration, I have received all his notes, and believe that every reader will wish for more.

Of the last editor it is more difficult to speak. Respect is due to high place, tenderness to living reputation, and veneration to genius and learning; but he cannot be justly offended at that liberty of which he has himself so frequently given an example, nor very solicitous what is thought of notes, which he ought never to have considered as part of his serious employments, and which, I suppose, since the ardour of composition is remitted, he no longer numbers among his happy effusions.

The original and predominant error of his commentary, is acquiescence in his first thoughts; that

precipitation which is produced by consciousness of quick discernment; and that confidence which presumes to do, by surveying the surface, what labour only can perform, by penetrating the bottom. His notes exhibit sometimes perverse interpretations, and sometimes improbable conjectures; he at one time gives the author more profundity of meaning than the sentence admits, and at another discovers absurdities, where the sense is plain to every other reader. But his emendations are likewise often happy and just; and his interpretation of obscure passages learned and sagacious.

Of his notes, I have commonly rejected those, against which the general voice of the public has exclaimed, or which their own incongruity immediately condemns, and which, I suppose, the author himself would desire to be forgotten. Of the rest, to part I have given the highest approbation, by inserting the offered reading in the text; part I have left to the judgment of the reader, as doubtful, though specious; and part I have censured without reserve, but I am sure without bitterness of malice, and, I hope, without wantonness of insult.

It is no pleasure to me, in revising my volumes, to observe how much paper is wasted in confutation. Whoever considers the revolutions of learning, and the various questions of greater or less importance, upon which wit and reason have exercised their powers, must lament the unsuccessfulness of inquiry, and the slow advances of truth, when he reflects that great part of the labour of every writer is only the destruction of those that went before him. The first care of the builder of a new system, is to

demolish the fabrics which are standing. The chief desire of him that comments an author, is to shew how much other commentators have corrupted and obscured him. The opinions prevalent in one age, as truths above the reach of controversy, are confuted and rejected in another, and rise again to reception in remoter times. Thus the human mind is kept in motion without progress. Thus sometimes truth and error, and sometimes contrarities of error, take each other's place by reciprocal invasion. The tide of seeming knowledge, which is poured over one generation, retires and leaves another naked and barren; the sudden meteors of intelligence, which for a while appear to shoot their beams into the regions of obscurity, on a sudden withdraw their lustre, and leave mortals again to grope their way.

These elevations and depressions of renown, and the contradictions to which all improvers of knowledge must for ever be exposed, since they are not escaped by the highest and brightest of mankind, may surely be endured with patience by critics and annotators, who can rank themselves but as the satellites of their authors. How canst thou beg for life, says Homer's hero to his captive, when thou knowest that thou art now to suffer only what must another day be suffered by Achilles?

Dr. Warburton had a name sufficient to confer celebrity on those who could exalt themselves into antagonists, and his notes have raised a clamour too loud to be distinct. His chief assailants are the authors of the *Canons of Criticism*, and of the *Revisal of Shakespeare's Text*; of whom one ridicules his errors

with airy petulance, suitable enough to the levity of the controversy ; the other attacks them with gloomy malignity, as if he were dragging to justice an assassin or incendiary. The one stings like a fly, sucks a little blood, takes a gay flutter, and returns for more ; the other bites like a viper, and would be glad to leave inflammations and gangrene behind him. When I think on one, with his confederates, I remember the danger of Coriolanus, who was afraid that *girls with spits, and boys with stones, should slay him in puny battle* ; when the other crosses my imagination, I remember the prodigy in Macbeth :

*A falcon tow'ring in his pride of place,
Was by a mousing owl hawk'd at and kill'd.*

Let me however do them justice. One is a wit, and one a scholar*. They have both shewn acuteness sufficient in the discovery of faults, and have both advanced some probable interpretations of obscure passages ; but when they aspire to conjecture and emendation, it appears how falsely we all estimate our own abilities, and the little which they have been able to perform might have taught them more candour to the endeavours of others.

Before Dr. Warburton's edition, *Critical Observations on Shakespeare* had been published by Mr. Up-

* It is extraordinary that this gentleman should attempt so voluminous a work, as the *Revisal of Shakespeare's Text*, when he tells us in his preface, " he was not so fortunate as to be furnished with " either of the folio editions, much less any of the ancient quartos : " and even Sir Thomas Hanmer's performance was known to him " only by Dr. Warburton's representation." FARMER.

ton*, a man skilled in languages, and acquainted with books, but who seems to have had no great vigour of genius or nicety of taste. Many of his explanations are curious and useful, but he likewise, though he professed to oppose the licentious confidence of editors, and adhere to the old copies, is unable to restrain the rage of emendation, though his ardour is ill seconded by his skill. Every cold empiric, when his art is expanded by a successful experiment, swells into a theorist, and the laborious collator at some unlucky moment frolics in conjecture.

Critical, historical, and explanatory notes have been likewise published upon Shakespeare by Dr. Grey, whose diligent perusal of the old English writers has enabled him to make some useful observations. What he undertook he has well enough performed; but as he neither attempts judicial or emendatory criticism, he employs rather his memory than his sagacity. It were to be wished that all would endeavour to imitate his modesty, who have not been able to surpass his knowledge.

I can say with great sincerity of all my predecessors, what I hope will hereafter be said of me, that not one has left Shakespeare without improvement; nor is there one to whom I have not been indebted for assistance and information. Whatever I have taken from them, it was my intention to refer to its original author, and it is certain, that what I have not given to another, I believed when I wrote it to be my own. In some perhaps I have

* Republished by him in 1748, after Dr. Warburton's edition, with alterations, &c. STEEVENS.

been anticipated; but if I am ever found to encroach upon the remarks of any other commentator, I am willing that the honour, be it more or less, should be transferred to the first claimant, for his right, and his alone, stands above dispute; the second can prove his pretensions only to himself, nor can himself always distinguish invention, with sufficient certainty, from recollection.

They have all been treated by me with candour, which they have not been careful of observing to one another. It is not easy to discover from what cause the acrimony of a scholiast can naturally proceed. The subjects to be discussed by him are of very small importance; they involve neither property nor liberty; nor favour the interest of sect or party. The various readings of copies, and different interpretations of a passage, seem to be questions that might exercise the wit, without engaging the passions. But whether it be, that *small things make mean men proud*, and vanity catches small occasions; or that all contrariety of opinion, even in those that can defend it no longer, makes proud men angry; there is often found in commentators a spontaneous strain of invective and contempt, more eager and venomous than is vented by the most furious controvertist in politics against those whom he is hired to defame.

Perhaps the lightness of the matter may conduce to the vehemence of the agency; when the truth to be investigated is so near to inexistence, as to escape attention, its bulk is to be enlarged by rage and exclamation: that to which all would be indifferent in its original state, may attract notice when the fate

of a name is appended to it. A commentator has indeed great temptations to supply by turbulence what he wants of dignity, to beat his little gold to a spacious surface, to work that to foam which no art or diligence can exalt to spirit.

The notes which I have borrowed or written are either illustrative, by which difficulties are explained; or judicial, by which faults and beauties are remarked; or emendatory, by which depravations are corrected.

The explanations transcribed from others, if I do not subjoin any other interpretation, I suppose commonly to be right, at least I intend by acquiescence to confess, that I have nothing better to propose.

After the labours of all the editors, I found many passages which appeared to me likely to obstruct the greater number of readers, and thought it my duty to facilitate their passage. It is impossible for an expositor not to write too little for some, and too much for others. He can only judge what is necessary by his own experience; and how long soever he may deliberate, will at last explain many lines which the learned will think impossible to be mistaken, and omit many for which the ignorant will want his help. These are censures merely relative, and must be quietly endured. I have endeavoured to be neither superfluously copious, nor scrupulously reserved, and hope that I have made my author's meaning accessible to many, who before were frightened from perusing him, and contributed something to the public, by diffusing innocent and rational pleasure.

The complete explanation of an author not systematic and consequential, but desultory and vagrant, abounding in casual allusions and light hints, is not to be expected from any single scholiast. All personal reflections, when names are suppressed, must be in a few years irrecoverably obliterated; and customs, too minute to attract the notice of law, such as modes of dress, formalities of conversation, rules of visits, disposition of furniture, and practices of ceremony, which naturally find places in familiar dialogue, are so fugitive and unsubstantial, that they are not easily retained or recovered. What can be known will be collected by chance, from the recesses of obscure and obsolete papers, perused commonly with some other view. Of this knowledge every man has some, and none has much; but when an author has engaged the public attention, those who can add any thing to his illustration, communicate their discoveries, and time produces what had eluded diligence.

To time I have been obliged to resign many passages, which, though I did not understand them, will perhaps hereafter be explained; having, I hope, illustrated some, which others have neglected or mistaken, sometimes by short remarks, or marginal directions, such as every editor has added at his will, and often by comments more laborious than the matter will seem to deserve; but that which is most difficult is not always most important, and to an editor nothing is a trifle by which his author is obscured.

The poetical beauties or defects I have not been very diligent to observe. Some plays have more,

and some fewer judicial observations, not in proportion to their difference of merit, but because I gave this part of my design to chance and to caprice. The reader, I believe, is seldom pleased to find his opinion anticipated; it is natural to delight more in what we find or make, than in what we receive. Judgment, like other faculties, is improved by practice, and its advancement is hindered by submission to dictatorial decisions, as the memory grows torpid by the use of a table-book. Some initiation is however necessary; of all skill, part is infused by precept, and part is obtained by habit; I have therefore shewn so much as may enable the candidate of criticism to discover the rest.

To the end of most plays I have added short strictures, containing a general censure of faults, or praise of excellence; in which I know not how much I have concurred with the current opinion; but I have not, by any affectation of singularity, deviated from it. Nothing is minutely and particularly examined, and therefore it is to be supposed, that in the plays which are condemned there is much to be praised, and in those which are praised much to be condemned.

The part of criticism in which the whole succession of editors has laboured with the greatest diligence, which has occasioned the most arrogant ostentation, and excited the keenest acrimony, is the emendation of corrupted passages, to which the public attention having been first drawn by the violence of the contention between Pope and Theobald, has been continued by the persecution, which,

with a kind of conspiracy, has been since raised against all the publishers of Shakespeare.

That many passages have passed in a state of depravation through all the editions, is indubitably certain; of these the restoration is only to be attempted by collation of copies, or sagacity of conjecture. The collator's province is safe and easy, the conjecturer's perilous and difficult. Yet as the greater part of the plays are extant only in one copy, the peril must not be avoided, nor the difficulty refused.

Of the readings which this emulation of amendment has hitherto produced, some from the labours of every publisher I have advanced into the text; those are to be considered as in my opinion sufficiently supported; some I have rejected without mention, as evidently erroneous; some I have left in the notes without censure or approbation, as resting in equipoise between objection and defence; and some, which seemed specious but not right, I have inserted with a subsequent animadversion.

Having classed the observations of others, I was at last to try what I could substitute for their mistakes, and how I could supply their omissions. I collated such copies as I could procure, and wished for more, but have not found the collectors of these rarities very communicative. Of the editions which chance or kindness put into my hands I have given an enumeration, that I may not be blamed for neglecting what I had not the power to do.

By examining the old copies, I soon found that the later publishers, with all their boasts of diligence,

suffered many passages to stand unauthorized, and contented themselves with Rowe's regulation of the text, even where they knew it to be arbitrary, and with a little consideration might have found it to be wrong. Some of these alterations are only the ejection of a word for one that appeared to him more elegant or more intelligible. These corruptions I have often silently rectified; for the history of our language, and the true force of our words, can only be preserved, by keeping the text of authors free from adulteration. Others, and those very frequent, smoothed the cadence, or regulated the measure: on these I have not exercised the same rigour; if only a word was transposed, or a particle inserted or omitted, I have sometimes suffered the line to stand; for the inconstancy of the copies such, as that some liberties may be easily permitted. But this practice I have not suffered to proceed far, having restored the primitive diction wherever it could for any reason be preferred.

The emendations, which comparison of copies supplied, I have inserted in the text: sometimes, where the improvement was slight, without notice, and sometimes with an account of the reasons of the change.

Conjecture, though it be sometimes unavoidable, I have not wantonly nor licentiously indulged. It has been my settled principle, that the reading of the ancient books is probably true, and therefore is not to be disturbed for the sake of elegance, perspicuity, or mere improvement of the sense. For though much credit is not due to the fidelity, nor any to the judgment of the first publishers, yet they who had the

copy before their eyes were more likely to read it right, than we who read it only by imagination. But it is evident that they have often made strange mistakes by ignorance or negligence, and that therefore something may be properly attempted by criticism, keeping the middle way between presumption and timidity.

Such criticism I have attempted to practise, and, where any passage appeared inextricably perplexed, have endeavoured to discover how it may be recalled to sense, with least violence. But my first labour is, always to turn the old text on every side, and try if there be any interstice, through which light can find its way; nor would Huetius himself condemn me, as refusing the trouble of research, for the ambition of alteration. In this modest industry I have not been unsuccessful. I have rescued many lines from the violations of temerity, and secured many scenes from the inroads of correction. I have adopted the Roman sentiment, that it is more honourable to save a citizen, than to kill an enemy, and have been more careful to protect than to attack.

I have preserved the common distribution of the plays into acts, though I believe it to be in almost all the plays void of authority. Some of those which are divided in the later editions have no division in the first folio, and some that are divided in the folio have no division in the preceding copies. The settled mode of the theatre requires four intervals in the play; but few, if any, of our author's compositions can be properly distributed in that manner. An act is so much of the drama as passes without interven-

tion of time, or change of place. A pause makes a new act. In every real, and therefore in every imitative action, the intervals may be more or fewer, the restriction of five acts being accidental and arbitrary. This Shakespeare knew, and this he practised; his plays were written, and at first printed in one unbroken continuity, and ought now to be exhibited with short pauses, interposed as often as the scene is changed, or any considerable time is required to pass. This method would at once quell a thousand absurdities.

In restoring the author's works to their integrity, I have considered the punctuation as wholly in my power; for what could be their care of colons and commas, who corrupted words and sentences? Whatever could be done by adjusting points, is therefore silently performed, in some plays with much diligence, in others with less; it is hard to keep a busy eye steadily fixed upon evanescent atoms, or a discursive mind upon evanescent truth.

The same liberty has been taken with a few particles, or other words of slight effect. I have sometimes inserted or omitted them without notice. I have done that sometimes, which the other editors have done always, and which indeed the state of the text may sufficiently justify.

The greater part of readers, instead of blaming us for passing trifles, will wonder that on mere trifles so much labour is expended, with such importance of debate, and such solemnity of diction. To these I answer with confidence, that they are judging of an art which they do not understand; yet cannot much reproach them with their ignorance, nor promise that

they would become in general, by learning criticism, more useful, happier, or wiser.

As I practised conjecture more, I learned to trust it less; and after I had printed a few plays, resolved to insert none of my own readings in the text. Upon this caution I now congratulate myself, for every day increases my doubt of my emendations.

Since I have confined my imagination to the margin, it must not be considered as very reprehensible, if I have suffered it to play some freaks in its own dominion. There is no danger in conjecture, if it be proposed as conjecture; and while the text remains uninjured, those changes may be safely offered, which are not considered even by him that offers them as necessary or safe.

If my readings are of little value, they have not been ostentatiously displayed or importunately obtruded. I could have written longer notes, for the art of writing notes is not of difficult attainment. The work is performed, first by railing at the stupidity, negligence, ignorance, and asinine tastelessness of the former editors, and shewing, from all that goes before and all that follows, the inelegance and absurdity of the old reading; then by proposing something, which to superficial readers would seem specious, but which the editor rejects with indignation; then by producing the true reading, with a long paraphrase, and concluding with loud acclamations on the discovery, and a sober wish for the advancement and prosperity of genuine criticism.

All this may be done, and perhaps done sometimes without impropriety. But I have always suspected

that the reading is right, which requires many words to prove it wrong, and the emendation wrong that cannot without so much labour appear to be right. The justness of a happy restoration strikes at once, and the moral precept may be well applied to criticism, *quod dubitas ne feceris*.

To dread the shore which he sees spread with wrecks, is natural to the sailor. I had before my eye so many critical adventures ended in miscarriage, that caution was forced upon me. I encountered in every page wit struggling with its own sophistry, and learning confused by the multiplicity of its views. I was forced to censure those whom I admired, and could not but reflect, while I was dispossessing their emendations, how soon the same fate might happen to my own, and how many of the readings which I have corrected may be by some other editor defended and established.

Critics I saw, that others' names efface,
 And fix their own, with labour, in the place;
 Their own, like others, soon their place resign'd,
 Or disappear'd, and left the first behind.—POPE.

That a conjectural critic should often be mistaken, cannot be wonderful, either to others or himself, if it be considered, that in his art there is no system, no principal and axiomatical truth that regulates subordinate positions. His chance of error is renewed at every attempt; an oblique view of the passage, a slight misapprehension of a phrase, a casual inattention to the parts connected, is sufficient to make him not only fail, but fail ridiculously; and when he succeeds best, he produces perhaps but one reading of many proba-

ble, and he that suggests another will always be able to dispute his claims.

It is an unhappy state, in which danger is hid under pleasure. The allurements of emendation are scarcely resistible. Conjecture has all the joy and all the pride of invention, and he that has once started a happy change, is too much delighted to consider what objections may rise against it.

Yet conjectural criticism has been of great use in the learned world; nor is it my intention to depreciate a study, that has exercised so many mighty minds, from the revival of learning to our own age, from the bishop of Aleria to English Bentley. The critics on ancient authors have, in the exercise of their sagacity, many assistances, which the editor of Shakespeare is condemned to want. They are employed upon grammatical and settled languages, whose construction contributes so much to perspicuity, that Homer has fewer passages unintelligible than Chaucer. The words have not only a known regimen, but invariable quantities, which direct and confine the choice. There are commonly more manuscripts than one; and they do not often conspire in the same mistakes. Yet Scaliger could confess to Salmasius how little satisfaction his emendations gave him. *Illudunt nobis conjecturæ nostræ, quarum nos pudet, posteaquam in meliores codices incidimus.* And Lipsius could complain, that critics were making faults, by trying to remove them, *Ut olim vitiiis, ita nunc remediis laboratur.* And, indeed, where mere conjecture is to be used, the emendations of Scaliger and Lipsius, notwithstanding their wonderful sagacity and erudition, are often vague and disputable, like mine or Theobald's.

Perhaps I may not be more censured for doing wrong, than for doing little ; for raising in the public, expectations which at last I have not answered. The expectation of ignorance is indefinite, and that of knowledge is often tyrannical. It is hard to satisfy those who know not what to demand, or those who demand by design what they think impossible to be done. I have indeed disappointed no opinion more than my own ; yet I have endeavoured to perform my task with no slight solicitude. Not a single passage in the whole work has appeared to me corrupt, which I have not attempted to restore ; or obscure, which I have not endeavoured to illustrate. In many I have failed, like others ; and from many, after all my efforts, I have retreated, and confessed the repulse. I have not passed over, with affected superiority, what is equally difficult to the reader and to myself, but, where I could not instruct him, have owned my ignorance. I might easily have accumulated a mass of seeming learning upon easy scenes ; but it ought not to be imputed to negligence, that, where nothing is necessary, nothing has been done, or that, where others have said enough, I have said no more.

Notes are often necessary, but they are necessary evils. Let him, that is yet unacquainted with the powers of Shakespeare, and who desires to feel the highest pleasure that the drama can give, read every play, from the first scene to the last, with utter negligence of all his commentators. When his fancy is once on the wing, let it not stoop at correction or explanation. When his attention is strongly engaged,

let it disdain alike to turn aside to the name of Theobald and of Pope. Let him read on through brightness and obscurity, through integrity and corruption; let him preserve his comprehension of the dialogue and his interest in the fable. And when the pleasures of novelty have ceased, let him attempt exactness, and read the commentators.

Particular passages are cleared by notes, but the general effect of the work is weakened. The mind is refrigerated by interruption; the thoughts are diverted from the principal subject; the reader is weary, he suspects not why; and at last throws away the book which he has too diligently studied.

Parts are not to be examined till the whole has been surveyed; there is a kind of intellectual remoteness necessary for the comprehension of any great work in its full design, and in its true proportions; a close approach shews the smaller niceties, but the beauty of the whole is discerned no longer.

It is not very grateful to consider how little the succession of editors has added to this author's power of pleasing. He was read, admired, studied, and imitated, while he was yet deformed with all the improprieties which ignorance and neglect could accumulate upon him; while the reading was yet not rectified, nor his allusions understood; yet then did Dryden pronounce, that Shakespeare was the "man
" who, of all modern and perhaps ancient poets, had
" the largest and most comprehensive soul. All the
" images of nature were still present to him, and he
" drew them not laboriously, but luckily: when he
" describes any thing, you more than see it, you feel

“ it too. Those who accuse him to have wanted
“ learning, give him the greater commendation : he
“ was naturally learned : he needed not the spectacles
“ of books to read nature ; he looked inwards, and
“ found her there. I cannot say he is every where
“ alike ; were he so, I should do him injury to com-
“ pare him with the greatest of mankind. He is many
“ times flat and insipid ; his comic wit degenerating
“ into clenches, his serious swelling into bombast.
“ But he is always great, when some great occasion
“ is presented to him : no man can say, he ever had a
“ fit subject for his wit, and did not then raise him-
“ self as high above the rest of poets,

“ *Quantum lenta solent inter viburna cupressi.*”

It is to be lamented, that such a writer should want a commentary ; that his language should become obsolete, or his sentiments obscure. But it is vain to carry wishes beyond the condition of human things ; that which must happen to all, has happened to Shakespeare, by accident and time ; and more than has been suffered by any other writer since the use of types, has been suffered by him through his own negligence of fame, or perhaps by that superiority of mind, which despised its own performances, when it compared them with its powers, and judged those works unworthy to be preserved, which the critics of following ages were to contend for the fame of restoring and explaining.

Among these candidates of inferior fame, I am now to stand the judgment of the public ; and wish that

I could confidently produce my commentary as equal to the encouragement which I have had the honour of receiving. Every work of this kind is by its nature deficient, and I should feel little solicitude about the sentence, were it to be pronounced only by the skilful and the learned.

GENERAL OBSERVATIONS

ON THE

PLAYS OF SHAKESPEARE.

TEMPEST.

IT is observed of The Tempest, that its plan is regular; this the author of The Revisal* thinks, what I think too, an accidental effect of the story, not intended or regarded by our author. But whatever might be Shakespeare's intention in forming or adopting the plot, he has made it instrumental to the production of many characters, diversified with boundless invention, and preserved with profound skill in nature, extensive knowledge of opinions, and accurate observation of life. In a single drama are here exhibited princes, courtiers, and sailors, all speaking in their real characters. There is the agency of airy spirits, and of an earthly goblin; the operations of magic, the tumults of a storm, the adventures of a desert island, the native effusion of untaught affection, the punishment of guilt, and the final happiness of the pair for whom our passions and reason are equally interested.

* Mr. Heath, who wrote a revisal of Shakespeare's text, published in 8vo. circa 1760.

TWO GENTLEMEN OF VERONA.

In this play there is a strange mixture of knowledge and ignorance, of care and negligence. The versification is often excellent, the allusions are learned and just; but the author conveys his heroes by sea from one inland town to another in the same country; he places the emperor at Milan, and sends his young men to attend him, but never mentions him more; he makes Protheus, after an interview with Silvia, say he has only seen her picture; and, if we may credit the old copies, he has, by mistaking places, left his scenery inextricable. The reason of all this confusion seems to be, that he took his story from a novel, which he sometimes followed, and sometimes forsook, sometimes remembered, and sometimes forgot.

That this play is rightly attributed to Shakespeare, I have little doubt. If it be taken from him, to whom shall it be given? This question may be asked of all the disputed plays, except Titus Andronicus; and it will be found more credible, that Shakespeare might sometimes sink below his highest flights, than that any other should rise up to his lowest.

MERRY WIVES OF WINDSOR.

Of this play there is a tradition preserved by Mr. Rowe, that it was written at the command of queen Elizabeth, who was so delighted with the character of Falstaff, that she wished it to be diffused through more plays; but suspecting that it might pall by

continued uniformity, directed the poet to diversify his manner, by shewing him in love. No task is harder than that of writing to the ideas of another. Shakespeare knew what the queen, if the story be true, seems not to have known, that by any real passion of tenderness the selfish craft, the careless jollity, and the lazy luxury of Falstaff must have suffered so much abatement, that little of his former cast would have remained. Falstaff could not love, but by ceasing to be Falstaff. He could only counterfeit love, and his professions could be prompted, not by the hope of pleasure, but of money. Thus the poet approached as near as he could to the work enjoined him; yet having perhaps in the former plays completed his own idea, seems not to have been able to give Falstaff all his former power of entertainment.

This comedy is remarkable for the variety and number of the personages, who exhibit more characters appropriated and discriminated, than perhaps can be found in any other play.

Whether Shakespeare was the first that produced upon the English stage the effect of language distorted and depraved by provincial or foreign pronunciation, I cannot certainly decide. This mode of forming ridiculous characters can confer praise only on him, who originally discovered it, for it requires not much of either wit or judgment: its success must be derived almost wholly from the player, but its power in a skilful mouth, even he that despises it, is unable to resist.

The conduct of this drama is deficient; the action begins and ends often before the conclusion, and the different parts might change places without incon-

venience; but its general power, that power by which all works of genius shall finally be tried, is such, that perhaps it never yet had reader or spectator, who did not think it too soon at an end.

MEASURE FOR MEASURE.

There is perhaps not one of Shakespeare's plays more darkened than this, by the peculiarities of its author, and the unskilfulness of its editors, by distortions of phrase, or negligence of transcription.

The novel of Giraldi Cynthio, from which Shakespeare is supposed to have borrowed this fable, may be read in *Shakespeare illustrated*, elegantly translated, with remarks, which will assist the inquirer to discover how much absurdity Shakespeare has admitted or avoided.

I cannot but suspect that some other had new-modelled the novel of Cynthio, or written a story which in some particulars resembled it, and that Cynthio was not the author whom Shakespeare immediately followed. The emperor in Cynthio is named Maximine; the duke, in Shakespeare's enumeration of the persons of the drama, is called Vincentio. This appears a very slight remark; but since the duke has no name in the play, nor is ever mentioned but by his title, why should he be called Vincentio among the persons, but because the name was copied from the story, and placed superfluously at the head of the list by the mere habit of transcription? It is therefore likely that there was then a story of Vincentio duke of Vienna, different from that of Maximine emperor of the Romans.

Of this play the light or comic part is very natural and pleasing, but the grave scenes, if a few passages be excepted, have more labour than elegance. The plot is rather intricate than artful. The time of the action is indefinite; some time, we know not how much, must have elapsed between the recess of the duke and the imprisonment of Claudio; for he must have learned the story of Mariana in his disguise, or he delegated his power to a man already known to be corrupted. The unities of action and place are sufficiently preserved.

LOVE'S LABOUR'S LOST.

In this play, which all the editors have concurred to censure, and some have rejected as unworthy of our poet, it must be confessed that there are many passages mean, childish, and vulgar; and some which ought not to have been exhibited, as we are told they were, to a maiden queen. But there are scattered through the whole many sparks of genius; nor is there any play that has more evident marks of the hand of Shakespeare.

MIDSUMMER NIGHT'S DREAM.

Wild and fantastical as this play is, all the parts in their various modes are well written, and give the kind of pleasure which the author designed. Fairies in his time were much in fashion; common tradition had made them familiar, and Spenser's poem had made them great.

MERCHANT OF VENICE.

It has been lately discovered, that this fable is taken from a story in the Pecorone of Giovanni Fiorentino, a novelist, who wrote in 1378. The story has been published in English, and I have epitomized the translation. The translator is of opinion, that the choice of the caskets is borrowed from a tale of Boccace, which I have likewise abridged, though I believe that Shakespeare must have had some other novel in view.

Of the MERCHANT of VENICE the style is even and easy, with few peculiarities of diction, or anomalies of construction. The comic part raises laughter, and the serious fixes expectation. The probability of either one or the other story cannot be maintained. The union of two actions in one event is in this drama eminently happy. Dryden was much pleased with his own address in connecting the two plots of his Spanish Friar, which yet, I believe, the critic will find excelled by this play.

AS YOU LIKE IT.

Of this play the fable is wild and pleasing. I know not how the ladies will approve the facility with which both Rosalind and Celia give away their hearts. To Celia much may be forgiven for the heroism of her friendship. The character of Jaques is natural and well preserved. The comic dialogue is very sprightly, with less mixture of low buffoonery than in some other plays; and the graver part is elegant and harmonious. By hastening to the end

of his work, Shakespeare suppressed the dialogue between the usurper and the hermit, and lost an opportunity of exhibiting a moral lesson in which he might have found matter worthy of his highest powers.

TAMING OF THE SHREW.

Of this play the two plots are so well united, that they can hardly be called two without injury to the art with which they are interwoven. The attention is entertained with all the variety of a double plot, yet is not distracted by unconnected incidents.

The part between Katharine and Petruchio is eminently sprightly and diverting. At the marriage of Bianca the arrival of the real father, perhaps, produces more perplexity than pleasure. The whole play is very popular and diverting.

ALL'S WELL THAT ENDS WELL.

This play has many delightful scenes, though not sufficiently probable, and some happy characters, though not new, nor produced by any deep knowledge of human nature. Parolles is a boaster and a coward, such as has always been the sport of the stage, but perhaps never raised more laughter or contempt than in the hands of Shakespeare.

I cannot reconcile my heart to Bertram; a man noble without generosity, and young without truth; who marries Helen as a coward, and leaves her as a profligate: when she is dead by his unkindness, sneaks home to a second marriage, is accused by a

woman whom he has wronged, defends himself by falsehood, and is dismissed to happiness.

The story of Bertram and Diana had been told before of Mariana and Angelo, and, to confess the truth, scarcely merited to be heard a second time.

TWELFTH-NIGHT.

This play is in the graver part elegant and easy, and in some of the lighter scenes exquisitely humorous. Ague-cheek is drawn with great propriety, but his character is, in a great measure, that of natural fatuity, and is therefore not the proper prey of a satirist. The soliloquy of Malvolio is truly comic; he is betrayed to ridicule merely by his pride. The marriage of Olivia, and the succeeding perplexity, though well enough contrived to divert on the stage, wants credibility, and fails to produce the proper instruction required in the drama, as it exhibits no just picture of life.

WINTER'S TALE.

The story of this play is taken from the pleasant History of Dorastus and Fawnia, written by Robert Greene.

This play, as Dr. Warburton justly observes, is, with all its absurdities, very entertaining. The character of Autolycus is very naturally conceived, and strongly represented.

MACBETH.

This play is deservedly celebrated for the propriety of its fictions, and solemnity, grandeur, and variety of its action, but it has no nice discriminations of

the above remarks not for Bot. nec (fine an for diff 2nd referabls only)

X Mac

character; the events are too great to admit the influence of particular dispositions, and the course of the action necessarily determines the conduct of the agents.

The danger of ambition is well described; and I know not whether it may not be said, in defence of some parts which now seem improbable, that, in Shakespeare's time, it was necessary to warn credulity against vain and illusive predictions.

The passions are directed to their true end. Lady Macbeth is merely detested; and though the courage of Macbeth preserves some esteem, yet every reader rejoices at his fall.

KING JOHN.

The tragedy of King John, though not written with the utmost power of Shakespeare, is varied with a very pleasing interchange of incidents and characters. The lady's grief is very affecting; and the character of the bastard contains that mixture of greatness and levity which this author delighted to exhibit.

KING RICHARD II.

This play is extracted from the Chronicle of Holingshed, in which many passages may be found which Shakespeare has, with very little alteration, transplanted into his scenes; particularly a speech of the bishop of Carlisle in defence of king Richard's unalienable right, and immunity from human jurisdiction.

Jonson who, in his Catiline and Sejanus, has inserted many speeches from the Roman historians, was

perhaps induced to that practice by the example of Shakespeare, who had condescended sometimes to copy more ignoble writers. But Shakespeare had more of his own than Jonson, and if he sometimes was willing to spare his labour, shewed by what he performed at other times, that his extracts were made by choice or idleness rather than necessity.

This play is one of those which Shakespeare has apparently revised; but as success in works of invention is not always proportionate to labour, it is not finished at last with the happy force of some other of his tragedies, nor can be said much to affect the passions, or enlarge the understanding.

KING HENRY IV. PART II.

I fancy every reader, when he ends this play, cries out with Desdemona, "O most lame and impotent conclusion!" As this play was not, to our knowledge, divided into acts by the author, I could be content to conclude it with the death of Henry the Fourth.

In that Jerusalem shall Harry die.

These scenes, which now make the fifth act of Henry the Fourth, might then be the first of Henry the Fifth; but the truth is, that they do unite very commodiously to either play. When these plays were represented, I believe they ended as they are now ended in the books; but Shakespeare seems to have designed that the whole series of action from the beginning of Richard the Second, to the end of Henry the Fifth, should be considered by the reader as one work,

upon one plan, only broken into parts by the necessity of exhibition.

None of Shakespeare's plays are more read than the First and Second Parts of Henry the Fourth. Perhaps no author has ever in two plays afforded so much delight. The great events are interesting, for the fate of kingdoms depends upon them; the slighter occurrences are diverting, and, except one or two, sufficiently probable; the incidents are multiplied with wonderful fertility of invention, and the characters diversified with the utmost nicety of discernment, and the profoundest skill in the nature of man.

The prince, who is the hero both of the comic and tragic part, is a young man of great abilities and violent passions, whose sentiments are right, though his actions are wrong; whose virtues are obscured by negligence, and whose understanding is dissipated by levity. In his idle hours he is rather loose than wicked; and when the occasion forces out his latent qualities, he is great without effort, and brave without tumult. The trifler is roused into a hero, and the hero again reposes in the trifler. This character is great, original, and just.

Percy is a rugged soldier, choleric, and quarrelsome, and has only the soldier's virtues, generosity and courage.

But Falstaff, unimitated, unimitable Falstaff, how shall I describe thee? Thou compound of sense and vice; of sense which may be admired, but not esteemed; of vice which may be despised, but hardly detested. Falstaff is a character loaded with faults, and with those faults which naturally produce contempt. He is a thief and a glutton, a coward

and a boaster, always ready to cheat the weak, and prey upon the poor; to terrify the timorous, and insult the defenceless. At once obsequious and malignant, he satirizes in their absence those whom he lives by flattering. He is familiar with the prince only as an agent of vice, but of this familiarity he is so proud as not only to be supercilious and haughty with common men, but to think his interest of importance to the duke of Lancaster. Yet the man thus corrupt, thus despicable, makes himself necessary to the prince that despises him, by the most pleasing of all qualities, perpetual gaiety, by an unfailing power of exciting laughter, which is the more freely indulged, as his wit is not of the splendid or ambitious kind, but consists in easy scapes and sallies of levity, which make sport, but raise no envy. It must be observed, that he is stained with no enormous or sanguinary crimes, so that his licentiousness is not so offensive but that it may be borne for his mirth.

The moral to be drawn from this representation is, that no man is more dangerous than he that, with a will to corrupt, hath the power to please; and that neither wit nor honesty ought to think themselves safe with such a companion, when they see Henry seduced by Falstaff.

KING HENRY V.

This play has many scenes of high dignity, and many of easy merriment. The character of the king is well supported, except in his courtship, where he has neither the vivacity of Hal, nor the grandeur of Henry. The humour of Pistol is very happily conti-

nued : his character has perhaps been the model of all the bullies that have yet appeared on the English stage.

The lines given to the Chorus, have many admirers ; but the truth is, that in them a little may be praised, and much must be forgiven : nor can it be easily discovered why the intelligence given by the Chorus is more necessary in this play than in many others where it is omitted. The great defect of this play is the emptiness and narrowness of the last act, which a very little diligence might have easily avoided.

KING HENRY VI. PART I.

Of this play there is no copy earlier than that of the folio in 1623, though the two succeeding parts are extant in two editions in quarto. That the second and third parts were published without the first, may be admitted as no weak proof that the copies were surreptitiously obtained, and that the printers of that time gave the public those plays, not such as the author designed, but such as they could get them. That this play was written before the two others is indubitably collected from the series of events ; that it was written and played before Henry the Fifth is apparent, because in the epilogue there is mention made of this play, and not of the other parts :

Henry the sixth in swaddling bands crown'd king,
Whose state so many had the managing
That they lost France, and made his England bleed,
Which oft our stage hath shewn.

France is lost in this play. The two following contain, as the old title imports, the contention of the houses of York and Lancaster.

The second and third parts of Henry VI. were printed in 1600. When Henry V. was written, we know not, but it was printed likewise in 1600, and therefore before the publication of the first part: the first part of Henry VI. had been often shewn on the stage, and would certainly have appeared in its place had the author been the publisher.

KING HENRY VI. PART III.

The three parts of Henry VI. are suspected, by Mr. Theobald, of being supposititious, and are declared by Dr. Warburton, to be certainly not Shakespeare's. Mr. Theobald's suspicion arises from some obsolete words; but the phraseology is like the rest of our author's style, and single words, of which however I do not observe more than two, can conclude little.

Dr. Warburton gives no reason, but I suppose him to judge upon deeper principles and more comprehensive views, and to draw his opinion from the general effect and spirit of the composition, which he thinks inferior to the other historical plays.

From mere inferiority nothing can be inferred; in the productions of wit there will be inequality. Sometimes judgment will err, and sometimes the matter itself will defeat the artist. Of every author's works one will be the best, and one will be the worst. The colours are not equally pleasing, nor the attitudes equally graceful, in all the pictures of Titian or Reynolds.

Dissimilitude of style, and heterogeneousness of sentiment, may sufficiently show that a work does not really belong to the reputed author. But in these plays no such marks of spuriousness are found. The diction, the versification, and the figures, are Shakespeare's. These plays, considered, without regard to characters and incidents, merely as narratives in verse, are more happily conceived, and more accurately finished than those of King John, Richard II. or the tragic scenes of Henry IV. and V. If we take these plays from Shakespeare, to whom shall they be given? What author of that age had the same easiness of expression and fluency of numbers?

Having considered the evidence given by the plays themselves, and found it in their favour, let us now inquire what corroboration can be gained from other testimony. They are ascribed to Shakespeare by the first editors, whose attestation may be received in questions of fact, however unskillfully they superintended their edition. They seem to be declared genuine by the voice of Shakespeare himself, who refers to the second play in his epilogue to Henry V. and apparently connects the first act of Richard III. with the last of the third part of Henry VI. If it be objected, that the plays were popular, and that therefore he alluded to them as well known; it may be answered, with equal probability, that the natural passions of a poet would have disposed him to separate his own works from those of an inferior hand. And, indeed, if an author's own testimony is to be overthrown by speculative

criticism, no man can be any longer secure of literary reputation.

Of these three plays I think the second the best. The truth is, that they have not sufficient variety of action, for the incidents are too often of the same kind; yet many of the characters are well discriminated. King Henry, and his queen, king Edward, the duke of Gloucester, and the earl of Warwick, are very strongly and distinctly painted.

The old copies of the two latter parts of Henry VI. and of Henry V. are so apparently imperfect and mutilated, that there is no reason for supposing them the first draughts of Shakespeare. I am inclined to believe them copies taken by some auditor who wrote down, during the representation, what the time would permit, then perhaps filled up some of his omissions at a second or third hearing, and when he had by this method formed something like a play, sent it to the printer.

KING RICHARD III.

This is one of the most celebrated of our author's performances; yet I know not whether it has not happened to him as to others, to be praised most, when praise is not most deserved. That this play has scenes noble in themselves, and very well contrived to strike in the exhibition, cannot be denied. But some parts are trifling, others shocking, and some improbable.

I have nothing to add to the observations of the learned critics, but that some traces of this antiquated exhibition are still retained in the rustic pup-

pet-plays, in which I have seen the Devil very lustily belaboured by Punch, whom I hold to be the legitimate successor of the old Vice.

KING HENRY VIII.

The play of Henry the Eighth is one of those which still keeps possession of the stage by the splendor of its pageantry. The coronation, about forty years ago, drew the people together in multitudes for a great part of the winter. Yet pomp is not the only merit of this play. The meek sorrows and virtuous distress of Katharine have furnished some scenes, which may be justly numbered among the greatest efforts of tragedy. But the genius of Shakespeare comes in and goes out with Katharine. Every other part may be easily conceived, and easily written.

The historical dramas are now concluded, of which the two parts of Henry the Fourth, and Henry the Fifth, are among the happiest of our author's compositions; and King John, Richard the Third, and Henry the Eighth, deservedly stand in the second class. Those whose curiosity would refer the historical scenes to their original, may consult Holingshed, and sometimes Hall: from Holingshed, Shakespeare has often inserted whole speeches with no more alteration than was necessary to the numbers of his verse. To transcribe them into the margin was unnecessary, because the original is easily examined, and they are seldom less perspicuous in the poet than in the historian.

To play histories, or to exhibit a succession of events by action and dialogue, was a common en-

ertainment among our rude ancestors upon great festivities. The parish clerks once performed at Clerkenwell a play which lasted three days, containing *The History of the World*.

CORIOLANUS.

The tragedy of *Coriolanus* is one of the most amusing of our author's performances. The old man's merriment in *Menenius*; the lofty lady's dignity in *Volumnia*; the bridal modesty in *Virgilia*; the patrician and military haughtiness in *Coriolanus*; the plebeian malignity, and tribunitian insolence in *Brutus* and *Sicinius*, make a very pleasing and interesting variety: and the various revolutions of the hero's fortune fill the mind with anxious curiosity. There is, perhaps, too much bustle in the first act, and too little in the last.

JULIUS CÆSAR.

Of this tragedy many particular passages deserve regard, and the contention and reconciliation of *Brutus* and *Cassius* is universally celebrated; but I have never been strongly agitated in perusing it, and think it somewhat cold and unaffecting, compared with some other of *Shakespeare's* plays; his adherence to the real story, and to *Roman* manners, seems to have impeded the natural vigour of his genius.

ANTONY AND CLEOPATRA.

This play keeps curiosity always busy, and the passions always interested. The continual hurry of the action, the variety of incidents, and the quick

Succession of one personage to another, call the mind forward without intermission from the first act to the last. But the power of delighting is derived principally from the frequent changes of the scene; for except the feminine arts, some of which are too low, which distinguish Cleopatra, no character is very strongly discriminated. Upton, who did not easily miss what he desired to find, has discovered that the language of Antony is, with great skill and learning, made pompous and superb, according to his real practice. But I think his diction not distinguishable from that of others: the most tumid speech in the play is that which Cæsar makes to Octavia.

The events, of which the principal are described according to history, are produced without any art of connexion or care of disposition.

TIMON OF ATHENS.

The play of Timon is a domestic tragedy, and therefore strongly fastens on the attention of the reader. In the plan there is not much art, but the incidents are natural, and the characters various and exact. The catastrophe affords a very powerful warning against that ostentatious liberality, which scatters bounty, but confers no benefits, and buys flattery, but not friendship.

In this tragedy, are many passages perplexed, obscure, and probably corrupt, which I have endeavoured to rectify, or explain, with due diligence; but having only one copy, cannot promise myself that my endeavours shall be much applauded.

TITUS ANDRONICUS.

All the editors and critics agree with Mr. Theobald in supposing this play spurious. I see no reason for differing from them; for the colour of the style is wholly different from that of the other plays, and there is an attempt at regular versification, and artificial closes, not always inelegant, yet seldom pleasing. The barbarity of the spectacles, and the general massacre, which are here exhibited, can scarcely be conceived tolerable to any audience; yet we are told by Jonson, that they were not only borne, but praised. That Shakespeare wrote any part, though Theobald declares it incontestable, I see no reason for believing:

The testimony produced at the beginning of this play, by which it is ascribed to Shakespeare, is by no means equal to the argument against its authenticity, arising from the total difference of conduct, language, and sentiments, by which it stands apart from all the rest. Meres had probably no other evidence, than that of a title-page, which, though in our time it be sufficient, was then of no great authority; for all the plays which were rejected by the first collectors of Shakespeare's works, and admitted in later editions, and again rejected by the critical editors, had Shakespeare's name on the title, as we must suppose, by the fraudulence of the printers, who, while there were yet no gazettes, nor advertisements, nor any means of circulating literary intelligence, could usurp at pleasure any celebrated name. Nor had Shakespeare any interest in detecting

the imposture, as none of his fame or profit was produced by the press.

The chronology of this play does not prove it not to be Shakespeare's. If it had been written twenty-five years in 1614, it might have been written when Shakespeare was twenty-five years old. When he left Warwickshire I know not; but at the age of twenty-five it was rather too late to fly for deer-stealing.

Ravenscroft, who in the reign of Charles II. revised this play, and restored it to the stage, tells us, in his preface, from a theatrical tradition, I suppose, which in his time might be of sufficient authority, that this play was touched in different parts by Shakespeare, but written by some other poet. I do not find Shakespeare's touches very discernible.

TROILUS AND CRESSIDA.

This play is more correctly written than most of Shakespeare's compositions, but it is not one of those in which either the extent of his views or elevation of his fancy is fully displayed. As the story abounded with materials, he has exerted little invention; but he has diversified his characters with great variety, and preserved them with great exactness. His vicious characters sometimes disgust, but cannot corrupt, for both Cressida and Pandarus are detested and contemned. The comic characters seem to have been the favourites of the writer; they are of the superficial kind, and exhibit more of manners than nature; but they are copiously filled, and powerfully impressed.

Shakespeare has in his story followed for the greater part the old book of Caxton, which was then very

popular; but the character of Thersites, of which it makes no mention, is a proof that this play was written after Chapman had published his version of Homer.

CYMBELINE.

This play has many just sentiments, some natural dialogues, and some pleasing scenes, but they are obtained at the expence of much incongruity. To remark the folly of the fiction, the absurdity of the conduct, the confusion of the names, and manners of different times, and the impossibility of the events in any system of life, were to waste criticism upon unresisting imbecility, upon faults too evident for detection, and too gross for aggravation.

KING LEAR.

The tragedy of Lear is deservedly celebrated among the dramas of Shakespeare. There is perhaps no play which keeps the attention so strongly fixed; which so much agitates our passions, and interests our curiosity. The artful involutions of distinct interests, the striking opposition of contrary characters, the sudden changes of fortune, and the quick succession of events, fill the mind with a perpetual tumult of indignation, pity, and hope. There is no scene which does not contribute to the aggravation of the distress or conduct of the action, and scarce a line which does not conduce to the progress of the scene. So powerful is the current of the poet's imagination, that the mind, which once ventures within it, is hurried irresistibly along.

On the seeming improbability of Lear's conduct, it may be observed, that he is represented according to histories at that time vulgarly received as true. And, perhaps, if we turn our thoughts upon the barbarity and ignorance of the age to which this story is referred, it will appear not so unlikely as while we estimate Lear's manners by our own. Such preference of one daughter to another, or resignation of dominion on such conditions, would be yet credible, if told of a petty prince of Guinea or Madagascar. Shakespeare, indeed, by the mention of his earls and dukes, has given us the idea of times more civilized, and of life regulated by softer manners; and the truth is, that though he so nicely discriminates, and so minutely describes the characters of men, he commonly neglects and confounds the characters of ages, by mingling customs ancient and modern, English and foreign.

My learned friend Mr. Warton, who has in the *Adventurer* very minutely criticised this play, remarks, that the instances of cruelty are too savage and shocking, and that the intervention of Edmund destroys the simplicity of the story. These objections may, I think, be answered, by repeating, that the cruelty of the daughters is an historical fact, to which the poet has added little, having only drawn it into a series by dialogue and action. But I am not able to apologize with equal plausibility for the extrusion of Gloster's eyes, which seems an act too horrid to be endured in dramatic exhibition, and such as must always compel the mind to relieve its distress by incredulity. Yet let it be remembered that our au-

thor well knew what would please the audience for which he wrote.

The injury done by Edmund to the simplicity of the action is abundantly recompensed by the addition of variety, by the art with which he is made to cooperate with the chief design, and the opportunity which he gives the poet of combining perfidy with perfidy, and connecting the wicked son with the wicked daughters, to impress this important moral, that villany is never at a stop, that crimes lead to crimes, and at last terminate in ruin.

But though this moral be incidentally enforced, Shakespeare has suffered the virtue of Cordelia to perish in a just cause, contrary to the natural ideas of justice, to the hope of the reader, and, what is yet more strange, to the faith of chronicles. Yet this conduct is justified by *The Spectator*, who blames Tate for giving Cordelia success and happiness in his alteration, and declares that, in his opinion, "the tragedy has lost half its beauty." Dennis has remarked, whether justly or not, that, to secure the favourable reception of *Cato*, "the town was poisoned with much false and abominable criticism," and that endeavours had been used to discredit and decry poetical justice. A play in which the wicked prosper, and the virtuous miscarry, may doubtless be good, because it is a just representation of the common events of human life: but since all reasonable beings naturally love justice, I cannot easily be persuaded that the observation of justice makes a play worse; or that, if other excellencies are equal, the audience will not always rise better pleased from the final triumph of persecuted virtue.

In the present case the public has decided. Cordelia, from the time of Tate, has always retired with victory and felicity. And, if my sensations could add any thing to the general suffrage, I might relate, I was many years ago so shocked by Cordelia's death, that I know not whether I ever endured to read again the last scenes of the play till I undertook to revise them as an editor.

There is another controversy among the critics concerning this play. It is disputed whether the predominant image in Lear's disordered mind be the loss of his kingdom or the cruelty of his daughters. Mr. Murphy, a very judicious critic, has evinced by induction of particular passages, that the cruelty of his daughters is the primary source of his distress, and that the loss of royalty affects him only as a secondary and subordinate evil. He observes with great justice, that Lear would move our compassion but little, did we not rather consider the injured father than the degraded king.

The story of this play, except the episode of Edmund, which is derived, I think, from Sidney, is taken originally from Geoffry of Monmouth, whom Holingshed generally copied; but perhaps immediately from an old historical ballad. My reason for believing that the play was posterior to the ballad, rather than the ballad to the play, is, that the ballad has nothing of Shakespeare's nocturnal tempest, which is too striking to have been omitted, and that it follows the chronicle; it has the rudiments of the play, but none of its amplifications: it first hinted Lear's madness, but did not array it in circumstances. The writer of the ballad added something to the history,

which is a proof that he would have added more, if more had occurred to his mind, and more must have occurred if he had seen Shakespeare.

ROMEO AND JULIET.

This play is one of the most pleasing of our author's performances. The scenes are busy and various, the incidents numerous and important, the catastrophe irresistibly affecting, and the process of the action carried on with such probability, at least with such congruity to popular opinions, as tragedy requires.

Here is one of the few attempts of Shakespeare to exhibit the conversation of gentlemen, to represent the airy sprightliness of juvenile elegance. Mr. Dryden mentions a tradition, which might easily reach his time, of a declaration made by Shakespeare, that "he was obliged to kill Mercutio in the third act, lest he should have been killed by him." Yet he thinks him "no such formidable person, but that he might have lived through the play, and died in his bed," without danger to a poet. Dryden well knew, had he been in quest of truth, that, in a pointed sentence, more regard is commonly had to the words than the thought, and that it is very seldom to be rigorously understood. Mercutio's wit, gaiety, and courage, will always procure him friends that wish him a longer life; but his death is not precipitated, he has lived out the time allotted him in the construction of the play; nor do I doubt the ability of Shakespeare to have continued his existence, though some

of his sallies are perhaps out of the reach of Dryden; whose genius was not very fertile of merriment, nor ductile to humour, but acute, argumentative, comprehensive, and sublime.

The Nurse is one of the characters in which the author delighted; he has, with great subtilty of distinction, drawn her at once loquacious and secret, obsequious and insolent, trusty and dishonest.

His comic scenes are happily wrought, but his pathetic strains are always polluted with some unexpected depravations. His persons, however distressed, *have a conceit left them in their misery, a miserable conceit.*

HAMLET.

If the dramas of Shakespeare were to be characterised, each by the particular excellence which distinguishes it from the rest, we must allow to the tragedy of Hamlet the praise of variety. The incidents are so numerous, that the argument of the play would make a long tale. The scenes are interchangeably diversified with merriment and solemnity; with merriment, that includes judicious and instructive observations; and solemnity, not strained by poetical violence above the natural sentiments of man. New characters appear from time to time in continual succession, exhibiting various forms of life and particular modes of conversation. The pretended madness of Hamlet causes much mirth, the mournful distraction of Ophelia fills the heart with tenderness, and every personage produces the effect intended, from the apparition that in the first act chills the blood with hor-

ror, to the fop in the last, that exposes affectation to just contempt.

The conduct is perhaps not wholly secure against objections. The action is indeed for the most part in continual progression, but there are some scenes which neither forward nor retard it. Of the feigned madness of Hamlet there appears no adequate cause, for he does nothing which he might not have done with the reputation of sanity. He plays the madman most, when he treats Ophelia with so much rudeness, which seems to be useless and wanton cruelty.

Hamlet is, through the whole piece, rather an instrument than an agent. After he has, by the stratagem of the play, convicted the king, he makes no attempt to punish him; and his death is at last effected by an incident which Hamlet had no part in producing.

The catastrophe is not very happily produced; the exchange of weapons is rather an expedient of necessity, than a stroke of art. A scheme might easily have been formed to kill Hamlet with the dagger, and Laertes with the bowl.

The poet is accused of having shewn little regard to poetical justice, and may be charged with equal neglect of poetical probability. The apparition left the regions of the dead to little purpose; the revenge which he demands is not obtained, but by the death of him that was required to take it; and the gratification, which would arise from the destruction of an usurper and a murderer, is abated by the untimely death of Ophelia, the young, the beautiful, the harmless, and the pious.

OTHELLO.

The beauties of this play impress themselves so strongly upon the attention of the reader, that they can draw no aid from critical illustration. The fiery openness of Othello, magnanimous, artless, and credulous, boundless in his confidence, ardent in his affection, inflexible in his resolution, and obdurate in his revenge; the cool malignity of Iago, silent in his resentment, subtle in his designs, and studious at once of his interest and his vengeance; the soft simplicity of Desdemona, confident of merit, and conscious of innocence, her artless perseverance in her suit, and her slowness to suspect that she can be suspected, are such proofs of Shakespeare's skill in human nature, as, I suppose, it is vain to seek in any modern writer. The gradual progress which Iago makes in the Moor's conviction, and the circumstances which he employs to inflame him, are so artfully natural, that, though it will perhaps not be said of him as he says of himself, that he is *a man not easily jealous*, yet we cannot but pity him, when at last we find him *perplexed in the extreme*.

There is always danger, lest wickedness, conjoined with abilities, should steal upon esteem, though it misses of approbation; but the character of Iago is so conducted, that he is from the first scene to the last hated and despised.

Even the inferior characters of this play would be very conspicuous in any other piece, not only for their justness, but their strength. Cassio is brave, benevolent, and honest, ruined only by his want of stubborn-

ness to resist an insidious invitation. Roderigo's suspicious credulity, and impatient submission to the cheats which he sees practised upon him, and which by persuasion he suffers to be repeated, exhibit a strong picture of a weak mind betrayed by unlawful desires to a false friend; and the virtue of Æmilia is such as we often find worn loosely, but not cast off, easy to commit small crimes, but quickened and alarmed at atrocious villanies.

The scenes from the beginning to the end are busy, varied by happy interchanges, and regularly promoting the progression of the story; and the narrative in the end, though it tells but what is known already, yet is necessary to produce the death of Othello.

Had the scene opened in Cyprus, and the preceding incidents been occasionally related, there had been little wanting to a drama of the most exact and scrupulous regularity.

AN
ACCOUNT
OF THE
HARLEIAN LIBRARY.

TO solicit a subscription for a catalogue of books exposed to sale, is an attempt for which some apology cannot but be necessary; for few would willingly contribute to the expence of volumes, by which neither instruction nor entertainment could be afforded, from which only the bookseller could expect advantage, and of which the only use must cease, at the dispersion of the library.

Nor could the reasonableness of an universal rejection of our proposal be denied, if this catalogue were to be compiled with no other view, than that of promoting the sale of the books which it enumerates, and drawn up with that inaccuracy and confusion which may be found in those that are daily published.

But our design, like our proposal, is uncommon, and to be prosecuted at a very uncommon expence; it being intended, that the books shall be distributed into their distinct classes, and every class ranged with some regard to the age of the writers; that every

book shall be accurately described; that the peculiarities of editions shall be remarked, and observations from the authors of literary history occasionally interspersed; that, by this catalogue, we may inform posterity of the excellence and value of this great collection, and promote the knowledge of scarce books, and elegant editions. For this purpose men of letters are engaged, who cannot even be supplied with amanuenses, but at an expence above that of a common catalogue.

To shew that this collection deserves a particular degree of regard from the learned and the studious, that it excels any library that was ever yet offered to public sale in the value as well as number of the volumes which it contains; and that therefore this catalogue will not be of less use to men of letters, than those of the Thuanian, Heinsian, or Barberinian libraries, it may not be improper to exhibit a general account of the different classes, as they are naturally divided by the several sciences.

By this method we can indeed exhibit only a general idea, at once magnificent and confused; an idea of the writings of many nations, collected from distant parts of the world, discovered sometimes by chance, and sometimes by curiosity, amidst the rubbish of forsaken monasteries, and the repositories of ancient families, and brought hither from every part, as to the universal receptacle of learning.

It will be no displeasing effect of this account, if those, that shall happen to peruse it, should be inclined by it to reflect on the character of the late proprietors, and to pay some tribute of veneration

to their ardour for literature, to that generous and exalted curiosity which they gratified with incessant searches and immense expence, and to which they dedicated that time, and that superfluity of fortune, which many others of their rank employ in the pursuit of contemptible amusements, or the gratification of guilty passions. And, surely, every man, who considers learning as ornamental and advantageous to the community, must allow them the honour of public benefactors, who have introduced amongst us authors not hitherto well known, and added to the literary treasures of their native country.

That our catalogue will excite any other man to emulate the collectors of this library, to prefer books and manuscripts to equipage and luxury, and to forsake noise and diversion for the conversation of the learned, and the satisfaction of extensive knowledge, we are very far from presuming to hope; but shall make no scruple to assert, that, if any man should happen to be seized with such laudable ambition, he may find in this catalogue hints and informations which are not easily to be met with; he will discover, that the boasted Bodleian library is very far from a perfect model, and that even the learned Fabricius cannot completely instruct him in the early editions of the classic writers.

But the collectors of libraries cannot be numerous; and, therefore, catalogues cannot very properly be recommended to the public, if they had not a more general and frequent use, an use which every student has experienced, or neglected to his loss. By the means of catalogues only can it be known, what has been written on every part of learning, and the ha-

zard avoided of encountering difficulties which have already been cleared, discussing questions which have already been decided, and digging in mines of literature which former ages have exhausted.

How often this has been the fate of students, every man of letters can declare; and, perhaps, there are very few who have not sometimes valued as new discoveries, made by themselves, those observations, which have long since been published, and of which the world therefore will refuse them the praise; nor can the refusal be censured as any enormous violation of justice; for, why should they not forfeit by their ignorance, what they might claim by their sagacity?

To illustrate this remark by the mention of obscure names, would not much confirm it; and to vilify for this purpose the memory of men truly great, would be to deny them the reverence which they may justly claim from those whom their writings have instructed. May the shade at least, of one great English critic rest without disturbance; and may no man presume to insult his memory, who wants his learning, his reason, or his wit.

From the vexatious disappointment of meeting reproach, where praise is expected, every man will certainly desire to be secured; and therefore that book will have some claim to his regard, from which he may receive informations of the labours of his predecessors, such as a catalogue of the Harleian library will copiously afford him.

Nor is the use of catalogues of less importance to those whom curiosity has engaged in the study of literary history, and who think the intellectual revolutions of the world more worthy of their attention, than

the ravages of tyrants, the desolation of kingdoms, the rout of armies, and the fall of empires. Those who are pleased with observing the first birth of new opinions, their struggles against opposition, their silent progress under persecution, their general reception, and their gradual decline, or sudden extinction; those that amuse themselves with remarking the different periods of human knowledge, and observe how darkness and light succeed each other; by what accident the most gloomy nights of ignorance have given way in the dawn of science, and how learning has languished and decayed, for want of patronage and regard, or been overborne by the prevalence of fashionable ignorance, or lost amidst the tumults of invasion, and the storms of violence. All those who desire any knowledge of the literary transactions of past ages, may find in catalogues, like this at least, such an account as is given by annalists, and chronologers of civil history.

How the knowledge of the sacred writings has been diffused, will be observed from the catalogue of the various editions of the bible, from the first impression by Fust, in 1462, to the present time; in which will be contained the polyglot editions of Spain, France, and England, those of the original Hebrew, the Greek Septuagint, and the Latin Vulgate; with the versions which are now used in the remotest parts of Europe, in the country of the Grisons, in Lithuania, Bohemia, Finland, and Iceland.

With regard to the attempts of the same kind made in our own country, there are few whose expectations will not be exceeded by the number of English bibles, of which not one is forgotten, whether valuable for

the pomp and beauty of the impression, or for the notes with which the text is accompanied, or for any controversy or persecution that it produced, or for the peculiarity of any single passage. With the same care have the various editions of the book of common-prayer been selected, from which all the alterations which have been made in it may be easily remarked.

Amongst a great number of Roman missals and breviaries, remarkable for the beauty of their cuts and illuminations, will be found the Mosorabic missal and breviary, that raised such commotions in the kingdom of Spain.

The controversial treatises written in England, about the time of the Reformation, have been diligently collected, with a multitude of remarkable tracts, single sermons, and small treatises; which, however worthy to be preserved, are, perhaps, to be found in no other place.

The regard which was always paid, by the collectors of this library, to that remarkable period of time, in which the art of printing was invented, determined them to accumulate the ancient impressions of the fathers of the church; to which the later editions are added, lest antiquity should have seemed more worthy of esteem than accuracy.

History has been considered with the regard due to that study by which the manners are most easily formed, and from which the most efficacious instruction is received; nor will the most extensive curiosity fail of gratification in this library; from which no writers have been excluded, that relate either to the religious or civil affairs of any nation.

Not only those authors of ecclesiastical history have been procured, that treat of the state of religion in general, or deliver accounts of sects or nations, but those likewise who have confined themselves to particular orders of men in every church; who have related the original, and the rules of every society, or recounted the lives of its founder and its members; those who have deduced in every country the succession of bishops, and those who have employed their abilities in celebrating the piety of particular saints, or martyrs, or monks, or nuns.

The civil history of all nations has been amassed together; nor is it easy to determine which has been thought most worthy of curiosity.

Of France, not only the general histories and ancient chronicles, the accounts of celebrated reigns, and narratives of remarkable events, but even the memorials of single families, the lives of private men, the antiquities of particular cities, churches, and monasteries, the topography of provinces, and the accounts of laws, customs, and prescriptions, are here to be found.

The several states of Italy have, in this treasury, their particular historians, whose accounts are, perhaps, generally more exact, by being less extensive; and more interesting, by being more particular.

Nor has less regard been paid to the different nations of the Germanic empire, of which neither the Bohemians, nor Hungarians, nor Austrians, nor Bavarians, have been neglected; nor have their antiquities, however generally disregarded, been less studiously searched, than their present state.

The northern nations have supplied this collection, not only with history, but poetry, with Gothic antiquities, and Runic inscriptions; which at least have this claim to veneration, above the remains of the Roman magnificence, that they are the works of those heroes by whom the Roman empire was destroyed; and which may plead, at least in this nation, that they ought not to be neglected by those that owe to the men whose memories they preserve, their constitution, their properties, and their liberties.

The curiosity of these collectors extends equally to all parts of the world; nor did they forget to add to the northern the southern writers, or to adorn their collection with chronicles of Spain, and the conquest of Mexico.

Even of those nations with which we have less intercourse, whose customs are less accurately known, and whose history is less distinctly recounted, there are in this library repositied such accounts as the Europeans have been hitherto able to obtain; nor are the Mogul, the Tartar, the Turk, and the Saracen, without their historians.

That persons so inquisitive with regard to the transactions of other nations, should inquire yet more ardently after the history of their own, may be naturally expected; and, indeed, this part of the library is no common instance of diligence and accuracy. Here are to be found, with the ancient chronicles, and larger histories of Britain, the narratives of single reigns, and the accounts of remarkable revolutions, the topographical histories of counties, the pedigrees of families, the antiquities of churches and cities, the proceedings

of parliaments, the records of monasteries, and the lives of particular men, whether eminent in the church or the state, or remarkable in private life; whether exemplary for their virtues, or detestable for their crimes; whether persecuted for religion, or executed for rebellion.

That memorable period of the English history, which begins with the reign of king Charles the First, and ends with the Restoration, will almost furnish a library alone, such is the number of volumes, pamphlets, and papers, which were published by either party; and such is the care with which they have been preserved.

Nor is history without the necessary preparatives and attendants, geography and chronology: of geography, the best writers and delineators have been procured, and pomp and accuracy have both been regarded: the student of chronology may here find likewise those authors who searched the records of time, and fixed the periods of history.

With the historians and geographers may be ranked the writers of voyages and travels, which may be read here in the Latin, English, Dutch, German, French, Italian, and Spanish languages.

The laws of different countries, as they are in themselves equally worthy of curiosity with their history, have, in this collection, been justly regarded; and the rules by which the various communities of the world are governed, may be here examined and compared. Here are the ancient editions of the papal decretals, and the commentators on the civil law, the edicts of Spain, and the statutes of Venice.

But with particular industry have the various writers on the laws of our own country been collected, from the most ancient to the present time, from the bodies of the statutes to the minutest treatise; not only the reports, precedents, and readings of our own courts, but even the laws of our West-Indian colonies, will be exhibited in our catalogue.

But neither history nor law have been so far able to engross this library, as to exclude physic, philosophy, or criticism. Those have been thought, with justice, worthy of a place, who have examined the different species of animals, delineated their forms, or described their properties and instincts; or who have penetrated the bowels of the earth, treated on its different strata, and analyzed its metals; or who have amused themselves with less laborious speculations, and planted trees, or cultivated flowers.

Those that have exalted their thoughts above the minuter parts of the creation, who have observed the motions of the heavenly bodies, and attempted systems of the universe, have not been denied the honour which they deserved by so great an attempt, whatever has been their success. Nor have those mathematicians been rejected, who have applied their science to the common purposes of life; or those that have deviated into the kindred arts, of tactics, architecture, and fortification.

Even arts of far less importance have found their authors, nor have these authors been despised by the boundless curiosity of the proprietors of the Harleian library. The writers on horsemanship and fencing are more numerous, and more bulky, than could be

expected by those who reflect how seldom those excel in either, whom their education has qualified to compose books.

The admirer of Greek and Roman literature will meet, in this collection, with editions little known to the most inquisitive critics, and which have escaped the observation of those whose great employment has been the collation of copies; nor will he find only the most ancient editions of Faustus, Jenson, Spira, Sweynheim, and Pannartz, but the most accurate likewise and beautiful of Colinaeus, the Juntae, Plantin, Aldus, the Stephens', and Elzevir, with the commentaries and observations of the most learned editors.

Nor are they accompanied only with the illustrations of those who have confined their attempts to particular writers, but of those likewise who have treated on any part of the Greek or Roman antiquities, their laws, their customs, their dress, their buildings, their wars, their revenues, or the rites and ceremonies of their worship, and those that have endeavoured to explain any of their authors from their statues or their coins.

Next to the ancients, those writers deserve to be mentioned, who, at the restoration of literature, imitated their language and their style with so great success, or who laboured with so much industry to make them understood: such were Philephus and Politian, Scaliger and Buchanan, and the poets of the age of Leo the Tenth; these are likewise to be found in this library, together with the *Deliciae*, or collections of all nations.

Painting is so nearly allied to poetry, that it can-

not be wondered that those who have so much esteemed the one, have paid an equal regard to the other; and therefore it may be easily imagined, that the collection of prints is numerous in an uncommon degree; but surely, the expectation of every man will be exceeded, when he is informed that there are more than forty thousand engraven from Raphael, Titian, Guido, the Carraches, and a thousand others, by Nanteuil, Hollar, Collet, Edelinck, and Dorigny, and other engravers of equal reputation.

There is also a great collection of original drawings, of which three seem to deserve a particular mention; the first exhibits a representation of the inside of St. Peter's church at Rome; the second of that of St. John Lateran; and the third of the high altar of St. Ignatius; all painted with the utmost accuracy, in their proper colours.

As the value of this great collection may be conceived from this account, however imperfect, as the variety of subjects must engage the curiosity of men of different studies, inclinations, and employments, it may be thought of very little use to mention any slighter advantages, or to dwell on the decorations and embellishments which the generosity of the proprietors has bestowed upon it; yet, since the compiler of the Thuanian catalogue thought not even that species of elegance below his observation, it may not be improper to observe, that the Harleian library, perhaps, excels all others, not more in the number and excellence, than in the splendor of its volumes.

We may now surely be allowed to hope, that our catalogue will not be thought unworthy of the pub-

lic curiosity; that it will be purchased as a record of this great collection, and preserved as one of the memorials of learning.

The patrons of literature will forgive the purchaser of this library, if he presumes to assert some claim to their protection and encouragement, as he may have been instrumental in continuing to this nation the advantage of it. The sale of Vossius's collection into a foreign country, is, to this day, regretted by men of letters; and if this effort for the prevention of another loss of the same kind should be disadvantageous to him, no man will hereafter willingly risk his fortune in the cause of learning.

AN
ESSAY
ON THE
ORIGIN AND IMPORTANCE
OF
SMALL TRACTS AND FUGITIVE PIECES.
WRITTEN FOR THE INTRODUCTION TO THE
HARLEIAN MISCELLANY.

THOUGH the scheme of the following Miscellany is so obvious, that the title alone is sufficient to explain it; and though several collections have been formerly attempted upon plans, as to the method, very little, but, as to the capacity and execution, very different from ours; we being possessed of the greatest variety for such a work, hope for a more general reception than those confined schemes had the fortune to meet with; and, therefore, think it not wholly unnecessary to explain our intentions, to display the treasure of materials out of which this miscellany is to be compiled, and to exhibit a general idea of the pieces which we intend to insert in it.

There is, perhaps, no nation in which it is so necessary, as in our own, to assemble from time

to time, the small tracts and fugitive pieces, which are occasionally published; for, besides the general subjects of inquiry, which are cultivated by us, in common with every other learned nation, our constitution in church and state naturally gives birth to a multitude of performances, which would either not have been written, or could not have been made public in any other place.

The form of our government, which gives every man, that has leisure, or curiosity, or vanity, the right of inquiring into the propriety of public measures, and, by consequence, obliges those who are intrusted with the administration of national affairs, to give an account of their conduct to almost every man who demands it, may be reasonably imagined to have occasioned innumerable pamphlets, which would never have appeared under arbitrary governments, where every man lulls himself in indolence under calamities, of which he cannot promote the redress, or thinks it prudent to conceal the uneasiness, of which he cannot complain without danger.

The multiplicity of religious sects tolerated among us, of which every one has found opponents and vindicators, is another source of unexhaustible publication, almost peculiar to ourselves; for controversies cannot be long continued, nor frequently revived, where an inquisitor has a right to shut up the disputants in dungeous; or where silence can be imposed on either party, by the refusal of a licence.

Not that it should be inferred from hence, that political or religious controversies are the only products of the liberty of the British press; the mind once let

loose to inquiry, and suffered to operate without restraint, necessarily deviates into peculiar opinions, and wanders in new tracts, where she is indeed sometimes lost in a labyrinth, from which though she cannot return, and scarce knows how to proceed; yet, sometimes, makes useful discoveries, or finds out nearer paths to knowledge.

The boundless liberty with which every man may write his own thoughts, and the opportunity of conveying new sentiments to the public, without danger of suffering either ridicule or censure, which every man may enjoy, whose vanity does not incite him too hastily to own his performances, naturally invites those who employ themselves in speculation, to try how their notions will be received by a nation, which exempts caution from fear, and modesty from shame; and it is no wonder, that where reputation may be gained, but needs not be lost, multitudes are willing to try their fortune, and thrust their opinions into the light; sometimes with unsuccessful haste, and sometimes with happy temerity.

It is observed, that, among the natives of England, is to be found a greater variety of humour, than in any other country; and, doubtless, where every man has a full liberty to propagate his conceptions, variety of humour must produce variety of writers; and, where the number of authors is so great, there cannot but be some worthy of distinction.

All these, and many other causes, too tedious to be enumerated, have contributed to make pamphlets

and small tracts a very important part of an English library; nor are there any pieces, upon which those, who aspire to the reputation of judicious collectors of books, bestow more attention, or greater expence; because many advantages may be expected from the perusal of these small productions, which are scarcely to be found in that of larger works.

If we regard history, it is well known, that most political treatises have for a long time appeared in this form, and that the first relations of transactions, while they are yet the subject of conversation, divide the opinions, and employ the conjectures of mankind, are delivered by these petty writers, who have opportunities of collecting the different sentiments of disputants, of inquiring the truth from living witnesses, and of copying their representations from the life; and, therefore, they preserve a multitude of particular incidents, which are forgotten in a short time, or omitted in formal relations, and which are yet to be considered as sparks of truth, which, when united, may afford light in some of the darkest scenes of state, as we doubt not, will be sufficiently proved in the course of this miscellany; and which it is, therefore, the interest of the public to preserve unextinguished.

The same observation may be extended to subjects of yet more importance. In controversies that relate to the truths of religion, the first essays of reformation are generally timorous; and those who have opinions to offer, which they expect to be opposed, produce their sentiments, by degrees, and, for the most part, in small tracts: by degrees, that they may not shock their readers with too many novelties at once; and in

small tracts, that they may be easily dispersed, or privately printed: almost every controversy, therefore, has been, for a time, carried on in pamphlets, nor has swelled into larger volumes, till the first ardor of the disputants has subsided, and they have recollected their notions with coolness enough to digest them into order, consolidate them into systems, and fortify them with authorities.

From pamphlets, consequently, are to be learned the progress of every debate; the various states to which the questions have been changed; the artifices and fallacies which have been used, and the subterfuges by which reason has been eluded: in such writings may be seen how the mind has been opened by degrees, how one truth has led to another, how error has been disentangled, and hints improved to demonstration, which pleasure, and many others, are lost by him that only reads the larger writers, by whom these scattered sentiments are collected, who will see none of the changes of fortune which every opinion has passed through, will have no opportunity of remarking the transient advantages which error may sometimes obtain, by the artifices of its patron, or the successful rallies by which truth regains the day, after a repulse; but will be to him, who traces the dispute through its particular gradations, as he that hears of a victory, to him that sees the battle.

Since the advantages of preserving these small tracts are so numerous, our attempt to unite them in volumes cannot be thought either useless or unseasonable; for there is no other method of securing them

from accidents; and they have already been so long neglected, that this design cannot be delayed, without hazarding the loss of many pieces, which deserve to be transmitted to another age.

The practice of publishing pamphlets on the most important subjects, has now prevailed more than two centuries among us; and therefore it cannot be doubted, but that, as no large collections have been yet made, many curious tracts must have perished; but it is too late to lament that loss; nor ought we to reflect upon it with any other view than that of quickening our endeavours for the preservation of those that yet remain; of which we have now a greater number than was, perhaps, ever amassed by any one person.

The first appearance of pamphlets among us, is generally thought to be at the new opposition raised against the errors and corruptions of the church of Rome. Those who were first convinced of the reasonableness of the new learning, as it was then called, propagated their opinions in small pieces, which were cheaply printed; and, what was then of great importance, easily concealed. These treatises were generally printed in foreign countries, and are not, therefore, always very correct. There was not then that opportunity of printing in private; for the number of printers was small, and the presses were easily overlooked by the clergy, who spared no labour or vigilance for the suppression of heresy. There is, however, reason to suspect, that some attempts were made to carry on the propagation of truth by a secret press; for one of the first treatises in favour of the Reforma-

tion, is said, at the end, to be printed at Greenwich, *by the permission of the Lord of Hosts.*

In the time of king Edward the Sixth, the presses were employed in favour of the reformed religion, and small tracts were dispersed over the nation, to reconcile them to the new forms of worship. In this reign, likewise, political pamphlets may be said to have been begun, by the address of the rebels of Devonshire; all which means of propagating the sentiments of the people so disturbed the court, that no sooner was queen Mary resolved to reduce her subjects to the Romish superstition, but she artfully, by a charter*, granted to certain freemen of London, in whose fidelity, no doubt, she confided, entirely prohibited *all* presses, but what should be licensed by them; which charter is that by which the corporation of Stationers in London is at this time incorporated.

Under the reign of queen Elizabeth, when liberty again began to flourish, the practice of writing pamphlets became more general; presses were multiplied, and books were dispersed; and, I believe, it may properly be said, that the trade of writing began at that time, and that it has ever since gradually increased in the number, though, perhaps, not in the style of those that followed it.

In this reign was erected the first *secret* press against the church as now established, of which I have found any certain account. It was employed by the Puri-

* Which begins thus, 'Know ye, that We, considering and manifestly perceiving, that several seditious and heretical books or tracts—against the faith and sound catholic doctrine of holy mother, the church,' &c.

tans, and conveyed from one part of the nation to another, by them, as they found themselves in danger of discovery. From this press issued most of the pamphlets against Whitgift and his associates, in the ecclesiastical government; and, when it was at last seized at Manchester, it was employed upon a pamphlet called *More Work for a Cooper*.

In the peaceable reign of king James, those minds which might, perhaps, with less disturbance of the world, have been engrossed by war, were employed in controversy; and writings of all kinds were multiplied among us. The press, however, was not wholly engaged in polemical performances, for more innocent subjects were sometimes treated; and it deserves to be remarked, because it is not generally known, that the treatises of Husbandry and Agriculture, which were published about that time, are so numerous, that it can scarcely be imagined by whom they were written, or to whom they were sold.

The next reign is too well known to have been a time of confusion, and disturbance, and disputes of every kind; and the writings, which were produced, bear a natural proportion to the number of questions that were discussed at that time; each party had its authors and its presses, and no endeavours were omitted to gain proselytes to every opinion. I know not whether this may not properly be called, *The Age of Pamphlets*; for, though they, perhaps, may not arise to such multitudes as Mr. Rawlinson imagined, they were, undoubtedly, more numerous than can be conceived by any who have not had an opportunity of examining them.

After the Restoration, the same differences, in religious opinions, are well known to have subsisted, and the same political struggles to have been frequently renewed; and, therefore, a great number of pens were employed, on different occasions, till, at length, all other disputes were absorbed in the popish controversy.

From the pamphlets which these different periods of time produced, it is proposed, that this miscellany shall be compiled; for which it cannot be supposed that materials will be wanting; and, therefore, the only difficulty will be in what manner to dispose them.

Those who have gone before us, in undertakings of this kind, have ranged the pamphlets, which chance threw into their hands, without any regard either to the subject on which they treated, or the time in which they were written; a practice in no wise to be imitated by us, who want for no materials; of which we shall choose those we think best for the particular circumstances of times and things, and most instructing and entertaining to the reader.

Of the different methods which present themselves, upon the first view of the great heaps of pamphlets which the Harleian library exhibits, the two which merit most attention are, to distribute the treatises according to their subjects, or their dates; but neither of these ways can be conveniently followed. By ranging our collection in order of time, we must necessarily publish those pieces first, which least engage the curiosity of the bulk of mankind; and our design must fall to the ground, for want of encouragement, before it can be so far advanced as to obtain general regard:

by confining ourselves for any long time to any single subject, we shall reduce our readers to one class; and, as we shall lose all the grace of variety, shall disgust all those who read chiefly to be diverted. There is likewise one objection of equal force, against both these methods, that we shall preclude ourselves from the advantage of any future discoveries; and we cannot hope to assemble at once all the pamphlets which have been written in any age, or on any subject.

It may be added, in vindication of our intended practice, that it is the same with that of Photius, whose collections are no less miscellaneous than ours; and who declares, that he leaves it to his reader, to reduce his extracts under their proper heads.

Most of the pieces which shall be offered in this collection to the public, will be introduced by short prefaces, in which will be given some account of the reasons for which they are inserted; notes will be sometimes adjoined, for the explanation of obscure passages, or obsolete expressions; and care will be taken to mingle use and pleasure through the whole collection. Notwithstanding every subject may not be relished by every reader; yet the buyer may be assured that each number will repay his generous subscription.

SOME ACCOUNT
OF A BOOK, CALLED
THE LIFE OF
BENVENUTO CELLINI.

THE original of this celebrated performance lay in manuscript above a century and a half. Though it was read with the greatest pleasure by the learned of Italy, no man was hardy enough, during so long a period, to introduce to the world a book in which the successors of St. Peter were handled so roughly: a narrative, where artists and sovereign princes, cardinals and courtesans, ministers of state and mechanics, are treated with equal impartiality.

At length, in the year 1730, an enterprising Neapolitan, encouraged by Dr. Antonio Cocchi, one of the politest scholars in Europe, published this so-much desired work in one volume quarto. The Doctor gave the editor an excellent preface, which with very slight alteration, is judiciously preserved by the translator, Dr. Nugent: the book is, notwithstanding, very scarce in Italy: the clergy of Naples are very powerful; and

though the editor very prudently put Colonia instead of Neapoli in the title-page, the sale of Cellini was prohibited; the court of Rome has actually made it an article in their Index Expurgatorius, and prevented the importation of the book into any country where the power of the Holy See prevails.

The life of Benvenuto Cellini is certainly a phenomenon in biography, whether we consider it with respect to the artist himself, or the great variety of historical facts which relate to others: it is indeed a very good supplement to the history of Europe, during the greatest part of the sixteenth century, more especially in what relates to painting, sculpture, and architecture, and the most eminent masters in those elegant arts, whose works Cellini praises or censures with peculiar freedom and energy.

As to the man himself, there is not perhaps a more singular character among the race of Adam: the admired Lord Herbert of Cherbury scarce equals Cellini in the number of peculiar qualities which separate him from the rest of the human species.

He is at once a man of pleasure, and a slave to superstition; a despiser of vulgar notions, and a believer in magical incantations; a fighter of duels, and a composer of divine sonnets; an ardent lover of truth, and a retailer of visionary fancies; an admirer of papal power, and a hater of popes; an offender against the laws, with a strong reliance on divine providence. If I may be allowed the expression, Cellini is one striking feature added to the human form—a prodigy to be wondered at, not an example to be imitated.

Though Cellini was so blind to his own imperfections as to commit the most unjustifiable actions, with a full persuasion of the goodness of his cause and the rectitude of his intention, yet no man was a keener and more accurate observer of the blemishes of others; hence his book abounds with sarcastic wit and satirical expression. Yet though his portraits are sometimes grotesque and over-charged, from misinformation, from melancholy, from infirmity, and from peculiarity of humour; in general it must be allowed that they are drawn from the life, and conformable to the idea given by cotemporary writers. His characters of pope Clement the seventh, Paul the third, and his bastard son Pier Luigi; Francis the first, and his favourite mistress madam d'Estampes; Cosmo duke of Florence, and his duchess, with many others, are touched by the hand of a master.

General history cannot descend to minute details of the domestic life and private transactions, the passions and foibles of great personages; but these give truer representations of their characters than all the elegant and laboured compositions of poets and historians.

To some a register of the actions of a statuary may seem a heap of uninteresting occurrences; but the discerning will not disdain the efforts of a powerful mind, because the writer is not ennobled by birth, or dignified by station.

The man who raises himself by consummate merit in his profession to the notice of princes, who converses with them in a language dictated by honest freedom, who scruples not to tell them those truths

which they must despair to hear from courtiers and favourites, from minions and parasites, is a bold leveller of distinctions in the courts of powerful monarchs. Genius is the parent of truth and courage; and these, united, dread no opposition.

The Tuscan language is greatly admired for its elegance, and the meanest inhabitants of Florence speak a dialect which the rest of Italy are proud to imitate. The style of Cellini, though plain and familiar, is vigorous and energetic. He possesses, to an uncommon degree, strength of expression, and rapidity of fancy. Dr. Nugent seems to have carefully studied his author, and to have translated him with ease and freedom, as well as truth and fidelity.

A

VIEW OF THE CONTROVERSY

BETWEEN

MONS. CROUSAZ AND MR. WARBURTON,

ON THE SUBJECT OF

MR. POPE'S ESSAY ON MAN.

IN A LETTER TO THE

EDITOR OF THE GENTLEMAN'S MAGAZINE, VOL. XIII.

MR. URBAN,

IT would not be found useless in the learned world, if in written controversies as in oral disputations, a moderator could be selected, who might in some degree superintend the debate, restrain all needless excursions, repress all personal reflections, and at last recapitulate the arguments on each side; and who, though he should not assume the province of deciding the question, might at least exhibit it in its true state.

This reflection arose in my mind upon the consideration of Mr. Crousaz's Commentary on the Essay on Man, and Mr. Warburton's Answer to it. The importance of the subject, the reputation and abilities of the controvertists, and perhaps the ardour

with which each has endeavoured to support his cause, have made an attempt of this kind necessary for the information of the greatest number of Mr. Pope's readers.

Among the duties of a moderator, I have mentioned that of recalling the disputants to the subject, and cutting off the excrescences of a debate, which Mr. Crousaz will not suffer to be long unemployed, and the repression of personal invectives, which have not been very carefully avoided on either part; and are less excusable, because it has not been proved that either the poet, or his commentator, wrote with any other design than that of promoting happiness by cultivating reason and piety.

Mr. Warburton has indeed so much depressed the character of his adversary, that before I consider the controversy between them, I think it necessary to exhibit some specimens of Mr. Crousaz's sentiments, by which it will probably be shewn, that he is far from deserving either indignation or contempt; that his notions are just, though they are sometimes introduced without necessity; and defended when they are not opposed; and that his abilities and parts are such as may entitle him to reverence from those who think his criticisms superfluous.

In page 35 of the English translation, he exhibits an observation which every writer ought to impress upon his mind, and which may afford a sufficient apology for his commentary.

On the notion of a ruling passion, he offers this remark: "Nothing so much hinders men from obtaining a complete victory over their ruling

“ passion, as that all the advantages gained in their
“ days of retreat, by just and sober reflections, whether
“ struck out by their own minds, or borrowed from
“ good books, or from the conversation of men of
“ merit, are destroyed in a few moments by a free
“ intercourse and acquaintance with libertines; and
“ thus the work is always to be begun anew. A
“ gamester resolves to leave off play, by which he
“ finds his health impaired, his family ruined, and
“ his passions inflamed; in this resolution he persists
“ a few days, but soon yields to an invitation, which
“ will give his prevailing inclination an opportunity
“ of reviving in all its force. The case is the same
“ with other men: but is reason to be charged with
“ these calamities and follies, or rather the man who
“ refuses to listen to its voice in opposition to imper-
“ tinent solicitations?”

On the means recommended for the attainment of happiness, he observes, “ that the abilities which
“ our Maker has given us, and the internal and
“ external advantages with which he has invested
“ us, are of two very different kinds; those of one
“ kind are bestowed in common upon us and the
“ brute creation, but the other exalt us far above
“ other animals. To disregard any of these gifts
“ would be ingratitude; but to neglect those of
“ greater excellence, to go no farther than the gross
“ satisfactions of sense, and the functions of mere ani-
“ mal life, would be a far greater crime. We are
“ formed by our Creator capable of acquiring know-
“ ledge, and regulating our conduct by reasonable
“ rules; it is therefore our duty to cultivate our un-

“ derstandings, and exalt our virtues. We need but
“ make the experiment to find, that the greatest plea-
“ sures will arise from such endeavours.

“ It is trifling to allege, in opposition to this truth,
“ that knowledge cannot be acquired, nor virtue pur-
“ sued, without toil and efforts, and that all efforts
“ produce fatigue. God requires nothing dispropor-
“ tioned to the powers he has given, and in the exer-
“ cise of those powers consists the highest satis-
“ faction.

“ Toil and weariness are the effects of vanity: when
“ a man has formed a design of excelling others in
“ merit, he is disquieted by their advances, and leaves
“ nothing unattempted, that he may step before
“ them: this occasions a thousand unreasonable emo-
“ tions, which justly bring their punishment along
“ with them.

“ But let a man study and labour to cultivate and
“ improve his abilities in the eye of his Maker,
“ and with the prospect of his approbation; let him
“ attentively reflect on the infinite value of that ap-
“ probation, and the highest encomiums that men can
“ bestow will vanish into nothing at the comparison.
“ When we live in this manner, we find that we live
“ for a great and glorious end.

“ When this is our frame of mind, we find it no
“ longer difficult to restrain ourselves in the gratifi-
“ cations of eating and drinking, the most gross en-
“ joyments of sense. We take what is necessary to
“ preserve health and vigour, but are not to give
“ ourselves up to pleasures that weaken the attention,
“ and dull the understanding.”

And the true sense of Mr. Pope's assertion, that *Whatever is, is right*, and I believe the sense in which it was written, is thus explained:—"A sacred and adorable order is established in the government of mankind. These are certain and unvaried truths: he that seeks God, and makes it his happiness to live in obedience to him, shall obtain what he endeavours after, in a degree far above his present comprehension. He that turns his back upon his Creator, neglects to obey him, and perseveres in his disobedience, shall obtain no other happiness than he can receive from enjoyments of his own procuring; void of satisfaction, weary of life, wasted by empty cares and remorse equally harassing and just, he will experience the certain consequences of his own choice. Thus will justice and goodness resume their empire, and that order be restored which men have broken."

I am afraid of wearying you or your readers with more quotations, but if you shall inform me that a continuation of my correspondence will be well received, I shall descend to particular passages, shew how Mr. Pope gave sometimes occasion to mistakes, and how Mr. Crousaz was misled by his suspicion of the system of fatality.

I am, SIR,

Your's, &c.

PRELIMINARY DISCOURSE

TO THE

LONDON CHRONICLE,

JANUARY 1, 1757.

IT has always been lamented, that of the little time allotted to man, much must be spent upon superfluities. Every prospect has its obstructions, which we must break to enlarge our view; every step of our progress finds impediments, which, however eager to go forward, we must stop to remove. Even those who profess to teach the way to happiness, have multiplied our incumbrances, and the author of almost every book retards his instructions by a preface.

The writers of the Chronicle hope to be easily forgiven, though they should not be free from an infection that has seized the whole fraternity, and instead of falling immediately to their subjects, should detain the reader for a time with an account of the importance of their design, the extent of their plan, and the accuracy of the method which they intend to prosecute. Such premonitions, though not always necessary when the reader has the book complete in his hand, and may find by his own eyes whatever can be found in it, yet may be more easily allowed to works

published gradually in successive parts, of which the scheme can only be so far known as the author shall think fit to discover it.

The paper which we now invite the public to add to the papers with which it is already rather wearied than satisfied, consists of many parts; some of which it has in common with other periodical sheets, and some peculiar to itself.

The first demand made by the reader of a journal is, that he should find an accurate account of foreign transactions and domestic incidents. This is always expected, but this is very rarely performed. Of those writers who have taken upon themselves the task of intelligence, some have given and others have sold their abilities, whether small or great, to one or other of the parties that divide us; and without a wish for truth or thought of decency, without care of any other reputation than that of a stubborn adherence to their abettors, carry on the same tenor of representation through all the vicissitudes of right and wrong, neither depressed by detection, nor abashed by confutation, proud of the hourly increase of infamy, and ready to boast of all the contumelies that falsehood and slander may bring upon them, as new proofs of their zeal and fidelity.

With these heroes we have no ambition to be numbered, we leave to the confessors of faction the merit of their sufferings, and are desirous to shelter ourselves under the protection of truth. That all our facts will be authentic, or all our remarks just, we dare not venture to promise: we can relate but what we hear, we can point out but what we see. Of remote transactions, the first accounts are always confused, and

commonly exaggerated: and in domestic affairs, if the power to conceal is less, the interest to misrepresent is often greater; and what is sufficiently vexatious, truth seems to fly from curiosity, and as many inquirers produce many narratives, whatever engages the public attention is immediately disguised by the embellishments of fiction. We pretend to no peculiar power of disentangling contradiction or denuding forgery, we have no settled correspondence with the Antipodes, nor maintain any spies in the cabinets of princes. But as we shall always be conscious that our mistakes are involuntary, we shall watch the gradual discoveries of time, and retract whatever we have hastily and erroneously advanced.

In the narratives of the daily writers every reader perceives somewhat of neatness and purity wanting, which at the first view it seems easy to supply; but it must be considered, that those passages must be written in haste, and that there is often no other choice, but that they must want either novelty or accuracy; and that as life is very uniform, the affairs of one week are so like those of another, that by any attempt after variety of expression, invention would soon be wearied, and language exhausted. Some improvements however we hope to make; and for the rest we think that when we commit only common faults, we shall not be excluded from common indulgence.

The accounts of prices of corn and stocks are to most of our readers of more importance than narratives of greater sound; and as exactness is here within the reach of diligence, our readers may justly require it from us.

Memorials of a private and personal kind, which relate deaths, marriages, and preferments, must always be imperfect by omission, and often erroneous by misinformation; but even in these there shall not be wanting care to avoid mistakes, or to rectify them whenever they shall be found.

That part of our work, by which it is distinguished from all others, is the literary journal, or account of the labours and productions of the learned. This was for a long time among the deficiencies of English literature; but as the caprice of man is always starting from too little to too much, we have now amongst other disturbers of human quiet, a numerous body of reviewers and remarkers.

Every art is improved by the emulation of competitors; those who make no advances towards excellence, may stand as warnings against faults. We shall endeavour to avoid that petulance which treats with contempt whatever has hitherto been reputed sacred. We shall repress that elation of malignity, which wantons in the cruelties of criticism, and not only murders reputation, but murders it by torture. Whenever we feel ourselves ignorant we shall at least be modest. Our intention is not to pre-occupy judgment by praise or censure, but to gratify curiosity by early intelligence, and to tell rather what our authors have attempted, than what they have performed. The titles of books are necessarily short, and therefore disclose but imperfectly the contents; they are sometimes fraudulent and intended to raise false expectations. In our account this brevity will be extended, and these frauds whenever they are detected

will be exposed; for though we write without intention to injure, we shall not suffer ourselves to be made parties to deceit.

If any author shall transmit a summary of his work, we shall willingly receive it; if any literary anecdote, or curious observation, shall be communicated to us, we will carefully insert it. Many facts are known and forgotten, many observations are made and suppressed; and entertainment and instruction are frequently lost, for want of a repository in which they may be conveniently preserved.

No man can modestly promise what he cannot ascertain: we hope for the praise of knowledge and discernment, but we claim only that of diligence and candour.

INTRODUCTION

TO THE

WORLD DISPLAYED*.

NAVIGATION, like other arts, has been perfected by degrees. It is not easy to conceive that any age or nation was without some vessel, in which rivers might be passed by travellers, or lakes frequented by fishermen; but we have no knowledge of any ship that could endure the violence of the ocean before the ark of Noah.

As the tradition of the deluge has been transmitted to almost all the nations of the earth; it must be supposed that the memory of the means by which Noah and his family were preserved, would be continued long among their descendants, and that the possibility of passing the seas could never be doubted.

What men know to be practicable, a thousand motives will incite them to try; and there is reason to believe, that from the time that the generations of the post-diluvian race spread to the sea shores, there were always navigators that ventured upon the sea, though, perhaps, not willingly beyond the sight of land.

Of the ancient voyages little certain is known, and it is not necessary to lay before the Reader such

* A Collection of Voyages and Travels, selected from the writers of all nations, in four small pocket volumes, and published by Newbery; to oblige whom, it is conjectured that Johnson drew up this curious and learned paper.

conjectures as learned men have offered to the world. The Romans by conquering Carthage, put a stop to great part of the trade of distant nations with one another, and because they thought only on war and conquest, as their empire increased, commerce was discouraged; till under the latter emperors, ships seem to have been of little other use than to transport soldiers.

Navigation could not be carried to any great degree of certainty without the compass, which was unknown to the ancients. The wonderful quality by which a needle or small bar of steel, touched with a loadstone or magnet, and turning freely by equilibration on a point, always preserves the meridian, and directs its two ends north and south, was discovered according to the common opinion in 1299, by John Gola of Amalfi, a town in Italy.

From this time it is reasonable to suppose that navigation made continual, though slow improvements, which the confusion and barbarity of the times, and the want of communication between orders of men so distant as sailors and monks, hindered from being distinctly and successively recorded.

It seems, however, that the sailors still wanted either knowledge or courage, for they continued for two centuries to creep along the coast, and considered every headland as unpassable, which ran far into the sea, and against which the waves broke with uncommon agitation.

The first who is known to have formed the design of new discoveries, or the first who had power to execute his purposes, was Don Henry the fifth, son of

John, the first king of Portugal, and Philippina, sister of Henry the fourth of England. Don Henry having attended his father to the conquest of Ceuta, obtained, by conversation with the inhabitants of the continent, some accounts of the interior kingdoms and southern coast of Africa; which, though rude and indistinct, were sufficient to raise his curiosity, and convince him, that there were countries yet unknown and worthy of discovery.

He therefore equipped some small vessels, and commanded that they should pass as far as they could along that coast of Africa which looked upon the great Atlantic ocean, the immensity of which struck the gross and unskilful navigators of these times with terror and amazement. He was not able to communicate his own ardour to his seamen, who proceeded very slowly in the new attempt; each was afraid to venture much farther than he that went before him, and ten years were spent before they had advanced beyond Cape Bajador, so called from its progression into the ocean, and the circuit by which it must be doubled. The opposition of this promontory to the course of the sea, produced a violent current and high waves, into which they durst not venture, and which they had not yet knowledge enough to avoid by standing off from the land into the open sea.

The prince was desirous to know something of the countries that lay beyond this formidable cape, and sent two commanders, named John Gonzales Zarco, and Tristan Vaz, in 1418, to pass beyond Bajador, and survey the coast behind it. They were caught by a tempest, which drove them out

into the unknown ocean, where they expected to perish by the violence of the wind, or perhaps to wander for ever in the boundless deep. At last, in the midst of their despair, they found a small island, where they sheltered themselves, and which the sense of their deliverance disposed them to call Puerto Santo, or the Holy Haven.

When they returned with an account of this new island, Henry performed a public act of thanksgiving, and sent them again with seeds and cattle; and we are told by the Spanish historian, that they set two rabbits on shore, which increased so much in a few years; that they drove away the inhabitants, by destroying their corn and plants, and were suffered to enjoy the island without opposition.

In the second or third voyage to Puerto Santo (for authors do not agree which), a third captain called Perello, was joined to the two former. As they looked round the island upon the ocean, they saw at a distance something which they took for a cloud, till they perceived that it did not change its place. They directed their course towards it, and, in 1419, discovered another island covered with trees, which they therefore called Madera, or the Isle of Wood.

Madera was given to Vaz or Zarco, who set fire to the woods, which are reported by Souza to have burnt for seven years together, and to have been wasted, till want of wood was the greatest inconvenience of the place. But green wood is not very apt to burn, and the heavy rains which fall in these countries must surely have extinguished the conflagration, were it ever so violent.

There was yet little progress made upon the southern coast, and Henry's project was treated as chimerical by many of his countrymen. At last Gilianes, in 1433, passed the dreadful cape, to which he gave the name of Bajador, and came back to the wonder of the nation.

In two voyages more, made in the two following years, they passed forty-two leagues farther, and in the latter, two men with horses being set on shore, wandered over the country, and found nineteen men, whom, according to the savage manners of that age, they attacked; the natives having javelins, wounded one of the Portuguese, and received some wounds from them. At the mouth of a river they found sea-wolves in great numbers, and brought home many of their skins, which were much esteemed.

Antonio Gonzales, who had been one of the associates of Gilianes, was sent again, in 1440, to bring back a cargo of the skins of sea-wolves. He was followed in another ship by Nunno Tristam. They were now of strength sufficient to venture upon violence, they therefore landed, and without either right or provocation, made all whom they seized their prisoners, and brought them to Portugal, with great commendations both from the prince and the nation.

Henry now began to please himself with the success of his projects, and as one of his purposes was the conversion of infidels, he thought it necessary to impart his undertaking to the pope, and to obtain the sanction of ecclesiastical authority. To this end Fernando Lopez d'Azevedo was dispatched to Rome,

who related to the pope and cardinals the great designs of Henry, and magnified his zeal for the propagation of religion. The pope was pleased with the narrative, and by a formal bull, conferred upon the crown of Portugal all the countries which should be discovered as far as India, together with India itself, and granted several privileges and indulgences to the churches which Henry had built in his new regions, and to the men engaged in the navigation for discovery. By this bull all other princes were forbidden to encroach upon the conquests of the Portuguese, on pain of the censures incurred by the crime of usurpation.

The approbation of the pope, the sight of men whose manners and appearance were so different from those of Europeans, and the hope of gain from golden regions, which has been always the great incentive to hazard and discovery, now began to operate with full force. The desire of riches and of dominion, which is yet more pleasing to the fancy, filled the courts of the Portuguese prince with innumerable adventurers from very distant parts of Europe. Some wanted to be employed in the search after new countries, and some to be settled in those which had been already found.

Communities now began to be animated by the spirit of enterprise, and many associations were formed for the equipment of ships, and the acquisition of the riches of distant regions, which perhaps were always supposed to be more wealthy, as more remote. These undertakers agreed to pay the prince a fifth part of the profit, sometimes a greater

share, and sent out the armament at their own expence.

The city of Lagos was the first that carried on this design by contribution. The inhabitants fitted out six vessels, under the command of Lucarot, one of the prince's household, and soon after fourteen more were furnished for the same purpose, under the same commander; to those were added many belonging to private men, so that in a short time twenty-six ships put to sea in quest of whatever fortune should present.

The ships of Lagos were soon separated by foul weather, and the rest, taking each its own course, stopped at different parts of the African coast, from Cape Blanco to Cape Verd. Some of them, in 1444, anchored at Gomera, one of the Canaries, where they were kindly treated by the inhabitants, who took them into their service against the people of the isle of Palma, with whom they were at war; but the Portuguese, at their return to Gomera, not being made so rich as they expected, fell upon their friends, in contempt of [all the laws of hospitality and stipulations of alliance, and, making several of them prisoners and slaves, set sail for Lisbon.

The Canaries are supposed to have been known, however imperfectly, to the ancients; but in the confusion of the subsequent ages they were lost and forgotten, till about the year 1340, the Biscayners found Lucarot, and invading it (for to find a new country and invade it has always been the same), brought away seventy captives, and some commodities of the place. Louis de la Cerda, count of

Clermont, of the blood royal both of France and Spain, nephew of John de la Cerda, who called himself the Prince of Fortune, had once a mind to settle in those islands, and applying himself first to the king of Arragon, and then to Clement VI. was by the pope crowned at Avignon, king of the Canaries, on condition that he should reduce them to the true religion; but the prince altered his mind, and went into France to serve against the English. The kings both of Castile and Portugal, though they did not oppose the papal grant, yet complained of it, as made without their knowledge, and in contravention of their rights.

The first settlement in the Canaries was made by John de Betancour, a French gentleman, for whom his kinsman Robin de Braquement, admiral of France, begged them, with the title of King, from Henry the magnificent of Castile, to whom he had done eminent services. John made himself master of some of the isles, but could never conquer the grand Canary; and having spent all that he had, went back to Europe, leaving his nephew, Massiot de Betancour, to take care of his new dominion. Massiot had a quarrel with the vicar-general, and was likewise disgusted by the long absence of his uncle, whom the French king detained in his service, and being able to keep his ground no longer, he transferred his rights to Don Henry, in exchange for some districts in the Madera, where he settled his family.

Don Henry, when he had purchased those islands, sent thither in 1424 two thousand five hundred foot, and an hundred and twenty horse; but the army

was too numerous to be maintained by the country. The king of Castile afterwards claimed them, as conquered by his subjects under Betancour, and held under the crown of Castile by fealty and homage; his claim was allowed, and the Canaries were resigned.

It was the constant practice of Henry's navigators, when they stopped at a desert island, to land cattle upon it, and leave them to breed, where, neither wanting room nor food, they multiplied very fast, and furnished a very commodious supply to those who came afterwards to the same place. This was imitated in some degree by Anson, at the isle of Juan Fernandez.

The islands of Madera, he not only filled with inhabitants, assisted by artificers of every kind, but procured such plants as seemed likely to flourish in that climate, and introduced sugar canes and vines, which afterwards produced a very large revenue.

The trade of Africa now began to be profitable, but a great part of the gain arose from the sale of slaves, who were annually brought into Portugal, by hundreds, as Lafitau relates, and without any appearance of indignation or compassion; they likewise imported gold dust in such quantities, that Alphonsus V. coined it into a new species of money called Crusades, which is still continued in Portugal.

In time they made their way along the south coast of Africa, eastward to the country of the negros, whom they found living in tents, without any political institution, supporting life with very little labour by the milk of their kine and millet, to

which those who inhabited the coast added fish dried in the sun. Having never seen the natives or heard of the arts of Europe, they gazed with astonishment on the ships when they approached their coasts, sometimes thinking them birds, and sometimes fishes, according as their sails were spread or lowered; and sometimes conceiving them to be only phantoms, which played to and fro in the ocean. Such is the account given by the historian, perhaps with too much prejudice against a negro's understanding; who, though he might well wonder at the bulk and swiftness of the first ship, would scarcely conceive it to be either a bird or a fish; but having seen many bodies floating in the water, would think it what it really is, a large boat; and if he had no knowledge of any means by which separate pieces of timber may be joined together, would form very wild notions concerning its construction, or perhaps suppose it to be a hollow trunk of a tree, from some country where trees grow to a much greater height and thickness than in his own.

When the Portuguese came to land, they increased the astonishment of the poor inhabitants, who saw men clad in iron, with thunder and lightning in their hands. They did not understand each other, and signs are a very imperfect mode of communication even to men of more knowledge than the negros, so that they could not easily negotiate or traffic: at last the Portuguese laid hands on some of them to carry them home for a sample; and their dread and amazement was raised, says Lafitau, to the highest pitch, when the Europeans fired their cannons and muskets among them,

and they saw their companions fall dead at their feet, without any enemy at hand, or any visible cause of their destruction.

On what occasion, or for what purpose, cannons and muskets were discharged among a people harmless and secure, by strangers who, without any right, visited their coast; it is not thought necessary to inform us. The Portuguese could fear nothing from them, and had therefore no adequate provocation; nor is there any reason to believe but that they murdered the negros in wanton merriment, perhaps only to try how many a volley would destroy, or what would be the consternation of those that should escape. We are openly told, that they had the less scruple concerning their treatment of the savage people, because they scarcely considered them as distinct from beasts; and indeed the practice of all the European nations, and among others of the English barbarians that cultivate the southern islands of America, proves, that this opinion, however absurd and foolish, however wicked and injurious, still continues to prevail. Interest and pride harden the heart, and it is in vain to dispute against avarice and power.

By these practices the first discoverers alienated the natives from them; and whenever a ship appeared, every one that could fly betook himself to the mountains and the woods, so that nothing was to be got more than they could steal: they sometimes surprised a few fishers, and made them slaves, and did what they could to offend the negros, and enrich themselves. This practice of robbery continued till some of the negros, who had been enslaved, learned the

language of Portugal, so as to be able to interpret for their countrymen, and one John Fernandez applied himself to the negro tongue.

From this time began something like a regular traffic, such as can subsist between nations where all the power is on one side; and a factory was settled in the isle of Arguin, under the protection of a fort. The profit of this new trade was assigned for a certain term to Ferdinando Gomez; which seems to be the common method of establishing a trade that is yet too small to engage the care of a nation, and can only be enlarged by that attention which is bestowed by private men upon private advantage. Gomez continued the discoveries to Cape Catherine, two degrees and a half beyond the line.

In the latter part of the reign of Alphonso V. the ardour of discovery was somewhat intermitted, and all commercial enterprizes were interrupted by the wars in which he was engaged with various success. But John II. who succeeded, being fully convinced both of the honour and advantage of extending his dominions in countries hitherto unknown, prosecuted the designs of prince Henry with the utmost vigour, and in a short time added to his other titles, that of king of Guinea and of the coast of Africa.

In 1463, in the third year of the reign of John II. died prince Henry, the first encourager of remote navigation, by whose incitement, patronage and example, distant nations have been made acquainted with each other, unknown countries have been brought into general view, and the power of Europe has been extended to the remotest parts of the world. What

mankind has lost and gained by the genius and designs of this prince, it would be long to compare, and very difficult to estimate. Much knowledge has been acquired, and much cruelty been committed; the belief of religion has been very little propagated, and its laws have been outrageously and enormously violated. The Europeans have scarcely visited any coast, but to gratify avarice, and extend corruption; to arrogate dominion without right, and practise cruelty without incentive. Happy had it then been for the oppressed, if the designs of Henry had slept in his bosom, and surely more happy for the oppressors. But there is reason to hope that out of so much evil good may sometimes be produced; and that the light of the gospel will at last illuminate the sands of Africa, and the deserts of America, though its progress cannot but be slow, when it is so much obstructed by the lives of christians.

The death of Henry did not interrupt the progress of king John, who was very strict in his injunctions, not only to make discoveries, but to secure possession of the countries that were found. The practice of the first navigators was only to raise a cross upon the coast, and to carve upon trees the device of Don Henry, the name which they thought it proper to give to the new coast, and any other information, for those that might happen to follow them; but now they began to erect piles of stone with a cross on the top, and engraved on the stone the arms of Portugal, the name of the king, and of the commander of the ship, with the day and year of the discovery. This was accounted sufficient to prove their claim to the

new lands ; which might be pleaded with justice enough against any other Europeans, and the rights of the original inhabitants were never taken into notice. Of these stone records, nine more were erected in the reign of king John, along the coast of Africa, as far as the Cape of Good Hope.

The fortress in the isle of Arguin was finished, and it was found necessary to build another at S. Georgio de la Mina, a few degrees north of the line, to secure the trade of gold dust, which was chiefly carried on at that place. For this purpose a fleet was fitted out of ten large, and three smaller vessels, freighted with materials for building the fort, and with provisions and ammunition for six hundred men, of whom one hundred were workmen and labourers. Father Lafitau relates, in very particular terms, that these ships carried hewn stones, bricks, and timber, for the fort, so that nothing remained but barely to erect it. He does not seem to consider how small a fort could be made out of the lading of ten ships.

The command of this fleet was given to Don Diego d'Azambue, who set sail December 11, 1481, and reaching La Mina, January 19, 1482, gave immediate notice of his arrival to Caramansa, a petty prince of that part of the country, whom he very earnestly invited to an immediate conference.

Having received a message of civility from the negro chief, he landed, and chose a rising ground, proper for his intended fortress, on which he planted a banner with the arms of Portugal, and took possession in the name of his master. He then raised

an altar at the foot of a great tree, on which mass was celebrated, the whole assembly, says Lafitau, breaking out into tears of devotion, at the prospect of inviting these barbarous nations to the profession of the true faith. Being secure of the goodness of the end, they had no scruple about the means, nor ever considered how differently from the primitive martyrs and apostles they were attempting to make proselytes. The first propagators of christianity recommended their doctrines by their sufferings and virtues; they entered no defenceless territories with swords in their hands; they built no forts upon ground to which they had no right, nor polluted the purity of religion with the avarice of trade, or insolence of power.

What may still raise higher the indignation of a christian mind, this purpose of propagating truth appears never to have been seriously pursued by any European nation; no means, whether lawful or unlawful, have been practised with diligence and perseverance for the conversion of savages. When a fort is built, and a factory established, there remains no other care than to grow rich. It is soon found that ignorance is most easily kept in subjection, and that by enlightening the mind with truth, fraud and usurpation would be made less practicable and less secure.

In a few days an interview was appointed between Caramansa and Azambue. The Portuguese uttered by his interpreter a pompous speech, in which he made the negro prince large offers of his master's friendship, exhorting him to embrace the religion of his new ally; and told him, that as they came to form

a league of friendship with him, it was necessary that they should build a fort, which might serve as a retreat from their common enemies, and in which the Portuguese might be always at hand to lend him assistance.

The negro, who seemed very well to understand what the admiral intended, after a short pause, returned an answer full of respect to the king of Portugal, but appeared a little doubtful what to determine with relation to the fort. The commander saw his diffidence, and used all his art of persuasion to overcome it. Caramansa, either induced by hope, or constrained by fear, either desirous to make them friends, or not daring to make them enemies, consented, with a shew of joy, to that which it was not in his power to refuse; and the new comers began the next day to break the ground for a foundation of a fort.

Within the limit of their intended fortification were some spots appropriated to superstitious practices; which the negroes no sooner perceived in danger of violation by the spade and pick-ax, than they ran to arms, and began to interrupt the work. The Portuguese persisted in their purpose, and there had soon been tumult and bloodshed, had not the admiral, who was at a distance to superintend the unlading the materials for the edifice, been informed of the danger. He was told at the same time, that the support of their superstition was only a pretence, and that all their rage might be appeased by the presents which the prince expected, the delay of which had greatly offended him.

The Portuguese admiral immediately ran to his men, prohibited all violence, and stopped the commotion; he then brought out the presents, and spread them with great pomp before the prince; if they were of no great value they were rare, for the negroes had never seen such wonders before; they were therefore received with ecstasy, and perhaps the Portuguese derided them for their fondness of trifles, without considering how many things derive their value only from their scarcity; and that gold and rubies would be trifles, if nature had scattered them with less frugality.

The work was now peaceably continued, and such was the diligence with which the strangers hastened to secure the possession of the country, that in twenty days they had sufficiently fortified themselves against the hostility of the negroes. They then proceeded to complete their design. A church was built in the place where the first altar had been raised, on which a mass was established to be celebrated for ever, once a day, for the repose of the soul of Henry, the first mover of these discoveries.

In this fort the admiral remained with sixty soldiers, and sent back the rest in the ships, with gold, slaves, and other commodities. It may be observed that slaves were never forgotten, and that wherever they went, they gratified their pride, if not their avarice, and brought some of the natives, when it happened that they brought nothing else.

The Portuguese endeavoured to extend their dominions still farther. They had gained some knowledge of the Jaloffs, a nation inhabiting the coast of Guinea, between the Gambia and Senegal. The

king of the Jaloffs being vicious and luxurious, committed the care of the government to Bemoin, his brother by the mother's side, in preference to two other brothers by his father. Bemoin, who wanted neither bravery nor prudence, knew that his station was invidious and dangerous, and therefore made an alliance with the Portuguese, and retained them in his defence by liberality and kindness. At last the king was killed by the contrivance of his brothers, and Bemoin was to lose his power, or maintain it by war.

He had recourse in this exigence to his great ally the king of Portugal, who promised to support him, on condition that he should become a christian, and sent an ambassador, accompanied with missionaries. Bemoin promised all that was required, objecting only that the time of a civil war was not a proper season for a change of religion, which would alienate his adherents; but said, that when he was once peaceably established, he would not only embrace the true religion himself, but would endeavour the conversion of the kingdom.

This excuse was admitted, and Bemoin delayed his conversion for a year, renewing his promise from time to time. But the war was unsuccessful, trade was at a stand, and Bemoin was not able to pay the money which he had borrowed of the Portuguese merchants, who sent intelligence to Lisbon of his delays, and received an order from the king, commanding them, under severe penalties, to return home.

Bemoin here saw his ruin approaching, and hoping that money would pacify all resentment, borrowed

of his friends a sum sufficient to discharge his debts ; and finding that even this enticement would not delay the departure of the Portuguese, he embarked his nephew in their ships, with an hundred slaves, whom he presented to the king of Portugal, to solicit his assistance. The effect of this embassy he could not stay to know ; for being soon after deposed, he sought shelter in the fortress of Arguin, whence he took shipping for Portugal, with twenty-five of his principal followers.

The king of Portugal pleased his own vanity and that of his subjects, by receiving him with great state and magnificence, as a mighty monarch who had fled to an ally for succour in misfortune. All the lords and ladies of the court were assembled, and Bemoin was conducted with a splendid attendance into the hall of audience, where the king rose from his throne to welcome him. Bemoin then made a speech with great ease and dignity, representing his unhappy state, and imploring the favour of his powerful ally. The king was touched with his affliction, and struck by his wisdom.

The conversion of Bemoin was much desired by the king ; and it was therefore immediately proposed to him that he should become a christian. Ecclesiastics were sent to instruct him ; and having now no more obstacles from interest, he was easily persuaded to declare himself whatever would please those on whom he now depended. He was baptized on the third day of December, 1489, in the palace of the queen, with great magnificence, and named John after the king.

Some time was spent in feasts and sports on this great occasion, and the negroes signalled themselves by many feats of agility, far surpassing the power of Europeans, who having more helps of art, are less diligent to cultivate the qualities of nature. In the mean time twenty large ships were fitted out, well manned, stored with ammunition, and laden with materials necessary for the erection of a fort. With this powerful armament were sent a great number of missionaries under the direction of Alvarez the king's confessor. The command of this force, which filled the coast of Africa with terror, was given to Pedro Vaz d'Acugna, surnamed Bisagu; who soon after they had landed, not being well pleased with his expedition, put an end to its inconveniencies by stabbing Bemoin suddenly to the heart. The king heard of this outrage with great sorrow, but did not attempt to punish the murderer.

The king's concern for the restoration of Bemoin was not the mere effect of kindness, he hoped by his help to facilitate greater designs. He now began to form hopes of finding a way to the East Indies, and of enriching his country by that gainful commerce: this he was encouraged to believe practicable by a map which the Moors had given to prince Henry, and which subsequent discoveries have shewn to be sufficiently near to exactness, where a passage round the south-east part of Africa was evidently described.

The king had another scheme yet more likely to engage curiosity, and not irreconcilable with his interest. The world had for some time been filled with the report of a powerful christian prince called

Prester John, whose country was unknown, and whom some, after Paulus Venetus, supposed to reign in the midst of Asia, and others in the depth of Ethiopia, between the ocean and Red-sea. The account of the African christians was confirmed by some Abyssinians who had travelled into Spain, and by some friars that had visited the holy land; and the king was extremely desirous of their correspondence and alliance.

Some obscure intelligence had been obtained, which made it seem probable that a way might be found from the countries lately discovered, to those of this far-famed monarch. In 1486, an ambassador came from the king of Bemin, to desire that preachers might be sent to instruct him and his subjects in the true religion. He related that in the inland country, three hundred and fifty leagues eastward from Bemin, was a mighty monarch called Ogane, who had jurisdiction both spiritual and temporal over other kings; that the king of Bemin and his neighbours, at their accession, sent ambassadors to him with rich presents, and received from him the investiture of their dominions, and the marks of sovereignty, which were a kind of sceptre, a helmet, and a latten cross, without which they could not be considered as lawful kings; that this great prince was never seen but on the day of audience, and then held out one of his feet to the ambassador, who kissed it with great reverence, and who at his departure had a cross of latten hung on his neck, which ennobled him thenceforward, and exempted him from all servile offices.

Bemoin had likewise told the king, that to the east of the kingdom of Tombut, there was among other princes, one that was neither Mahometan nor idolater, but who seemed to profess a religion nearly resembling the christian. These informations compared with each other, and with the current accounts of Prester John, induced the king to an opinion, which, though formed somewhat at hazard, is still believed to be right, that by passing up the river Senegal his dominions would be found. It was therefore ordered that when the fortress was finished, an attempt should be made to pass upward to the source of the river. The design failed then, and has never yet succeeded.

Other ways likewise were tried of penetrating to the kingdom of Prester John, for the king resolved to leave neither sea nor land unsearched till he should be found. The two messengers who were sent first on this design, went to Jerusalem, and then returned, being persuaded that, for want of understanding the language of the country, it would be vain or impossible to travel farther. Two more were then dispatched, one of whom was Pedro de Covillan, the other Alphonso de Pavia; they passed from Naples to Alexandria, and then travelled to Cairo, from whence they went to Aden, a town of Arabia on the Red-sea, near its mouth. From Aden, Pavia set sail for Ethiopia, and Covillan for the Indies. Covillan visited Canavar, Calicut, and Goa in the Indies, and Sosula in the eastern Africa, thence he returned to Aden, and then to Cairo, where he had agreed to meet Pavia. At Cairo he was informed that Pavia was dead, but he met with two Portuguese Jews, one of whom had

given the king an account of the situation and trade of Ormus: they brought orders to Covillan, that he should send one of them home with the journal of his travels, and go to Ormus with the other.

Covillan obeyed the orders, sending an exact account of his adventures to Lisbon, and proceeding with the other messenger to Ormus; where having made sufficient inquiry, he sent his companion homewards with the caravans that were going to Aleppo, and embarking once more on the Red-sea, arrived in time at Abyssinia, and found the prince whom he had sought so long, and with such danger.

Two ships were sent out upon the same search, of which Bartholomew Diaz had the chief command; they were attended by a smaller vessel laden with provisions, that they might not return upon pretence of want either felt or feared.

Navigation was now brought nearer to perfection. The Portuguese claim the honour of many inventions by which the sailor is assisted, and which enable him to leave sight of land, and commit himself to the boundless ocean. Diaz had orders to proceed beyond the river Zaire, where Diego Can had stopped, to build monuments of his discoveries, and to leave upon the coasts negro men and women well instructed, who might inquire after Prester John, and fill the natives with reverence for the Portuguese.

Diaz, with much opposition from his crew, whose mutinies he repressed, partly by softness and partly by steadiness, sailed on till he reached the utmost point of Africa, which from the bad weather that he met there, he called Caba Tormentoso, or the Cape of

Storms. He would have gone forward, but his crew forced him to return. In his way back he met the Victualler, from which he had been parted nine months before; of the nine men which were in it at the separation, six had been killed by the negros, and of the three remaining, one died for joy at the sight of his friends. Diaz returned to Lisbon in December 1487, and gave an account of his voyage to the king, who ordered the Cape of Storms to be called thenceforward Cabo de Buena Esperanza, or the Cape of Good Hope.

Some time before the expedition of Diaz, the river Zaire and the kingdom of Congo had been discovered by Diego Can, who found a nation of negros who spoke a language which those that were in his ships could not understand. He landed, and the natives, whom he expected to fly like the other inhabitants of the coast, met them with confidence, and treated them with kindness; but Diego finding that they could not understand each other, seized some of their chiefs, and carried them to Portugal, leaving some of his own people in their room to learn the language of Congo.

The negros were soon pacified, and the Portuguese left to their mercy were well treated; and as they by degrees grew able to make themselves understood, recommended themselves, their nation, and their religion. The king of Portugal sent Diego back in a very short time with the negros whom he had forced away; and when they were set safe on shore, the king of Congo conceived so much esteem for Diego, that he sent one of those who had returned back again

in the ship to Lisbon, with two young men dispatched as ambassadors, to desire instructors to be sent for the conversion of his kingdom.

The ambassadors were honourably received, and baptized with great pomp, and a fleet was immediately fitted out for Congo, under the command of Gonsalvo Sorza, who dying in his passage, was succeeded in authority by his nephew Roderigo.

When they came to land, the king's uncle, who commanded the province, immediately requested to be solemnly initiated into the christian religion, which was granted to him and his young son, on Easter day 1491. The father was named Manuel, and the son Antonio. Soon afterwards the king, queen, and eldest prince, received at the font the names of John, Eleanor, and Alphonso; and a war breaking out, the whole army was admitted to the rites of christianity, and then sent against the enemy. They returned victorious, but soon forgot their faith, and formed a conspiracy to restore paganism; a powerful opposition was raised by infidels and apostates, headed by one of the king's younger sons; and the missionaries had been destroyed, had not Alphonso pleaded for them and for christianity.

The enemies of religion now became the enemies of Alphonso, whom they accused to his father of disloyalty. His mother, queen Eleanor, gained time by one artifice after another, till the king was calmed; he then heard the cause again, declared his son innocent, and punished his accusers with death.

The king died soon after, and the throne was disputed by Alphonso, supported by the christians,

and Aquitimo his brother, followed by the infidels. A battle was fought, Aquitimo was taken and put to death, and christianity was for a time established in Congo; but the nation has relapsed into its former follies.

Such was the state of the Portuguese navigation, when, in 1492, Columbus made the daring and prosperous voyage, which gave a new world to European curiosity and European cruelty. He had offered his proposal, and declared his expectations to king John of Portugal, who had slighted him as a fanciful and rash projector, that promised what he had not reasonable hopes to perform. Columbus had solicited other princes, and had been repulsed with the same indignity; at last Isabella of Arragon furnished him with ships, and having found America, he entered the mouth of the Tagus in his return, and shewed the natives of the new country. When he was admitted to the king's presence, he acted and talked with so much haughtiness, and reflected on the neglect which he had undergone with so much acrimony, that the courtiers who saw their prince insulted, offered to destroy him; but the king, who knew that he deserved the reproaches that had been used, and who now sincerely regretted his incredulity, would suffer no violence to be offered him, but dismissed him with presents and with honours.

The Portuguese and Spaniards became now jealous of each other's claim to countries which neither had yet seen; and the pope, to whom they appealed, divided the new world between them, by a line drawn from north to south, a hundred leagues westward from Cape Verd and the Azores, giving all that lies

west from that line to the Spaniards, and all that lies east to the Portuguese. This was no satisfactory division, for the east and west must meet at last, but that time was then at a great distance.

According to this grant, the Portuguese continued their discoveries eastward, and became masters of much of the coast both of Africa and the Indies; but they seized much more than they could occupy, and while they were under the dominion of Spain, lost the greater part of their Indian territories.

THE
PREFACE
TO THE
PRECEPTOR :

CONTAINING
A GENERAL PLAN OF EDUCATION.

THE importance of education is a point so generally understood and confessed, that it would be of little use to attempt any new proof or illustration of its necessity and advantages.

At a time when so many schemes of education have been projected, so many proposals offered to the Public, so many schools opened for general knowledge, and so many lectures in particular sciences attended; at a time when mankind seems intent rather upon familiarising than enlarging the several arts; and every age, sex, and profession, is invited to an acquaintance with those studies, which were formerly supposed accessible only to such as had devoted themselves to literary leisure, and dedicated their powers to philosophical inquiries; it seems rather requisite that an apology should be made for any further attempt to smooth a

path so frequently beaten, or to recommend attainments so ardently pursued, and so officiously directed.

That this general desire may not be frustrated, our schools seem yet to want some book, which may excite curiosity by its variety, encourage diligence by its facility, and reward application by its usefulness. In examining the treatises hitherto offered to the youth of this nation, there appeared none that did not fail in one or other of these essential qualities; none that were not either unpleasing, or abstruse, or crowded with learning, very rarely applicable to the purposes of common life.

Every man, who has been engaged in teaching, knows with how much difficulty youthful minds are confined to close application, and how readily they deviate to any thing, rather than attend to that which is imposed as a task. That this disposition, when it becomes inconsistent with the forms of education, is to be checked, will be readily granted; but since, though it may be in some degree obviated, it cannot wholly be suppressed, it is surely rational to turn it to advantage, by taking care that the mind shall never want objects on which its faculties may be usefully employed. It is not impossible, that this restless desire of novelty, which gives so much trouble to the teacher, may be often the struggle of the understanding starting from that to which it is not by nature adapted, and travelling in search of something on which it may fix with greater satisfaction. For without supposing each man particularly marked out by his genius for particular performances, it may be easily conceived, that when a numerous class of boys is con-

fin'd indiscriminately to the same forms of composition, the repetition of the same words, or the explanation of the same sentiments, the employment must, either by nature or accident, be less suitable to some than others; that the ideas to be contemplated may be too difficult for the apprehension of one, and too obvious for that of another: they may be such as some understandings cannot reach, though others look down upon them as below their regard. Every mind in its progress through the different stages of scholastic learning, must be often in one of these conditions, must either flag with the labour, or grow wanton with the facility of the work assigned; and in either state it naturally turns aside from the track before it. Weariness looks out for relief, and leisure for employment, and surely it is rational to indulge the wanderings of both. For the faculties which are too lightly burdened with the business of the day, may with great propriety add to it some other inquiry; and he that finds himself over-wearied by a task, which perhaps, with all his efforts, he is not able to perform, is undoubtedly to be justified in addicting himself rather to easier studies, and endeavouring to quit that which is above his attainment, for that which nature has not made him incapable of pursuing with advantage.

That therefore this roving curiosity may not be unsatisfied, it seems necessary to scatter in its way such allurements as may withhold it from an useless and unbounded dissipation; such as may regulate it without violence, and direct it without restraint; such as may suit every inclination, and fit every capacity; may em-

ploy the stronger genius, by operations of reason, and engage the less active or forcible mind, by supplying it with easy knowledge, and obviating that despondence, which quickly prevails, when nothing appears but a succession of difficulties, and one labour only ceases that another may be imposed.

A book intended thus to correspond with all dispositions, and afford entertainment for minds of different powers, is necessarily to contain treatises on different subjects. As it is designed for schools, though for the higher classes, it is confined wholly to such parts of knowledge as young minds may comprehend ; and as it is drawn up for Readers yet unexperienced in life, and unable to distinguish the useful from the ostentatious or unnecessary parts of science, it is requisite that a very nice distinction should be made, that nothing unprofitable should be admitted for the sake of pleasure, nor any arts of attraction neglected, that might fix the attention upon more important studies.

These considerations produced the book which is here offered to the Public, as better adapted to the great design of pleasing by instruction, than any which has hitherto been admitted into our seminaries of literature. There are not indeed wanting in the world compendiums of science, but many were written at a time when philosophy was imperfect, as that of G. Valla ; many contain only naked schemes, or synoptical tables, as that of Stierius ; and others are too large and voluminous, as that of Alstedius ; and, what is not to be considered as the least objection, they are generally in a language, which, to boys, is more dif-

ficult than the subject ; and it is too hard a task to be condemned to learn a new science in an unknown tongue. As in life, so in study, it is dangerous to do more things than one at a time ; and the mind is not to be harassed with unnecessary obstructions, in a way, of which the natural and unavoidable asperity is such as too frequently produces despair.

If the language however had been the only objection to any of the volumes already extant, the schools might have been supplied at a small expence by a translation ; but none could be found that was not so defective, redundant, or erroneous, as to be of more danger than use. It was necessary then to examine, whether upon every single science there was not some treatise written for the use of scholars, which might be adapted to this design, so that a collection might be made from different authors, without the necessity of writing new systems. This search was not wholly without success ; for two authors were found, whose performances might be admitted with little alteration. But so widely does this plan differ from all others, so much has the state of many kinds of learning been changed, or so unfortunately have they hitherto been cultivated, that none of the other subjects were explained in such a manner as was now required ; and therefore neither care nor expence has been spared to obtain new lights, and procure to this book the merit of an original.

With what judgment the design has been formed, and with what skill it has been executed, the learned world is now to determine. But before sentence shall pass, it is proper to explain more fully what

has been intended, that censure may not be incurred by the omission of that which the original plan did not comprehend; to declare more particularly who they are to whose instructions these treatises pretend, that a charge of arrogance and presumption may be obviated; to lay down the reasons which directed the choice of the several subjects; and to explain more minutely the manner in which each particular part of these volumes is to be used.

The title has already declared, that these volumes are particularly intended for the use of schools, and therefore it has been the care of the authors to explain the several sciences, of which they have treated, in the most familiar manner; for the mind used only to common expressions, and inaccurate ideas, does not suddenly conform itself to scholastic modes of reasoning, or conceive the nice distinctions of a subtile philosophy, and may be properly initiated in speculative studies by an introduction like this, in which the grossness of vulgar conception is avoided, without the observation of metaphysical exactness. It is observed, that in the course of the natural world no change is instantaneous, but all its vicissitudes are gradual and slow; the motions of intellect proceed in the like imperceptible progression, and proper degrees of transition from one study to another are therefore necessary; but let it not be charged upon the writers of this book, that they intended to exhibit more than the dawn of knowledge, or pretended to raise in the mind any nobler product than the blossoms of science, which more powerful institutions may ripen into fruit.

For this reason it must not be expected, that in the following pages should be found a complete circle of the sciences; or that any authors, now deservedly esteemed, should be rejected to make way for what is here offered. It was intended by the means of these precepts, not to deck the mind with ornaments, but to protect it from nakedness; not to enrich it with affluence, but to supply it with necessaries. The *inquiry* therefore was not what degrees of knowledge are desirable, but what are in most stations of life indispensably required; and the *choice* was determined not by the splendor of any part of literature, but by the extent of its use, and the inconvenience which its neglect was likely to produce.

I. The prevalence of this consideration appears in the first part, which is appropriated to the humble purposes of teaching to *read*, and *speak*, and *write letters*; an attempt of little magnificence, but in which no man needs to blush for having employed his time, if honour be estimated by use. For precepts of this kind, however neglected, extend their importance as far as men are found who communicate their thoughts one to another; they are equally useful to the highest and the lowest; they may often contribute to make ignorance less inelegant; and may it not be observed, that they are frequently wanted for the embellishment even of learning?

In order to shew the proper use of this part, which consists of various exemplifications of such differences of style as require correspondent diversities of pronunciation, it will be proper to inform the scholar, that there are in general three forms of style, each of

which demands its particular mode of elocution: the *familiar*, the *solemn*, and the *pathetic*. That in the *familiar*, he that reads is only to talk with a paper in his hand, and to indulge himself in all the lighter liberties of voice, as when he reads the common articles of a newspaper, or a cursory letter of intelligence or business. That the *solemn* style, such as that of a serious narrative, exacts an uniform steadiness of speech, equal, clear, and calm. That for the *pathetic*, such as an animated oration, it is necessary the voice be regulated by the sense, varying and rising with the passions. These rules, which are the most general, admit a great number of subordinate observations, which must be particularly adapted to every scholar; for it is observable, that though very few read well, yet every man errs in a different way. But let one remark never be omitted: inculcate strongly to every scholar the danger of copying the voice of another; an attempt which, though it has been often repeated, is always unsuccessful.

The importance of writing letters with propriety justly claims to be considered with care, since, next to the power of pleasing with his presence, every man would wish to be able to give delight at a distance. This great art should be diligently taught, the rather, because of those letters which are most useful, and by which the general business of life is transacted, there are no *examples* easily to be found. It seems the general fault of those who undertake this part of education, that they propose for the exercise of their scholars, occasions which rarely hap-

pen; such as congratulations and condolences, and neglect those without which life cannot proceed. It is possible to pass many years without the necessity of writing panegyrics or epithalamiums; but every man has frequent occasion to state a contract, or demand a debt, or make a narrative of some minute incidents of common life. On these subjects, therefore, young persons should be taught to think justly and write clearly, neatly and succinctly, lest they come from school into the world without any acquaintance with common affairs, and stand idle spectators of mankind, in expectation that some great event will give them an opportunity to exert their rhetoric.

II. The second place is assigned to *geometry*; on the usefulness of which it is unnecessary to expatiate in an age when mathematical studies have so much engaged the attention of all classes of men. This treatise is one of those which have been borrowed, being a translation from the work of Mr. Le Clerc; and is not intended as more than the first initiation. In delivering the fundamental principles of *geometry*, it is necessary to proceed by slow steps, that each proposition may be fully understood before another is attempted. For which purpose it is not sufficient, that when a question is asked in the words of the book, the scholar likewise can in the words of the book return the proper answer; for this may be only an act of memory, not of understanding: it is always proper to vary the words of the question, to place the proposition in different points of view, and to require of the learner an explanation in his own terms, in-

forming him however when they are improper. By this method the scholar will become cautious and attentive, and the master will know with certainty the degree of his proficiency. Yet, though this rule is generally right, I cannot but recommend a precept of Pardie's, that when the student cannot be made to comprehend some particular part, it should be, for that time, laid aside, till new light shall arise from subsequent observation.

When this compendium is completely understood, the scholar may proceed to the perusal of Tacquet, afterwards of Euclid himself, and then of the modern improvers of *geometry*, such as Barrow, Keil, and Sir Isaac Newton.

III. The necessity of some acquaintance with *geography* and *astronomy* will not be disputed. If the pupil is born to the ease of a large fortune, no part of learning is more necessary to him than the knowledge of the situation of nations, on which their interests generally depend; if he is dedicated to any of the learned professions, it is scarcely possible that he will not be obliged to apply himself in some part of his life to these studies, as no other branch of literature can be fully comprehended without them; if he is designed for the arts of commerce or agriculture, some general acquaintance with these sciences will be found extremely useful to him; in a word, no studies afford more extensive, more wonderful, or more pleasing scenes; and therefore there can be no ideas impressed upon the soul, which can more conduce to its future entertainment.

In the pursuit of these sciences, it will be proper to proceed with the same gradation and caution as in *geometry*. And it is always of use to decorate the nakedness of science, by interspersing such observations and narratives as may amuse the mind, and excite curiosity. Thus, in explaining the state of the polar regions, it might be fit to read the narrative of the Englishmen that wintered in Greenland, which will make young minds sufficiently curious after the cause of such a length of night, and intenseness of cold; and many stratagems of the same kind might be practised to interest them in all parts of their studies, and call in their passions to animate their inquiries. When they have read this treatise, it will be proper to recommend to them Varenius's *Geography*, and Gregory's *Astronomy*.

IV. The study of *chronology* and *history* seems to be one of the most natural delights of the human mind. It is not easy to live without inquiring by what means every thing was brought into the state in which we now behold it, or without finding in the mind some desire of being informed concerning the generations of mankind that have been in possession of the world before us, whether they were better or worse than ourselves; or what good or evil has been derived to us from their schemes, practices, and institutions. These are inquiries which *history* alone can satisfy; and *history* can only be made intelligible by some knowledge of *chronology*, the science by which events are ranged in their order, and the periods of computation are settled; and which therefore

assists the memory by method, and enlightens the judgment by shewing the dependence of one transaction on another. Accordingly it should be diligently inculcated to the scholar, that unless he fixes in his mind some idea of the time in which each man of eminence lived, and each action was performed, with some part of the contemporary history of the rest of the world, he will consume his life in useless reading, and darken his mind with a crowd of unconnected events; his memory will be perplexed with distant transactions resembling one another, and his reflections be like a dream in a fever, busy and turbulent, but confused and indistinct.

The technical part of chronology, or the art of computing and adjusting time, as it is very difficult, so it is not of absolute necessity, but should however be taught, so far as it can be learned without the loss of those hours which are required for attainments of nearer concern. The student may join with this treatise Le Clerc's Compendium of History; and afterwards may, for the historical part of chronology, procure Helvicus's and Isaacson's Tables; and, if he is desirous of attaining the technical part, may first peruse Holder's Account of Time, Hearne's Ductor Historicus, Strauchius, the first part of Petavius's Rationarium Temporum; and at length Scaliger de Emendatione Temporum. And for instruction in the method of his historical studies, he may consult Hearne's Ductor Historicus, Wheare's Lectures, Rawlinson's Directions for the Study of History; and for ecclesiastical history, Cave and Dupin, Baronius and Fleury.

V. *Rhetoric* and *poetry* supply life with its highest intellectual pleasures; and in the hands of virtue are of great use for the impression of just sentiments, and recommendation of illustrious examples. In the practice of these great arts, so much more is the effect of nature than the effect of education, that nothing is attempted here but to teach the mind some general heads of observation, to which the beautiful passages of the best writers may commonly be reduced. In the use of this it is not proper that the teacher should confine himself to the examples before him; for by that method he will never enable his pupils to make just application of the rules; but, having inculcated the true meaning of each figure, he should require them to exemplify it by their own observations, pointing to them the poem, or, in longer works, the book or canto in which an example may be found, and leaving them to discover the particular passage by the light of the rules which they have lately learned.

For a farther progress in these studies, they may consult Quintilian and Vossius's *Rhetoric*; the art of poetry will be best learned from *Bossu* and *Bohours* in French, together with *Dryden's* *Essays* and *Prefaces*, the critical *Papers* of *Addison*, *Spence* on *Pope's* *Odyssey*, and *Trapp's* *Prælectiones Poeticæ*; but a more accurate and philosophical account is expected from a commentary upon *Aristotle's* *Art of Poetry*, with which the literature of this nation will be in a short time augmented.

VI. With regard to the practice of *drawing*, it is not necessary to give any directions, the use of

the treatise being only to teach the proper method of imitating the figures which are annexed. It will be proper to incite the scholars to industry, by shewing in other books the use of the art, and informing them how much it assists the apprehension, and relieves the memory; and if they are obliged sometimes to *write* descriptions of engines, utensils or any complex pieces of workmanship, they will more fully apprehend the necessity of an expedient which so happily supplies the defects of language, and enables the eye to conceive what cannot be conveyed to the mind any other way. When they have read this treatise, and practised upon these figures, their theory may be improved by the Jesuit's Perspective, and their manual operations by other figures which may be easily procured.

VII. *Logic*, or the art of arranging and connecting ideas, of forming and examining arguments, is universally allowed to be an attainment in the utmost degree worthy the ambition of that being whose highest honour is to be endued with reason; but it is doubted whether that ambition has yet been gratified, and whether the powers of ratiocination have been much improved by any systems of art, or methodical institutions. The logic which for so many ages kept possession of the schools, has at last been condemned as a mere art of wrangling, of very little use in the pursuit of truth; and later writers have contented themselves with giving an account of the operations of the mind, marking the various stages of her progress, and giving some general rules for the regulation of her conduct. The method of these writers is here followed;

but without a servile adherence to any, and with endeavours to make improvements upon all. This work, however laborious, has yet been fruitless, if there be truth in an observation very frequently made, that logicians out of the school do not reason better than men unassisted by those lights which their science is supposed to bestow. [It is not to be doubted but that logicians may be sometimes overborne by their passions, or blinded by their prejudices; and that a man may reason ill, as he may act ill, not because he does not know what is right, but because he does not regard it; yet it is no more the fault of his art that it does not direct him when his attention is withdrawn from it, than it is the defect of his sight that he misses his way when he shuts his eyes.] Against this cause of error there is no provision to be made, otherwise than by inculcating the value of truth, and the necessity of conquering the passions. But *logic* may likewise fail to produce its effects upon common occasions, for want of being frequently and familiarly applied, till its precepts may direct the mind imperceptibly, as the fingers of a musician are regulated by his knowledge of the tune. This readiness of recollection is only to be procured by frequent impression; and therefore it will be proper, when *logic* has been once learned, the teacher take frequent occasion, in the most easy and familiar conversation, to observe when its rules are preserved, and when they are broken; and that afterwards he read no authors, without exacting of his pupil an account of every remarkable exemplification or breach of the laws of reasoning.

When this system has been digested, if it be thought necessary to proceed farther in the study of method, it will be proper to recommend Crousaz, Watts, Le Clerc, Wolfius, and Locke's Essay on Human Understanding; and if there be imagined any necessity of adding the peripatetic logic, which has been perhaps condemned without a candid trial, it will be convenient to proceed to Sanderson, Wallis, Crackanthorp, and Aristotle.

VIII. To excite a curiosity after the works of God, is the chief design of the small specimen of *natural history* inserted in this collection; which, however, may be sufficient to put the mind in motion, and in some measure to direct its steps; but its effects may easily be improved by a philosophic master, who will every day find a thousand opportunities of turning the attention of his scholars to the contemplation of the objects that surround them, of laying open the wonderful art with which every part of the universe is formed, and the providence which governs the vegetable and animal creation. He may lay before them the Religious Philosopher, Ray, Derham's Physico-Theology, together with the Spectacle de la Nature; and in time recommend to their perusal Rondoletius and Aldrovandus.

IX. But how much soever the reason may be strengthened by *logic*, or the conceptions of the mind enlarged by the study of nature, it is necessary the man be not suffered to dwell upon them so long as to neglect the study of himself, the knowledge of his own station in the ranks of being, and his various relations to the innumerable multitudes which surround

him, and with which his Maker has ordained him to be united for the reception and communication of happiness. To consider these aright is of the greatest importance, since from these arise duties which he cannot neglect. *Ethics*, or *morality*, therefore, is one of the studies which ought to begin with the first glimpse of reason, and only end with life itself. Other acquisitions are merely temporary benefits, except as they contribute to illustrate the knowledge, and confirm the practice of morality and piety, which extend their influence beyond the grave, and increase our happiness through endless duration.

This great science, therefore, must be inculcated with care and assiduity, such as its importance ought to incite in reasonable minds; and for the prosecution of this design, fit opportunities are always at hand. As the importance of *logic* is to be shewn by detecting false arguments; the excellence of morality is to be displayed by proving the deformity, the reproach, and the misery of all deviations from it. Yet it is to be remembered, that the laws of mere morality are no coercive power; and, however they may by conviction of their fitness please the reasoner in the shade, when the passions stagnate without impulse, and the appetites are secluded from their objects, they will be of little force against the ardour of desire, or the vehemence of rage, amidst the pleasures and tumults of the world. To counteract the power of temptations, hope must be excited by the prospect of rewards, and fear by the expectation of punishment; and virtue may owe her panegyrics to morality, but must derive her authority from religion.

When therefore the obligations of morality are taught, let the sanctions of christianity never be forgotten; by which it will be shewn, that they give strength and lustre to each other; religion will appear to be the voice of reason, and morality the will of God. Under this article must be recommended Tully's Offices, Grotius, Puffendorf, Cumberland's Laws of Nature, and the excellent Mr. Addison's Moral and Religious Essays.

X. Thus far the work is composed for the use of scholars, merely as they are men. But it was thought necessary to introduce something that might be particularly adapted to that country for which it is designed; and therefore a discourse has been added upon *trade and commerce*, of which it becomes every man of this nation to understand at least the general principles, as it is impossible that any should be high or low enough not to be in some degree affected by their declension or prosperity. It is therefore necessary that it should be universally known among us, what changes of property are advantageous, or when the balance of trade is on our side; what are the products or manufactures of other countries; and how far one nation may in any species of traffic obtain or preserve superiority over another. The theory of trade is yet but little understood, and therefore the practice is often without real advantage to the public; but it might be carried on with more general success, if its principles were better considered; and to excite that attention is our chief design. To the perusal of this book may succeed that of Mun upon Foreign Trade, Sir Josiah Child, Locke upon Coin, Davenant's treatises,

the British Merchant, Dictionnaire de Commerce, and, for an abstract or compendium, Gee, and an improvement that may hereafter be made upon his plan.

XI. The principles of *laws* and *government* come next to be considered; by which men are taught to whom obedience is due, for what it is paid, and in what degree it may be justly required. This knowledge, by peculiar necessity, constitutes a part of the education of an Englishman, who professes to obey his prince according to the law, and who is himself a secondary legislator, as he gives his consent, by his representative, to all the laws by which he is bound, and has a right to petition the great council of the nation, whenever he thinks they are deliberating upon an act detrimental to the interest of the community. This is therefore a subject to which the thoughts of a young man ought to be directed; and that he may obtain such knowledge as may qualify him to act and judge as one of a free people, let him be directed to add to this introduction Fortescue's Treatises, N. Bacon's Historical Discourse on the Laws and Government of England, Temple's Introduction, Locke on Government, Zouch's Elementa Juris Civilis, Plato Redivivus, Gurdon's History of Parliaments, and Hooker's Ecclesiastical Polity.

XII. Having thus supplied the young student with knowledge, it remains now that he learns its application; and that thus qualified to act his part, he be at last taught to choose it. For this purpose a section is added upon *human life* and *manners*; in which he is cautioned against the danger of indulging his *passions*, of vitiating his *habits*, and depraving his *sen-*

timents. He is instructed in these points by three fables, two of which were of the highest authority in the ancient Pagan world. But at this he is not to rest; for if he expects to be wise and happy, he must diligently study the SCRIPTURES of GOD.

Such is the book now proposed, as the first initiation into the knowledge of things, which has been thought by many to be too long delayed in the present forms of education. Whether the complaints be not often ill-grounded, may perhaps be disputed; but it is at least reasonable to believe, that greater proficiency might sometimes be made; that real knowledge might be more early communicated; and that children might be allowed, without injury to health, to spend many of those hours upon useful employments, which are generally lost in idleness and play; therefore the public will surely encourage an experiment, by which, if it fails, nobody is hurt; and if it succeeds, all the future ages of the world may find advantage; which may eradicate or prevent vice, by turning to a better use those moments in which it is learned or indulged; and in some sense lengthen life, by teaching posterity to enjoy those years which have hitherto been lost. The success, and even the trial of this experiment, will depend upon those to whom the care of our youth is committed; and a due sense of the importance of their trust will easily prevail upon them to encourage a work which pursues the design of improving education. If any part of the following performance shall upon trial be found capable of amendment; if any thing can be added or altered, so as to render the attainment of knowledge

more easy ; the Editor will be extremely obliged to any gentleman, particularly those who are engaged in the business of teaching, for such hints or observations as may tend towards the improvement, and will spare neither expence nor trouble in making the best use of their information.

PREFACE

TO

ROLT'S DICTIONARY*

NO expectation is more fallacious than that which authors form of the reception which their labours will find among mankind. Scarcely any man publishes a book, whatever it be, without believing that he has caught the moment when the public attention is vacant to his call, and the world is disposed in a particular manner to learn the art which he undertakes to teach.

The writers of this volume are not so far exempt from epidemical prejudices, but that they likewise please themselves with imagining, that they have reserved their labours to a propitious conjuncture, and that this is the proper time for the publication of a Dictionary of Commerce.

The predictions of an author are very far from infallibility; but in justification of some degree of confidence it may be properly observed, that there was never from the earliest ages a time in which trade so much engaged the attention of mankind, or commercial gain was sought with such general emulation. Nations which have hitherto cultivated no art but that of war, nor conceived any means of increasing riches but by plunder, are awakened to

* A new Dictionary of Trade and Commerce, compiled from the Information of the most eminent Merchants, and from the Works of the best Writers on commercial Subjects in all Languages, by Mr. Rolt. Folio, 1757.

more inoffensive industry. Those whom the possession of subterraneous treasures have long disposed to accommodate themselves by foreign industry, are at last convinced that idleness never will be rich. The merchant is now invited to every port, manufactures are established in all cities, and princes who just can view the sea from some single corner of their dominions, are enlarging harbours, erecting mercantile companies, and preparing to traffic in the remotest countries.

Nor is the form of this work less popular than the subject. It has lately been the practice of the learned to range knowledge by the alphabet, and publish dictionaries of every kind of literature. This practice has perhaps been carried too far by the force of fashion. Sciences, in themselves systematical and coherent, are not very properly broken into such fortuitous distributions. A dictionary of arithmetic or geometry can serve only to confound: but commerce, considered in its whole extent, seems to refuse any other method of arrangement, as it comprises innumerable particulars unconnected with each other, among which there is no reason why any should be first or last, better than is furnished by the letters that compose their names.

We cannot indeed boast ourselves the inventors of a scheme so commodious and comprehensive. The French, among innumerable projects for the promotion of traffic, have taken care to supply their merchants with a *Dictionnaire de Commerce*, collected with great industry and exactness, but too large for common use, and adapted to their own trade. This book, as well as others, has been carefully consulted, that

our merchants may not be ignorant of any thing known by their enemies or rivals.

Such indeed is the extent of our undertaking, that it was necessary to solicit every information, to consult the living and the dead. The great qualification of him that attempts a work thus general is diligence of inquiry. No man has opportunity or ability to acquaint himself with all the subjects of a commercial dictionary, so as to describe from his own knowledge, or assert on his own experience. He must therefore often depend upon the veracity of others, as every man depends in common life, and have no other skill to boast than that of selecting judiciously, and arranging properly.

But to him who considers the extent of our subject, limited only by the bounds of nature and of art, the task of selection and method will appear sufficient to overburden industry and distract attention. Many branches of commerce are sub-divided into smaller and smaller parts, till at last they become so minute as not easily to be noted by observation. Many interests are so woven among each other as not to be disentangled without long inquiry; many arts are industriously kept secret, and many practices necessary to be known, are carried on in parts too remote for intelligence.

But the knowledge of trade is of so much importance to a maritime nation, that no labour can be thought great by which information may be obtained; and therefore we hope the reader will not have reason to complain, that, of what he might justly expect to find, any thing is omitted.

To give a detail or analysis of our work is very

difficult; a volume intended to contain whatever is requisite to be known by every trader, necessarily becomes so miscellaneous and unconnected as not to be easily reducible to heads; yet, since we pretend in some measure to treat of traffic as a science, and to make that regular and systematical which has hitherto been to a great degree fortuitous and conjectural, and has often succeeded by chance rather than by conduct, it will be proper to shew that a distribution of parts has been attempted, which, though rude and inadequate, will at least preserve some order, and enable the mind to take a methodical and successive view of this design.

In the dictionary which we here offer to the public, we propose to exhibit the *materials*, the *places*, and the *means* of traffic.

The materials or subjects of traffic are *whatever is bought and sold*, and include therefore every manufacture of art, and almost every production of nature.

In giving an account of the commodities of nature, whether those which are to be used in their original state, as drugs and spices, or those which become useful when they receive a new form from human art, as flax, cotton, and metals, we shall shew the places of their production, the manner in which they grow, the art of cultivating or collecting them, their discriminations and varieties, by which the best sorts are known from the worse, and genuine from fictitious, the arts by which they are counterfeited, the casualties by which they are impaired, and the practices by which the damage is palliated or concealed. We shall likewise shew their virtues and uses, and trace them through all the changes which they undergo.

The history of manufactures is likewise delivered. Of every artificial commodity the manner in which it is made is in some measure described, though it must be remembered, that manual operations are scarce to be conveyed by any words to him that has not seen them. Some general notions may however be afforded; it is easy to comprehend, that plates of iron are formed by the pressure of rollers, and bars by the strokes of a hammer; that a cannon is cast, and that an anvil is forged. But as it is to most traders of more use to know when their goods are well wrought, than by what means, care has been taken to name the places where every manufacture has been carried furthest, and the marks by which its excellency may be ascertained.

By the *places of trade* are understood all ports, cities, or towns, where staples are established, manufactures are wrought, or any commodities are bought and sold advantageously. This part of our work includes an enumeration of almost all the remarkable places in the world, with such an account of their situation, customs, and products, as the merchant would require, who being to begin a new trade in any foreign country, was yet ignorant of the commodities of the place, and the manners of the inhabitants.

But the chief attention of the merchant, and consequently of the author who writes for merchants, ought to be employed upon the *means* of trade, which include all the knowledge and practice necessary to the skilful and successful conduct of commerce.

The first of the means of trade is proper education, which may confer a competent skill in numbers; to be afterwards completed in the counting-house, by ob-

servation of the manner of stating accounts, and regulating books, which is one of the few arts which having been studied in proportion to its importance, is carried as far as use can require. The counting-house of an accomplished merchant is a school of method where the great science may be learned of ranging particulars under generals, of bringing the different parts of a transaction together, and of shewing at one view a long series of dealing and exchange. Let no man venture into large business while he is ignorant of the method of regulating books; never let him imagine that any degree of natural abilities will enable him to supply this deficiency, or preserve multiplicity of affairs from inextricable confusion.

This is the study, without which all other studies will be of little avail; but this alone is not sufficient. It will be necessary to learn many other things, which however may be easily included in the preparatory institutions, such as an exact knowledge of the *weights* and *measures* of different countries, and some skill in geography and navigation, with which this book may perhaps sufficiently supply him.

In navigation, considered as part of the skill of a merchant, is included not so much the art of steering a ship, as the knowledge of the sea-coast, and of the different parts to which his cargoes are sent, the customs to be paid; the passes, permissions, or certificates to be procured; the hazards of every voyage, and the true rate of insurances. To this must be added, an acquaintance with the policies and arts of other nations, as well those to whom the commodities are sold, as of those who carry goods of the same kind

to the same market; and who are therefore to be watched as rivals endeavouring to take advantage of every error, miscarriage, or debate.

The chief of the *means* of trade is *money*, of which our late refinements in traffic have made the knowledge extremely difficult. The merchant must not only inform himself of the various denominations and value of foreign coins, together with their method of counting and reducing; such as the milleries of Portugal, and the livres of France; but he must learn what is of more difficult attainment; the discount of exchanges, the nature of current paper, the principles upon which the several banks of Europe are established, the real value of funds, the true credit of trading companies, with all the sources of profit, and possibilities of loss.

All this he must learn merely as a private dealer, attentive only to his own advantage; but as every man ought to consider himself as part of the community to which he belongs, and while he prosecutes his own interest to promote likewise that of his country, it is necessary for the trader to look abroad upon mankind, and study many questions which are perhaps more properly political than mercantile.

He ought therefore to consider very accurately the balance of trade, or the proportion between things exported and imported; to examine what kinds of commerce are unlawful, either as being expressly prohibited, because detrimental to the manufactures or other interest of his country, as the exportation of silver to the East-Indies, and the introduction of French commodities; or unlawful in itself, as the traffic for ne-

gros. He ought to be able to state with accuracy, the benefits and mischiefs of monopolies, and exclusive companies; to inquire into the arts which have been practised by them to make themselves necessary, or by their opponents to make them odious. He should inform himself what trades are declining, and what are improveable; when the advantage is on our side, and when on that of our rivals.

The state of our *colonies* is always to be diligently surveyed, that no advantage may be lost which they can afford, and that every opportunity may be improved of increasing their wealth and power, or of making them useful to their mother-country.

There is no knowledge of more frequent use than that of duties and impost, whether customs paid at the ports, or excises levied upon the manufacturer. Much of the prosperity of a trading nation depends upon duties properly apportioned; so that what is necessary may continue cheap, and what is of use only to luxury may in some measure atone to the public for the mischief done to individuals. Duties may often be so regulated as to become useful even to those that pay them; and they may be likewise so unequally imposed as to discourage honesty and depress industry, and give temptation to fraud and unlawful practices.

To teach all this is the design of the Commercial Dictionary; which, though immediately and primarily written for the merchants, will be of use to every man of business or curiosity. There is no man who is not in some degree a merchant, who has not something to buy and something to sell, and who does not therefore want such instructions as may teach him the true value of possessions or commodities.

The descriptions of the productions of the earth and water, which this volume will contain, may be equally pleasing and useful to the speculatist with any other natural history; and the accounts of various manufactures will constitute no contemptible body of experimental philosophy. The descriptions of ports and cities may instruct the geographer as well as if they were found in books appropriated only to his own science; and the doctrines of funds, insurances, currency, monopolies, exchanges, and duties, is so necessary to the politician, that without it he can be of no use either in the council or the senate, nor can speak or think justly either on war or trade.

We therefore hope that we shall not repent the labour of compiling this work; nor flatter ourselves unreasonably, in predicting a favourable reception to a book which no condition of life can render useless, which may contribute to the advantage of all that make or receive laws, of all that buy or sell, of all that wish to keep or improve their possessions, of all that desire to be rich, and all that desire to be wise.

PREFACE TO THE TRANSLATION

OF

FATHER LOBO'S VOYAGE

*TO ABYSSINIA**.

THE following relation is so curious and entertaining, and the dissertations that accompany it so judicious and instructive, that the translator is confident his attempt stands in need of no apology, whatever censures may fall on the performance.

The Portuguese traveller, contrary to the general vein of his countrymen, has amused his reader with no romantic absurdities or incredible fictions: whatever he relates, whether true or not, is at least probable; and he who tells nothing exceeding the bounds of probability, has a right to demand that they should believe him who cannot contradict him.

He appears, by his modest and unaffected narration, to have described things as he saw them, to have copied nature from the life, and to have consulted his senses, not his imagination. He meets with no basilisks that destroy with their eyes; his crocodiles devour their prey without tears; and his cataracts fall from the rock without deafening the neighbouring inhabitants.

* For an account of this book, see the Life of Dr. JOHNSON, by the Editor.

The reader will here find no regions cursed with irremediable barrenness, or blest with spontaneous fecundity; no perpetual gloom or unceasing sunshine; nor are the nations here described either devoid of all sense of humanity, or consummate in all private and social virtues: here are no Hottentots without religion, polity, or articulate language; no Chinese perfectly polite, and completely skilled in all sciences: he will discover what will always be discovered by a diligent and impartial inquirer, that wherever human nature is to be found, there is a mixture of vice and virtue, a contest of passion and reason; and that the Creator doth not appear partial in his distributions, but has balanced in most countries their particular inconveniences by particular favours.

In his account of the mission, where his veracity is most to be suspected, he neither exaggerates overmuch the merits of the Jesuits, if we consider the partial regard paid by the Portuguese to their countrymen, by the Jesuits to their society, and by the papists to their church, nor aggravates the vices of the Abyssinians: but if the reader will not be satisfied with a popish account of a popish mission, he may have recourse to the History of the Church of Abyssinia, written by Dr. Geddes, in which he will find the actions and sufferings of the missionaries placed in a different light, though the same in which Mr. Le Grand, with all his zeal for the Roman church, appears to have seen them.

This learned dissertator, however valuable for his industry and erudition, is yet more to be esteemed for having dared so freely, in the midst of France, to declare his disapprobation of the patriarch Oviedo's

sanguinary zeal, who was continually importuning the Portuguese to beat up their drums for missionaries who might preach the gospel with swords in their hands, and propagate by desolation and slaughter the true worship of the God of peace.

It is not easy to forbear reflecting with how little reason these men profess themselves the followers of JESUS, who left this great characteristic to his disciples, that they should be known *by loving one another*, by universal and unbounded charity and benevolence.

Let us suppose an inhabitant of some remote and superior region, yet unskilled in the ways of men, having read and considered the precepts of the gospel, and the example of our Saviour, to come down in search of the *true church*, if he would not inquire after it among the cruel, the insolent, and the oppressive; among those who are continually grasping at dominion over souls as well as bodies; among those who are employed in procuring to themselves impunity for the most enormous villanies, and studying methods of destroying their fellow-creatures, not for their crimes but their errors; if he would not expect to meet benevolence engaged in massacres, or to find mercy in a court of inquisition, he would not look for the *true church* in the church of Rome.

Mr. Le Grand has given in one dissertation an example of great moderation, in deviating from the temper of his religion; but in the others has left proofs, that learning and honesty are often too weak to oppose prejudice. He has made no scruple of preferring the testimony of father Du Bernat to the writ-

ings of all the Portuguese Jesuits, to whom he allows great zeal, but little learning, without giving any other reason than that his favourite was a Frenchman. This is writing only to Frenchmen and to papists: a protestant would be desirous to know, why he must imagine that father Du Bernat had a cooler head or more knowledge, and why one man, whose account is singular, is not more likely to be mistaken than many agreeing in the same account.

If the Portuguese were biassed by any particular views, another bias equally powerful may have deflected the Frenchman from the truth; for they evidently write with contrary designs: the Portuguese, to make their mission seem more necessary, endeavoured to place in the strongest light the differences between the Abyssinian and Roman church; but the great Ludolfus, laying hold on the advantage, reduced these later writers to prove their conformity.

Upon the whole, the controversy seems of no great importance to those who believe the Holy Scriptures sufficient to teach the way of salvation; but, of whatever moment it may be thought, there are no proofs sufficient to decide it.

His discourses on indifferent subjects will divert as well as instruct; and if either in these, or in the relation of father Lobo, any argument shall appear unconvincing, or description obscure, they are defects incident to all mankind, which however are not too rashly to be imputed to the authors, being sometimes perhaps more justly chargeable on the translator.

In this translation (if it may be so called) great liberties have been taken, which, whether justifiable

or not, shall be fairly confessed, and let the judicious part of mankind pardon or condemn them.

In the first part the greatest freedom has been used, in reducing the narration into a narrow compass; so that it is by no means a translation, but an epitome, in which, whether every thing either useful or entertaining be comprised, the compiler is least qualified to determine.

In the account of Abyssinia, and the continuation, the authors have been followed with more exactness; and as few passages appeared, either insignificant or tedious, few have been either shortened or omitted.

The dissertations are the only part in which an exact translation has been attempted; and even in those, abstracts are sometimes given instead of literal quotations, particularly in the first; and sometimes other parts have been contracted.

Several memorials and letters, which are printed at the end of the dissertations to secure the credit of the foregoing narrative, are entirely left out.

It is hoped that after this confession, whoever shall compare this attempt with the original, if he shall find no proofs of fraud or partiality, will candidly overlook any failure of judgment.

AN
ESSAY
ON
EPITAPHS.

THOUGH criticism has been cultivated in every age of learning, by men of great abilities and extensive knowledge, till the rules of writing are become rather burthensome than instructive to the mind; though almost every species of composition has been the subject of particular treatises, and given birth to definitions, distinctions, precepts, and illustrations; yet no critic of note, that has fallen within my observation, has hitherto thought *sepulchral inscriptions* worthy of a minute examination, or pointed out with proper accuracy their beauties and defects.

The reasons of this neglect it is useless to inquire, and perhaps impossible to discover; it might be justly expected that this kind of writing would have been the favourite topic of criticism, and that self-love might have produced some regard for it, in those authors that have crowded libraries with elaborate dissertations upon Homer; since to afford a subject for heroic poems is the privilege of very few, but every man may expect to be recorded in an epitaph, and therefore finds some interest in pro-

viding that his memory may not suffer by an unskilful panegyric.

If our prejudices in favour of antiquity deserve to have any part in the regulation of our studies, EPITAPHS seem intitled to more than common regard, as they are probably of the same age with the art of writing. The most ancient structures in the world, the Pyramids, are supposed to be sepulchral monuments, which either pride or gratitude erected; and the same passions which incited men to such laborious and expensive methods of preserving their own memory, or that of their benefactors, would doubtless incline them not to neglect any easier means by which the same ends might be obtained. Nature and reason have dictated to every nation, that to preserve good actions from oblivion, is both the interest and duty of mankind: and therefore we find no people acquainted with the use of letters, that omitted to grace the tombs of their heroes and wise men with panegyric inscriptions.

To examine, therefore, in what the perfection of EPITAPHS consists, and what rules are to be observed in composing them, will be at least of as much use as other critical inquiries; and for assigning a few hours to such disquisitions, great examples at least, if not strong reasons, may be pleaded.

AN EPITAPH, as the word itself implies, is an *inscription on the tomb*, and in its most extensive import may admit indiscriminately satire or praise. But as malice has seldom produced monuments of defamation, and the tombs hitherto raised have been the work of friendship and benevolence, custom has contracted the original latitude of the *word*, so that

it signifies in the general acceptation an *inscription engraven on a tomb in honour of the person deceased*.

As honours are paid to the dead in order to incite others to the imitation of their excellencies, the principal intention of EPITAPHS is to perpetuate the examples of virtue, that the tomb of a good man may supply the want of his presence, and veneration for his memory produce the same effect as the observation of his life. Those EPITAPHS are, therefore, the most perfect, which set virtue in the strongest light, and are best adapted to exalt the reader's ideas and rouse his emulation.

To this end it is not always necessary to recount the actions of a hero, or enumerate the writings of a philosopher; to imagine such informations necessary, is to detract from their characters, or to suppose their works mortal, or their atchievements in danger of being forgotten. The bare name of such men answers every purpose of a long inscription.

Had only the name of Sir ISAAC NEWTON been subjoined to the design upon his monument, instead of a long detail of his discoveries, which no philosopher can want, and which none but a philosopher can understand, those, by whose direction it was raised, had done more honour both to him and to themselves.

This indeed is a commendation which it requires no genius to bestow, but which can never become vulgar or contemptible, if bestowed with judgment; because no single age produces many men of merit superior to panegyric. None but the first names can stand unassisted against the attacks of time; and if men raised to reputation by accident

or caprice, have nothing but their names engraved on their tombs, there is danger lest in a few years the inscription require an interpreter. Thus have their expectations been disappointed who honoured Picus of Mirandola with this pompous epitaph.

*Hic situs est PICUS MIRANDOLA, cætera noint
Et Tagus et Ganges, forsân et Antipodes.*

His name, then celebrated in the remotest corners of the earth, is now almost forgotten; and his works, then studied, admired, and applauded, are now mouldering in obscurity.

Next in dignity to the bare name is a short character simple and unadorned, without exaggeration, superlatives, or rhetoric. Such were the inscriptions in use among the Romans, in which the victories gained by their emperors were commemorated by a single epithet; as Cæsar *Germanicus*, Cæsar *Dacicus*, *Germanicus*, *Illyricus*. Such would be this epitaph, ISAACUS NEWTONUS, *naturæ legibus investigatis, hic quiescit.*

But to far the greatest part of mankind a longer encomium is necessary for the publication of their virtues, and the preservation of their memories; and in the composition of these it is that art is principally required, and precepts therefore may be useful.

In writing EPITAPHS, one circumstance is to be considered, which affects no other composition; the place in which they are now commonly found restrains them to a particular air of solemnity, and debars

them from the admission of all lighter or gayer ornaments. In this it is that the style of an EPITAPH necessarily differs from that of an ELEGY. The custom of burying our dead either in or near our churches, perhaps originally founded on a rational design of fitting the mind for religious exercises, by laying before it the most affecting proof of the uncertainty of life, makes it proper to exclude from our EPITAPHS all such allusions as are contrary to the doctrines for the propagation of which the churches are erected, and to the end for which those who peruse the monuments must be supposed to come thither. Nothing is, therefore, more ridiculous than to copy the Roman inscriptions, which were engraven on stones by the high-way, and composed by those who generally reflected on mortality only to excite in themselves and others a quicker relish of pleasure, and a more luxurious enjoyment of life, and whose regard for the dead extended no farther than a wish that *the earth might be light upon them*.

All allusions to the heathen mythology are therefore absurd, and all regard for the senseless remains of a dead man impertinent and superstitious. One of the first distinctions of the primitive christians, was their neglect of bestowing garlands on the dead, in which they are very rationally defended by their apologist in Minutius Felix. "We lavish no flowers nor odours on the dead," says he, "because they have no sense of fragrance or of beauty." We profess to reverence the dead, not for their sake, but for our own. It is therefore always with indignation or contempt that I read the epitaph on

Cowley, a man, whose learning and poetry were his lowest merits.

*Aurea dum late volitant tua scripta per orbem,
Et fama eternum vivis, divite Poëta,
Hic placida jaceas requie, custodiat urnam
Cana Fides, vigilantque perenni lampade Musa!
Sit sacer ille locus, nec quis temerarius auset
Sacilega turbare manu venerabile bustum.
Intacti maneant, maneant per secula dulces
COWLEY cineres, serventque immobile saxum.*

To pray that the ashes of a friend may lie undisturbed, and that the divinities that favoured him in his life, may watch for ever round him to preserve his tomb from violation, and drive sacrilege away, is only rational in him who believes the soul interested in the repose of the body, and the powers which he invokes for its protection able to preserve it. To censure such expressions as contrary to religion, or as remains of heathen superstition, would be too great a degree of severity. I condemn them only as un-instructive and un-affecting, as too ludicrous for reverence or grief, for christianity and a temple.

That the designs and decorations of monuments ought likewise to be formed with the same regard to the solemnity of the place, cannot be denied: it is an established principle, that all ornaments owe their beauty to their propriety. The same glitter of dress that adds graces to gaiety and youth, would make age and dignity contemptible. Charon with his boat is far from heightening the awful grandeur of the universal judgment, though drawn by Angelo himself; nor is it easy to imagine a greater absurdity than that

of gracing the walls of a christian temple with the figure of Mars leading a hero to battle, or Cupids sporting round a virgin. The pope who defaced the statues of the deities at the tomb of Sannazarius is, in my opinion, more easily to be defended, than he that erected them.

It is for the same reason improper to address the EPITAPH to the passenger, a custom which an injudicious veneration for antiquity introduced again at the revival of letters, and which, among many others, Passeratius suffered to mislead him in his EPITAPH upon the heart of Henry king of France, who was stabbed by Clement the monk, which yet deserves to be inserted, for the sake of shewing how beautiful even improprieties may become, in the hands of a good writer.

*Adsta, viator, et dole regum vices,
Cor Regis isto conditur sub marmore,
Qui jura Gallis, jura Sarmatis dedit.
Tectus cucullo hunc sustulit sicarius.
Abi, viator, et dole regum vices.*

In the monkish ages, however ignorant and unpolished, the EPITAPHS were drawn up with far greater propriety than can be shewn in those which more enlightened times have produced.

Orate pro Anima—miserrimi Peccatoris,

was an address to the last degree striking and solemn, as it flowed naturally from the religion then believed, and awakened in the reader sentiments of benevolence for the deceased, and of concern for his own happiness. There was nothing trifling or ludicrous,

nothing that did not tend to the noblest end, the propagation of piety and the increase of devotion.

It may seem very superfluous to lay it down as the first rule for writing EPITAPHS, that the name of the deceased is not to be omitted; nor should I have thought such a precept necessary, had not the practice of the greatest writers shewn, that it has not been sufficiently regarded. In most of the poetical EPITAPHS, the names for whom they were composed, may be sought to no purpose, being only prefixed on the monument. To expose the absurdity of this omission, it is only necessary to ask how the EPITAPHS, which have outlived the stones on which they were inscribed, would have contributed to the information of posterity, had they wanted the names of those whom they celebrated.

In drawing the character of the deceased, there are no rules to be observed which do not equally relate to other compositions. The praise ought not to be general, because the mind is lost in the extent of any indefinite idea, and cannot be affected with what it cannot comprehend. When we hear only of a good or great man, we know not in what class to place him, nor have any notion of his character, distinct from that of a thousand others; his example can have no effect upon our conduct, as we have nothing remarkable or eminent to propose to our imitation. The EPITAPH composed by Ennius for his own tomb, has both the faults last mentioned.

Nemo me decoret lacrumis, nec funera, fletu

Fuxit. Cur? volito vivu' per ora virum,

The reader of this EPITAPH receives scarce any idea from it; he neither conceives any veneration for the man to whom it belongs, nor is instructed by what methods this boasted reputation is to be obtained.

Though a sepulchral inscription is professedly a panegyric, and, therefore, not confined to historical impartiality, yet it ought always to be written with regard to truth. No man ought to be commended for virtues which he never possessed, but whoever is curious to know his faults must inquire after them in other places; the monuments of the dead are not intended to perpetuate the memory of crimes, but to exhibit patterns of virtue. On the tomb of Mæcenas his luxury is not to be mentioned with his munificence, nor is the proscription to find a place on the monument of Augustus.

The best subject for EPITAPHS is private virtue; virtue exerted in the same circumstances in which the bulk of mankind are placed, and which, therefore, may admit of many imitators. He that has delivered his country from oppression, or freed the world from ignorance and error, can excite the emulation of a very small number; but he that has repelled the temptations of poverty, and disdained to free himself from distress at the expence of his virtue, may animate multitudes, by his example, to the same firmness of heart and steadiness of resolution.

Of this kind I cannot forbear the mention of two Greek inscriptions; one upon a man whose writings are well known, the other upon a person whose memory is preserved only in her EPITAPH, who both

lived in slavery, the most calamitous estate in human life :

Ζωσιμη ή πριν εκσα μονω τω σωματι δελη,
Και τω σωματι νυν ευρειν ελευθεριην.

ZOSIMA, quæ solo fuit olim corpore serva,
Corpore nunc etiam libera facta fuit.

“ZOSIMA, who in her life could only have her body enslaved, now finds her body likewise set at liberty.”

It is impossible to read this EPITAPH without being animated to bear the evils of life with constancy, and to support the dignity of human nature under the most pressing afflictions, both by the example of the heroine, whose grave we behold, and the prospect of that state in which, to use the language of the inspired writers, “The poor cease from their labours, and the weary be at rest.”——

The other is upon Epictetus, the Stoic philosopher :

Δελη Επικτητῶ γενομένη, και σωμ' αναπηρῶ ;
Και πωνιην Ιρῶ, και φιλῶ Αθανατοις.

Servus Epictetus, mutilatus corpore vixi
Pauperieque Irvs, curaque prima Deúm.

“EPICTETUS, who lies here, was a slave and a cripple, poor as the beggar in the proverb, and the favourite of Heaven.”

In this distich is comprised the noblest panegyric, — and the most important instruction. We may learn from it, that virtue is impracticable in no condition,

since Epictetus could recommend himself to the regard of Heaven, amidst the temptations of poverty and slavery : slavery, which has always been found so destructive to virtue, that in many languages a slave and a thief are expressed by the same word. And we may be likewise admonished by it, not to lay any stress on a man's outward circumstances, in making an estimate of his real value, since Epictetus the beggar, the cripple, and the slave, was the favourite of Heaven.

POLITICAL ESSAYS.

OBSERVATIONS

ON THE

STATE OF AFFAIRS IN M.DCC.LVI.

THE time is now come in which every Englishman expects to be informed of the national affairs, and in which he has a right to have that expectation gratified. For whatever may be urged by ministers, or those whom vanity or interest make the followers of ministers, concerning the necessity of confidence in our governors, and the presumption of prying with profane eyes into the recesses of policy, it is evident, that this reverence can be claimed only by counsels yet unexecuted, and projects suspended in deliberation. But when a design has ended in miscarriage or success, when every eye and every ear is witness to general discontent, or general satisfaction, it is then a proper time to disentangle confusion, and illustrate obscurity, to shew

by what causes every event was produced, and in what effects it is likely to terminate: to lay down with distinct particularity what rumour always huddles in general exclamations, or perplexes by undigested narratives; to shew whence happiness or calamity is derived, and whence it may be expected; and honestly to lay before the people what inquiry can gather of the past, and conjecture can estimate of the future.

The general subject of the present war is sufficiently known. It is allowed on both sides, that hostilities began in America, and that the French and English quarrelled about the boundaries of their settlements, about grounds and rivers to which, I am afraid, neither can shew any other right than that of power, and which neither can occupy but by usurpation, and the dispossession of the natural lords and original inhabitants. Such is the contest, that no honest man can heartily wish success to either party.

It may indeed be alleged, that the Indians have granted large tracts of land both to one and to the other; but these grants can add little to the validity of our titles, till it be experienced how they were obtained: for if they were extorted by violence, or induced by fraud; by threats, which the miseries of other nations had shewn not to be vain, or by promises of which no performance was ever intended, what are they but new modes of usurpation, but new instances of cruelty and treachery?

And indeed what but false hope or resistless terror can prevail upon a weaker nation to invite a stronger into their country, to give their lands to strangers

whom no affinity of manners, or similitude of opinion, can be said to recommend, to permit them to build towns from which the natives are excluded, to raise fortresses by which they are intimidated, to settle themselves with such strength, that they cannot afterwards be expelled, but are for ever to remain the masters of the original inhabitants, the dictators of their conduct, and the arbiters of their fate ?

When we see men acting thus against the precepts of reason, and the instincts of nature, we cannot hesitate to determine, that by some means or other they were debarred from choice ; that they were lured or frightened into compliance ; that they either granted only what they found impossible to keep, or expected advantages upon the faith of their new inmates, which there was no purpose to confer upon them. It cannot be said, that the Indians originally invited us to their coasts ; we went uncalled and unexpected to nations who had no imagination that the earth contained any inhabitants so distant and so different from themselves. We astonished them with our ships, with our arms, and with our general superiority. They yielded to us as to beings of another and higher race, sent among them from some unknown regions, with power which naked Indians could not resist, and which they were therefore, by every act of humility, to propitiate, that they, who could so easily destroy, might be induced to spare.

To this influence, and to this only, are to be attributed all the cessions and submissions of the Indian princes, if indeed any such cessions were ever made, of which we have no witness but those who claim

from them ; and there is no great malignity in suspecting that those who have robbed have also lied.

Some colonies indeed have been established more peaceably than others. The utmost extremity of wrong has not always been practised ; but those that have settled in the new world on the fairest terms, have no other merit than that of a scrivener who ruins in silence, over a plunderer that seizes by force ; all have taken what had other owners, and all have had recourse to arms, rather than quit the prey on which they had fastened.

The American dispute between the French and us is therefore only the quarrel of two robbers for the spoils of a passenger ; but as robbers have terms of confederacy, which they are obliged to observe as members of the gang, so the English and French may have relative rights, and do injustice to each other, while both are injuring the Indians. And such, indeed, is the present contest : they have parted the northern continent of America between them, and are now disputing about their boundaries, and each is endeavouring the destruction of the other by the help of the Indians, whose interest it is that both should be destroyed.

Both nations clamour with great vehemence about infractions of limits, violation of treaties, open usurpation, insidious artifices, and breach of faith. The English rail at the perfidious French, and the French at the encroaching English ; they quote treaties on each side, charge each other with aspiring to universal monarchy, and complain on either part of the insecurity of possession near such turbulent neighbours.

Through this mist of controversy it can raise no wonder that the truth is not easily discovered. When a quarrel has been long carried on between individuals, it is often very hard to tell by whom it was begun. Every fact is darkened by distance, by interest, and by multitudes. Information is not easily procured from far; those whom the truth will not favour, will not step voluntarily forth to tell it; and where there are many agents, it is easy for every single action to be concealed.

All these causes concur to the obscurity of the question, "By whom were hostilities in America commenced?" Perhaps there never can be remembered a time in which hostilities had ceased. Two powerful colonies inflamed with immemorial rivalry, and placed out of the superintendence of the mother nations, were not likely to be long at rest. Some opposition was always going forward, some mischief was every day done or meditated, and the borderers were always better pleased with what they could snatch from their neighbours, than what they had of their own.

In this disposition to reciprocal invasion a cause of dispute never could be wanting. The forests and deserts of America are without land-marks, and therefore cannot be particularly specified in stipulations; the appellations of those wide-extended regions have in every mouth a different meaning, and are understood on either side as inclination happens to contract or extend them. Who has yet pretended to define how much of America is included in Brazil, Mexico, or Peru? It is almost as easy to divide the Atlantic

ocean by a line, as clearly to ascertain the limits of those uncultivated, uninhabitable, unmeasured regions.

It is likewise to be considered, that contracts concerning boundaries are often left vague and indefinite without necessity, by the desire of each party, to interpret the ambiguity to its own advantage when a fit opportunity shall be found. In forming stipulations, the commissaries are often ignorant, and often negligent; they are sometimes weary with debate, and contract a tedious discussion into general terms, or refer it to a former treaty, which was never understood. The weaker part is always afraid of requiring explanations, and the stronger always has an interest in leaving the question undecided: thus it will happen, without great caution on either side, that after long treaties solemnly ratified, the rights that had been disputed are still equally open to controversy.

In America, it may easily be supposed, that there are tracts of land not yet claimed by either party, and therefore mentioned in no treaties, which yet one or the other may be afterwards inclined to occupy; but to these vacant and unsettled countries each nation may pretend, as each conceives itself intitled to all that is not expressly granted to the other.

Here then is a perpetual ground of contest: every enlargement of the possessions of either will be considered as something taken from the other, and each will endeavour to regain what had never been claimed, but that the other occupied it.

Thus obscure in its original is the American contest. It is difficult to find the first invader, or to tell where

invasion properly begins; but I suppose it is not to be doubted, that after the last war, when the French had made peace with such apparent superiority, they naturally began to treat us with less respect in distant parts of the world, and to consider us as a people from whom they had nothing to fear, and who could no longer presume to contravene their designs, or to check their progress.

The power of doing wrong with impunity seldom waits long for the will; and it is reasonable to believe, that in America the French would avow their purpose of aggrandizing themselves with at least as little reserve as in Europe. We may therefore readily believe, that they were unquiet neighbours, and had no great regard to right, which they believed us no longer able to enforce.

That in forming a line of forts behind our colonies, if in no other part of their attempt, they had acted against the general intention, if not against the literal terms of treaties, can scarcely be denied; for it never can be supposed that we intended to be enclosed between the sea and the French garrisons, or preclude ourselves from extending our plantations backwards to any length that our convenience should require.

With dominion is conferred every thing that can secure dominion. He that has the coast, has likewise the sea to a certain distance; he that possesses a fortress, has the right of prohibiting another fortress to be built within the command of its cannon. When therefore we planted the coast of North-America, we supposed the possession of the inland region granted to an indefinite extent, and every nation that settled in that

part of the world, seems, by the permission of every other nation, to have made the same supposition in its own favour.

Here then, perhaps, it will be safest to fix the justice of our cause; here we are apparently and indisputably injured, and this injury may, according to the practice of nations, be justly resented. Whether we have not in return made some encroachments upon them, must be left doubtful, till our practices on the Ohio shall be stated and vindicated. There are no two nations confining on each other, between whom a war may not always be kindled with plausible pretences on either part, as there is always passing between them a reciprocation of injuries, and fluctuation of encroachments.

From the conclusion of the last peace perpetual complaints of the supplantations and invasions of the French have been sent to Europe from our colonies, and transmitted to our ministers at Paris, where good words were sometimes given us, and the practices of the American commanders were sometimes disowned, but no redress was ever obtained, nor is it probable that any prohibition was sent to America. We were still amused with such doubtful promises as those who are afraid of war are ready to interpret in their own favour, and the French pushed forward their line of fortresses, and seemed to resolve that before our complaints were finally dismissed, all remedy should be hopeless.

We likewise endeavoured at the same time to form a barrier against the Canadians by sending a colony to New Scotland, a cold uncomfortable tract of ground, of which we had long the nominal pos-

session before we really began to occupy it. To this those were invited whom the cessation of war deprived of employment, and made burthensome to their country; and settlers were allured thither by many fallacious descriptions of fertile valleys and clear skies. What effects these pictures of American happiness had upon my countrymen, I was never informed, but I suppose very few sought provision in those frozen regions, whom guilt or poverty did not drive from their native country. About the boundaries of this new colony there were some disputes, but as there was nothing yet worth a contest, the power of the French was not much exerted on that side; some disturbance was however given, and some skirmishes ensued. But perhaps being peopled chiefly with soldiers, who would rather live by plunder than by agriculture, and who consider war as their best trade, New Scotland would be more obstinately defended than some settlements of far greater value; and the French are too well informed of their own interest, to provoke hostility for no advantage, or to select that country for invasion, where they must hazard much and can win little. They therefore pressed on southward behind our ancient and wealthy settlements, and built fort after fort at such distances that they might conveniently relieve one another, invade our colonies with sudden incursions, and retire to places of safety before our people could unite to oppose them.

This design of the French has been long formed, and long known, both in America and Europe, and might at first have been easily repressed, had force been used instead of expostulation. When the English attempted a settlement upon the island of St. Lucia,

the French, whether justly or not, considering it as neutral and forbidden to be occupied by either nation, immediately landed upon it, and destroyed the houses, wasted the plantations, and drove or carried away the inhabitants. This was done in the time of peace, when mutual professions of friendship were daily exchanged by the two courts, and was not considered as any violation of treaties, nor was any more than a very soft remonstrance made on our part.

The French therefore taught us how to act; but an Hanoverian quarrel with the house of Austria for some time induced us to court, at any expence, the alliance of a nation whose very situation makes them our enemies. We suffered them to destroy our settlements, and to advance their own, which we had an equal right to attack. The time however came at last, when we ventured to quarrel with Spain, and then France no longer suffered the appearance of peace to subsist between us, but armed in defence of her ally.

The events of the war are well known; we pleased ourselves with a victory at Dettingen, where we left our wounded men to the care of our enemies, but our army was broken at Fontenoy and Val; and though after the disgrace which we suffered in the Mediterranean, we had some naval success, and an accidental dearth made peace necessary for the French, yet they prescribed the conditions, obliged us to give hostages, and acted as conquerors, though as conquerors of moderation.

In this war the Americans distinguished themselves in a manner unknown and unexpected. The New English raised an army, and under the command of Pepperel took Cape Breton, with the assistance of the

fleet. This is the most important fortress in America. We pleased ourselves so much with the acquisition, that we could not think of restoring it; and, among the arguments used to inflame the people against Charles Stuart, it was very clamorously urged, that if he gained the kingdom, he would give Cape Breton back to the French.

The French however had a more easy expedient to regain Cape Breton than by exalting Charles Stuart to the English throne. They took in their turn Fort St. George, and had our East India Company wholly in their power, whom they restored at the peace to their former possessions, that they may continue to export our silver.

Cape Breton therefore was restored, and the French were re-established in America, with equal power and greater spirit, having lost nothing by the war which they had before gained.

To the general reputation of their arms, and that habitual superiority which they derive from it, they owe their power in America, rather than to any real strength, or circumstances of advantage. Their numbers are yet not great; their trade, though daily improved, is not very extensive; their country is barren; their fortresses, though numerous, are weak, and rather shelters from wild beasts, or savage nations, than places built for defence against bombs or cannons. Cape Breton has been found not to be impregnable; nor, if we consider the state of the places possessed by the two nations in America, is there any reason upon which the French should have presumed to molest us, but that they thought our spirit so broken that we

durst not resist them; and in this opinion our long forbearance easily confirmed them.

We forgot, or rather avoided to think, that what we delayed to do must be done at last, and done with more difficulty, as it was delayed longer; that while we were complaining, and they were eluding, or answering our complaints, fort was rising upon fort, and one invasion made a precedent for another.

This confidence of the French is exalted by some real advantages. If they possess in those countries less than we, they have more to gain, and less to hazard; if they are less numerous, they are better united.

The French compose one body with one head. They have all the same interest, and agree to pursue it by the same means. They are subject to a governor, commissioned by an absolute monarch, and participating the authority of his master. Designs are therefore formed without debate, and executed without impediment. They have yet more martial than mercantile ambition, and seldom suffer their military schemes to be entangled with collateral projects of gain: they have no wish but for conquest, of which they justly consider riches as the consequence.

Some advantages they will always have as invaders. They make war at the hazard of their enemies: the contest being carried on in our territories, we must lose more by a victory, than they will suffer by a defeat. They will subsist, while they stay, upon our plantations; and perhaps destroy them when they can stay no longer. If we pursue them, and carry the war into their dominions, our difficulties will increase

every step as we advance, for we shall leave plenty behind us, and find nothing in Canada but lakes and forests barren and trackless; our enemies will shut themselves up in their forts, against which it is difficult to bring cannon through so rough a country, and which, if they are provided with good magazines, will soon starve those who besiege them.

All these are the natural effects of their government and situation; they are accidentally more formidable as they are less happy. But the favour of the Indians which they enjoy, with very few exceptions, among all the nations of the northern continent, we ought to consider with other thoughts; this favour we might have enjoyed, if we had been careful to deserve it. The French, by having these savage nations on their side, are always supplied with spies and guides, and with auxiliaries, like the Tartars to the Turks, or the Hussars to the Germans, of no great use against troops ranged in order of battle, but very well qualified to maintain a war among woods and rivulets, where much mischief might be done by unexpected onsets, and safety be obtained by quick retreats. They can waste a colony by sudden inroads, surprise the straggling planters, frighten the inhabitants into towns, hinder the cultivation of lands, and starve those whom they are not able to conquer.

AN

INTRODUCTION

TO THE

POLITICAL STATE OF GREAT-BRITAIN.

WRITTEN IN THE YEAR 1756.

THE present system of English politics may properly be said to have taken rise in the reign of Queen Elizabeth. At this time, the Protestant religion was established, which naturally allied us to the reformed state, and made all the popish powers our enemies.

We began in the same reign to extend our trade, by which we made it necessary to ourselves to watch the commercial progress of our neighbours; and, if not to incommode and obstruct their traffic, to hinder them from impairing ours.

We then likewise settled colonies in America, which was become the great scene of European ambition; for, seeing with what treasures the Spaniards were annually enriched from Mexico and Peru, every nation imagined, that an American conquest or plantation would certainly fill the mother country with gold and silver. This produced a large extent of very distant dominions, of which we, at this time,

neither knew nor foresaw the advantage or incumbrance : we seem to have snatched them into our hands, upon no very just principles of policy, only because every state, according to a prejudice of long continuance, concludes itself more powerful as its territories become larger.

The discoveries of new regions, which were then every day made, the profit of remote traffic, and the necessity of long voyages, produced, in a few years, a great multiplication of shipping. The sea was considered as the wealthy element ; and, by degrees, a new kind of sovereignty arose, called naval dominion.

As the chief trade of the world, so the chief maritime power was at first in the hands of the Portuguese and Spaniards, who, by a compact, to which the consent of other princes was not asked, had divided the newly-discovered countries between them ; but the crown of Portugal having fallen to the king of Spain, or being seized by him, he was master of the ships of the two nations, with which he kept all the coasts of Europe in alarm, till the Armada, which he had raised at a vast expence for the conquest of England, was destroyed, which put a stop, and almost an end, to the naval power of the Spaniards.

At this time the Dutch, who were oppressed by the Spaniards, and feared yet greater evils than they felt, resolved no longer to endure the insolence of their masters : they therefore revolted ; and after a struggle, in which they were assisted by the money and forces of Elizabeth, erected an independent and powerful commonwealth.

When the inhabitants of the Low-Countries had

formed their system of government, and some remission of the war gave them leisure to form schemes of future prosperity, they easily perceived, that as their territories were narrow, and their numbers small, they could preserve themselves only by that power which is the consequence of wealth; and that by a people whose country produced only the necessaries of life, wealth was not to be acquired, but from foreign dominions, and by the transportation of the products of one country into another.

From this necessity, thus justly estimated, arose a plan of commerce, which was for many years prosecuted with industry and success, perhaps never seen in the world before, and by which the poor tenants of mud-walled villages and impassable bogs, erected themselves into high and mighty states, who put the greatest monarchs at defiance, whose alliance was courted by the proudest, and whose power was dreaded by the fiercest nation. By the establishment of this state there arose to England a new ally, and a new rival.

At this time, which seems to be the period destined for the change of the face of Europe, France began first to rise into power; and, from defending her own provinces with difficulty and fluctuating success, to threaten her neighbours with encroachments and devastations. Henry the Fourth having, after a long struggle, obtained the crown, found it easy to govern nobles exhausted and wearied with a long civil war, and having composed the disputes between the Protestants and Papists, so as to obtain at least a truce for both parties, was at leisure to accumulate treasure, and raise forces, which he pur-

posed to have employed in a design of settling for ever the balance of Europe. Of this great scheme he lived not to see the vanity, or to feel the disappointment; for he was murdered in the midst of his mighty preparations.

The French, however, were in this reign taught to know their own power; and the great designs of a king, whose wisdom they had so long experienced, even though they were not brought to actual experiment, disposed them to consider themselves as masters of the destiny of their neighbours; and, from that time, he that shall nicely examine their schemes and conduct, will, I believe, find that they began to take an air of superiority to which they had never pretended before; and that they have been always employed more or less openly upon schemes of dominion, though with frequent interruptions from domestic troubles, and with those intermissions which human counsels must always suffer, as men intrusted with great affairs are dissipated in youth, and languid in age, are embarrassed by competitors, or, without any external reason, change their minds.

France was now no longer in dread of insults and invasions from England. She was not only able to maintain her own territories, but prepared, on all occasions, to invade others; and we had now a neighbour whose interest it was to be an enemy, and who has disturbed us, from that time to this, with open hostility or secret machinations.

Such was the state of England and its neighbours, when Elizabeth left the crown to James of Scotland. It has not, I think, been frequently observed by historians at how critical a time the union of the

two kingdoms happened. Had England and Scotland continued separate kingdoms, when France was established in the full possession of her natural power, the Scots, in continuance of the league, which it would now have been more than ever their interest to observe, would, upon every instigation of the French court, have raised an army with French money, and harassed us with an invasion, in which they would have thought themselves successful, whatever numbers they might have left behind them. To a people warlike and indigent, an incursion into a rich country is never hurtful. The pay of France and the plunder of the northern counties, would always have tempted them to hazard their lives, and we should have been under a necessity of keeping a line of garrisons along our border.

This trouble, however, we escaped by the accession of king James; but it is uncertain, whether his natural disposition did not injure us more than his accidental condition happened to benefit us. He was a man of great theoretical knowledge, but of no practical wisdom; he was very well able to discern the true interest of himself, his kingdom, and his posterity, but sacrificed it, upon all occasions, to his present pleasure or his present ease; so conscious of his own knowledge and abilities, that he would not suffer a minister to govern, and so lax of attention, and timorous of opposition, that he was not able to govern for himself. With this character James quietly saw the Dutch invade our commerce; the French grew every day stronger and stronger; and the Protestant interest, of which he boasted himself the head, was op-

pressed on every side, while he writ, and hunted, and dispatched ambassadors, who, when their master's weakness was once known, were treated in foreign courts with very little ceremony. James, however, took care to be flattered at home, and was neither angry nor ashamed at the appearance that he made in other countries.

Thus England grew weaker, or, what is in political estimation the same thing, saw her neighbours grow stronger, without receiving proportionable additions to her own power. Not that the mischief was so great as it is generally conceived or represented; for, I believe, it may be made to appear, that the wealth of the nation was, in this reign, very much increased, though that of the crown was lessened. Our reputation for war was impaired; but commerce seems to have been carried on with great industry and vigour, and nothing was wanting, but that we should have defended ourselves from the encroachments of our neighbours.

The inclination to plant colonies in America still continued, and this being the only project in which men of adventure and enterprise could exert their qualities in a pacific reign, multitudes, who were discontented with their condition in their native country, and such multitudes there will always be, sought relief, or at least a change, in the western regions, where they settled in the northern part of the continent, at a distance from the Spaniards, at that time almost the only nation that had any power or will to obstruct us.

Such was the condition of this country when the unhappy Charles inherited the crown. He had seen the errors of his father, without being able to prevent them, and, when he began his reign, endeavoured to raise the nation to its former dignity. The French Papists had begun a new war upon the Protestants: Charles sent a fleet to invade Rhée and relieve Rochelle, but his attempts were defeated, and the Protestants were subdued. The Dutch, grown wealthy and strong, claimed the right of fishing in the British seas: this claim the king, who saw the increasing power of the states of Holland, resolved to contest. But for this end it was necessary to build a fleet, and a fleet could not be built without expence: he was advised to levy ship-money, which gave occasion to the Civil War, of which the events and conclusion are too well known.

While the inhabitants of this island were embroiled among themselves, the power of France and Holland was every day increasing. The Dutch had overcome the difficulties of their infant commonwealth; and as they still retained their vigour and industry, from rich grew continually richer, and from powerful more powerful. They extended their traffic, and had not yet admitted luxury; so that they had the means and the will to accumulate wealth without any incitement to spend it. The French, who wanted nothing to make them powerful, but a prudent regulation of their revenues, and a proper use of their natural advantages, by the successive care of skilful ministers, became every day stronger, and more conscious of their strength.

About this time it was, that the French first began to turn their thoughts to traffic and navigation, and to desire like other nations an American territory. All the fruitful and valuable parts of the western world were already either occupied or claimed, and nothing remained for France but the leavings of other navigators, for she was not yet haughty enough to seize what the neighbouring powers had already appropriated.

The French therefore contented themselves with sending a colony to Canada, a cold uncomfortable uninviting region, from which nothing but furs and fish were to be had, and where the new inhabitants could only pass a laborious and necessitous life, in perpetual regret of the deliciousness and plenty of their native country.

Notwithstanding the opinion which our countrymen have been taught to entertain of the comprehension and foresight of French politicians, I am not able to persuade myself, that when this colony was first planted, it was thought of much value, even by those that encouraged it; there was probably nothing more intended than to provide a drain into which the waste of an exuberant nation might be thrown, a place where those who could do no good might live without the power of doing mischief. Some new advantage they undoubtedly saw, or imagined themselves to see, and what more was necessary to the establishment of the colony was supplied by natural inclination to experiments, and that impatience of doing nothing, to which mankind perhaps owe much of what is imagined to be effected by more splendid motives.

In this region of desolate sterility they settled themselves, upon whatever principle; and as they have from that time had the happiness of a government by which no interest has been neglected, nor any part of their subjects overlooked, they have, by continual encouragement and assistance from France, been perpetually enlarging their bounds and increasing their numbers.

These were at first, like other nations who invaded America, inclined to consider the neighbourhood of the natives, as troublesome and dangerous, and are charged with having destroyed great numbers: but they are now grown wiser, if not honester, and instead of endeavouring to frighten the Indians away, they invite them to intermarriage and cohabitation, and allure them by all practicable methods to become the subjects of the king of France.

If the Spaniards, when they first took possession of the newly-discovered world, instead of destroying the inhabitants by thousands, had either had the urbanity or the policy to have conciliated them by kind treatment, and to have united them gradually to their own people, such an accession might have been made to the power of the king of Spain, as would have made him far the greatest monarch that ever yet ruled in the globe; but the opportunity was lost by foolishness and cruelty, and now can never be recovered.

When the parliament had finally prevailed over our king, and the army over the parliament, the interest of the two commonwealths of England and Holland soon appeared to be opposite, and a new government declared war against the Dutch. In this

contest was exerted the utmost power of the two nations, and the Dutch were finally defeated, yet not with such evidence of superiority as left us much reason to boast our victory; they were obliged however to solicit peace, which was granted them on easy conditions; and Cromwell, who was now possessed of the supreme power, was left at leisure to pursue other designs.

The European powers had not yet ceased to look with envy on the Spanish acquisitions in America, and therefore Cromwell thought, that if he gained any part of these celebrated regions, he should exalt his own reputation and enrich the country. He therefore quarrelled with the Spaniards upon some such subject of contention as he that is resolved upon hostility may always find, and sent Penn and Venables into the western seas. They first landed in Hispaniola, whence they were driven off with no great reputation to themselves; and that they might not return without having done something, they afterwards invaded Jamaica, where they found less resistance, and obtained that island, which was afterwards consigned to us, being probably of little value to the Spaniards, and continues to this day a place of great wealth, and dreadful wickedness, a den of tyrants, and a dungeon of slaves.

Cromwell, who perhaps had not leisure to study foreign politics, was very fatally mistaken with regard to Spain and France. Spain had been the last power in Europe, which had openly pretended to give law to other nations, and the memory of this terror remained when the real cause was at an end. We had more lately been frightened by Spain than by France,

and though very few were then alive of the generation that had their sleep broken by the Armada, yet the name of the Spaniards was still terrible, and a war against them was pleasing to the people.

Our own troubles had left us very little desire to look out upon the continent, and inveterate prejudice hindered us from perceiving, that for more than half a century the power of France had been increasing, and that of Spain had been growing less; nor does it seem to have been remembered, which yet required no great depth of policy to discern, that of two monarchs, neither of which could be long our friend, it was our interest to have the weaker near us; or that if a war should happen, Spain, however wealthy or strong in herself, was by the dispersion of her territories more obnoxious to the attacks of a naval power, and consequently had more to fear from us, and had it less in her power to hurt us.

All these considerations were overlooked by the wisdom of that age, and Cromwell assisted the French to drive the Spaniards out of Flanders, at a time when it was our interest to have supported the Spaniards against France, as formerly the Hollanders against Spain, by which we might at least have retarded the growth of the French power, though I think it must have finally prevailed.

During this time our colonies, which were less disturbed by our commotions than the mother-country, naturally increased; it is probable that many who were unhappy at home took shelter in those remote regions, where, for the sake of in-

viting greater numbers, every one was allowed to think and live his own way. The French settlement in the mean time went slowly forward, too inconsiderable to raise any jealousy, and too weak to attempt any encroachments.

When Cromwell died, the confusions that followed produced the restoration of monarchy, and some time was employed in repairing the ruins of our constitution, and restoring the nation to a state of peace. In every change there will be many that suffer real or imaginary grievances, and therefore many will be dissatisfied. This was, perhaps, the reason why several colonies had their beginning in the reign of Charles the Second. The Quakers willingly sought refuge in Pennsylvania; and it is not unlikely that Carolina owed its inhabitants to the remains of that restless disposition, which had given so much disturbance to our country, and had now no opportunity of acting at home.

The Dutch still continuing to increase in wealth and power, either kindled the resentment of their neighbours by their insolence, or raised their envy by their prosperity. Charles made war upon them without much advantage: but they were obliged at last to confess him the sovereign of the narrow seas. They were reduced almost to extremities by an invasion from France; but soon recovered from their consternation, and, by the fluctuation of war, regained their cities and provinces with the same speed as they had lost them.

During the time of Charles the Second the power of France was every day increasing; and Charles, who never disturbed himself with remote conse-

quences, saw the progress of her arms, and the extension of her dominions, with very little uneasiness. He was indeed sometimes driven by the prevailing faction into confederacies against her; but as he had, probably, a secret partiality in her favour, he never persevered long in acting against her, nor ever acted with much vigour: so that, by his feeble resistance, he rather raised her confidence than hindered her designs.

About this time the French first began to perceive the advantage of commerce, and the importance of a naval force; and such encouragement was given to manufactures, and so eagerly was every project received by which trade could be advanced, that, in a few years, the sea was filled with their ships, and all the parts of the world crowded with their merchants. There is, perhaps, no instance in human story of such a change produced, in so short a time, in the schemes and manners of a people, of so many new sources of wealth opened, and such numbers of artificers and merchants made to start out of the ground, as was seen in the ministry of Colbert.

Now it was that the power of France became formidable to England. Her dominions were large before, and her armies numerous; but her operations were necessarily confined to the continent. She had neither ships for the transportation of her troops, nor money for their support in distant expeditions. Colbert saw both these wants, and saw that commerce only would supply them. The fertility of their country furnishes the French with commodities; the poverty of the common people keeps the price of labour low. By the obvious practice of selling much and buying

little, it was apparent that they would soon draw the wealth of other countries into their own ; and, by carrying out their merchandise in their own vessels, a numerous body of sailors would quickly be raised.

This was projected, and this was performed. The king of France was soon enabled to bribe those whom he could not conquer, and to terrify with his fleets those whom his armies could not have approached. The influence of France was suddenly diffused all over the globe ; her arms were dreaded, and her pensions received in remote regions, and those were almost ready to acknowledge her sovereignty, who, a few years before, had scarcely heard her name. She thundered on the coasts of Africa, and received ambassadors from Siam.

So much may be done by one wise man endeavouring with honesty the advantage of the public. But that we may not rashly condemn all ministers as wanting wisdom or integrity whose counsels have produced no such apparent benefits to their country, it must be considered, that Colbert had means of acting, which our government does not allow. He could enforce all his orders by the power of an absolute monarch ; he could compel individuals to sacrifice their private profit to the general good ; he could make one understanding preside over many hands, and remove difficulties by quick and violent expedients. Where no man thinks himself under any obligation to submit to another, and, instead of co-operating in one great scheme, every one hastens through by-paths to private profit, no great change can suddenly be made ; nor is superior knowledge

of much effect, where every man resolves to use his own eyes and his own judgment, and every one applauds his own dexterity and diligence, in proportion as he becomes rich sooner than his neighbour.

Colonies are always the effects and causes of navigation. They who visit many countries find some in which pleasure, profit, or safety invite them to settle; and these settlements, when they are once made, must keep a perpetual correspondence with the original country to which they are subject, and on which they depend for protection in danger, and supplies in necessity. So that a country, once discovered and planted, must always find employment for shipping, more certainly than any foreign commerce, which, depending on casualties, may be sometimes more and sometimes less, and which other nations may contract or suppress. A trade to colonies can never be much impaired, being, in reality, only an intercourse between distant provinces of the same empire, from which intruders are easily excluded; likewise the interest and affection of the correspondent parties, however distant, is the same.

On this reason all nations, whose power has been exerted on the ocean, have fixed colonies in remote parts of the world; and while those colonies subsisted, navigation, if it did not increase, was always preserved from total decay. With this policy the French were well acquainted, and therefore improved and augmented the settlements in America, and other regions, in proportion as they advanced their schemes of naval greatness.

The exact time in which they made their acquisitions in America, or other quarters of the globe, it is not necessary to collect. It is sufficient to observe, that their trade and their colonies increased together; and if their naval armaments were carried on, as they really were, in greater proportion to their commerce, than can be practised in other countries, it must be attributed to the martial disposition at that time prevailing in the nation, to the frequent wars which Lewis the Fourteenth made upon his neighbours, and to the extensive commerce of the English and Dutch, which afforded so much plunder to privateers, that war was more lucrative than traffic.

Thus the naval power of France continued to increase during the reign of Charles the Second, who, between his fondness of ease and pleasure, the struggles of faction which he could not suppress, and his inclination to the friendship of absolute monarchy, had not much power or desire to repress it. And of James the Second, it could not be expected that he should act against his neighbours with great vigour, having the whole body of his subjects to oppose. He was not ignorant of the real interest of his country; he desired its power and its happiness, and thought rightly, that there is no happiness without religion; but he thought very erroneously and absurdly, that there is no religion without popery.

When the necessity of self-preservation had impelled the subjects of James to drive him from the throne, there came a time in which the passions, as well as interest of the government, acted against the French, and in which it may perhaps be reason-

ably doubted, whether the desire of humbling France was not stronger than that of exalting England: of this, however, it is not necessary to inquire, since, though the intention may be different, the event will be the same. All mouths were now open to declare what every eye had observed before, that the arms of France were become dangerous to Europe; and that, if her encroachments were suffered a little longer, resistance would be too late.

It was now determined to re-assert the empire of the sea; but it was more easily determined than performed: the French made a vigorous defence against the united power of England and Holland, and were sometimes masters of the ocean, though the two maritime powers were united against them. At length, however, they were defeated at La Hogue; a great part of their fleet was destroyed, and they were reduced to carry on the war only with their privateers, from whom there was suffered much petty mischief, though there was no danger of conquest or invasion. They distressed our merchants, and obliged us to the continual expence of convoys and fleets of observation; and, by skulking in little coves and shallow waters, escaped our pursuit.

In this reign began our confederacy with the Dutch, which mutual interest has now improved into a friendship, conceived by some to be inseparable; and from that time the States began to be termed, in the style of politicians, our faithful friends, the allies which Nature has given us, our Protestant confederates, and by many other names of national endearment. We have, it is true, the same interest, as op-

posed to France, and some resemblance of religion, as opposed to popery; but we have such a rivalry, in respect of commerce, as will always keep us from very close adherence to each other. No mercantile man, or mercantile nation, has any friendship but for money, and alliance between them will last no longer than their common safety or common profit is endangered; no longer than they have an enemy, who threatens to take from each more than either can steal from the other.

We were both sufficiently interested in repressing the ambition, and obstructing the commerce of France; and therefore we concurred with as much fidelity and as regular co-operation as is commonly found. The Dutch were in immediate danger, the armies of their enemies hovered over their country, and therefore they were obliged to dismiss for a time their love of money, and their narrow projects of private profit, and to do what a trader does not willingly at any time believe necessary, to sacrifice a part for the preservation of the whole.

A peace was at length made, and the French with their usual vigour and industry rebuilt their fleets, restored their commerce, and became in a very few years able to contest again the dominion of the sea. Their ships were well built, and always very numerously manned; their commanders, having no hopes but from their bravery or their fortune, were resolute, and being very carefully educated for the sea, were eminently skilful.

All this was soon perceived, when queen Anne, the then darling of England, declared war against

France. Our success by sea, though sufficient to keep us from dejection, was not such as dejected our enemies. It is, indeed, to be confessed, that we did not exert our whole naval strength; Marlborough was the governor of our counsels, and the great view of Marlborough was a war by land, which he knew well how to conduct, both to the honour of his country, and his own profit. The fleet was therefore starved that the army might be supplied, and naval advantages were neglected for the sake of taking a town in Flanders, to be garrisoned by our allies. The French, however, were so weakened by one defeat after another, that, though their fleet was never destroyed by any total overthrow, they at last retained it in their harbours, and applied their whole force to the resistance of the confederate army, that now began to approach their frontiers, and threatened to lay waste their provinces and cities.

In the latter years of this war, the danger of their neighbourhood in America seems to have been considered, and a fleet was fitted out and supplied with a proper number of land forces to seize Quebec, the capital of Canada, or New France; but this expedition miscarried, like that of Anson against the Spaniards, by the lateness of the season, and our ignorance of the coasts on which we were to act. We returned with loss, and only excited our enemies to greater vigilance, and perhaps to stronger fortifications.

When the peace of Utrecht was made, which those who clamoured among us most loudly against it, found it their interest to keep, the French applied themselves with the utmost industry to the extension

of their trade, which we were so far from hindering, that for many years our ministry thought their friendship of such value, as to be cheaply purchased by whatever concession.

Instead therefore of opposing, as we had hitherto professed to do, the boundless ambition of the House of Bourbon, we became on a sudden solicitous for its exaltation, and studious of its interest. We assisted the schemes of France and Spain with our fleets, and endeavoured to make those our friends by servility, whom nothing but power will keep quiet, and who must always be our enemies while they are endeavouring to grow greater, and we determine to remain free.

That nothing might be omitted which could testify our willingness to continue on any terms the good friends of France, we were content to assist not only their conquests but their traffic; and though we did not openly repeal the prohibitory laws, we yet tamely suffered commerce to be carried on between the two nations, and wool was daily imported, to enable them to make cloth, which they carried to our markets, and sold cheaper than we.

During all this time, they were extending and strengthening their settlements in America, contriving new modes of traffic, and framing new alliances with the Indian nations. They began now to find these northern regions, barren and desolate as they are, sufficiently valuable to desire at least a nominal possession, that might furnish a pretence for the exclusion of others; they therefore extended their claim to tracts of land, which they could never hope to occupy, took

care to give their dominions an unlimited magnitude, have given in their maps the name of Louisiana to a country, of which part is claimed by the Spaniards, and part by the English, without any regard to ancient boundaries, or prior discovery.

When the return of Columbus from his great voyage had filled all Europe with wonder and curiosity, Henry the Seventh sent Sebastian Cabot to try what could be found for the benefit of England: he declined the track of Columbus, and steering to the westward, fell upon the island, which, from that time, was called by the English, Newfoundland. Our princes seem to have considered themselves as entitled by their right of prior seizure to the northern parts of America, as the Spaniards were allowed by universal consent their claim to the southern region for the same reason; and we accordingly made our principal settlements within the limits of our own discoveries, and, by degrees, planted the eastern coast from Newfoundland to Georgia.

As we had, according to the European principles, which allow nothing to the natives of these regions, our choice of situation in this extensive country, we naturally fixed our habitations along the coast, for the sake of traffic and correspondence, and all the conveniencies of navigable rivers. And when one port or river was occupied, the next colony, instead of fixing themselves in the inland parts behind the former, went on southward, till they pleased themselves with another maritime situation. For this reason our colonies have more length than depth; their extent from east to west, or from the sea to the interior country, bears no proportion to their reach along the coast from north to south.

It was, however, understood, by a kind of tacit compact among the commercial powers, that possession of the coast included a right to the inland : and, therefore, the charters granted to the several colonies limit their districts only from north to south, leaving their possessions from east to west unlimited and discretionary, supposing that, as the colony increases, they may take lands as they shall want them, the possession of the coasts excluding other navigators, and the unhappy Indians having no right of nature or of nations.

This right of the first European possessor was not disputed till it became the interest of the French to question it. Canada, or New France, on which they made their first settlement, is situated eastward of our colonies, between which they pass up the great river of St. Lawrence, with Newfoundland on the north, and Nova Scotia on the south. Their establishment in this country was neither envied nor hindered ; and they lived here, in no great numbers, a long time, neither molesting their European neighbours, nor molested by them.

But when they grew stronger and more numerous, they began to extend their territories ; and, as it is natural for men to seek their own convenience, the desire of more fertile and agreeable habitations tempted them southward. There is land enough to the north and west of their settlements, which they may occupy with as good right as can be shewn by the other European usurpers, and which neither the English nor Spaniards will contest ; but of this cold region they have enough already, and their resolution was to get a better country. This was not to be had but by settling to the

west of our plantations, on ground which has been hitherto supposed to belong to us.

Hither, therefore, they resolved to remove, and to fix, at their own discretion, the western border of our colonies, which was heretofore considered as unlimited. Thus by forming a line of forts, in some measure parallel to the coast, they enclose us between their garrisons and the sea, and not only hinder our extension westward, but, whenever they have a sufficient navy in the sea, can harass us on each side, as they can invade us at pleasure from one or other of their forts.

This design was not perhaps discovered as soon as it was formed, and was certainly not opposed so soon as it was discovered; we foolishly hoped, that their encroachments would stop, that they would be prevailed on by treaty and remonstrance, to give up what they had taken, or to put limits to themselves. We suffered them to establish one settlement after another, to pass boundary after boundary, and add fort to fort, till at last they grew strong enough to avow their designs, and defy us to obstruct them.

By these provocations long continued, we are at length forced into a war, in which we have had hitherto very ill fortune. Our troops under Braddock were dishonourably defeated; our fleets have yet done nothing more than taken a few merchant-ships, and have distressed some private families, but have very little weakened the power of France. The detention of their seamen makes it indeed less easy for them to fit out their navy; but this deficiency will be easily supplied by the alacrity of the nation, which is always eager for war.

It is displeasing to represent our affairs to our own disadvantage; yet it is necessary to shew the evils which we desire to be removed; and, therefore, some account may very properly be given of the measures which have given them their present superiority.

They are said to be supplied from France with better governors than our colonies have the fate to obtain from England. A French governor is seldom chosen for any other reason than his qualifications for his trust. To be a bankrupt at home, or to be so infamously vicious that he cannot be decently protected in his own country, seldom recommends any man to the government of a French colony. Their officers are commonly skilful either in war or commerce, and are taught to have no expectation of honour or preferment, but from the justice and vigour of their administration.

Their great security is the friendship of the natives, and to this advantage they have certainly an indubitable right; because it is the consequence of their virtue. It is ridiculous to imagine, that the friendship of nations, whether civil or barbarous, can be gained and kept but by kind treatment; and surely they who intrude, uncalled, upon the country of a distant people, ought to consider the natives as worthy of common kindness, and content themselves to rob without insulting them. The French, as has been already observed, admit the Indians, by intermarriage, to an equality with themselves; and those nations, with which they have no such near intercourse, they gain over to their interest by honesty in their dealings. Our factors and traders, having no other purpose in view than immediate profit, use all the arts of an Eu-

ropean counting-house, to defraud the simple hunter of his furs.

These are some of the causes of our present weakness; our planters are always quarrelling with their governor, whom they consider as less to be trusted than the French; and our traders hourly alienate the Indians by their tricks and oppressions, and we continue every day to shew by new proofs, that no people can be great who have ceased to be virtuous.

MISCELLANEOUS ESSAYS.

OF

MEMOIRS OF THE COURT OF AUGUSTUS;

BY THOMAS BLACKWELL, J. U. D.

PRINCIPAL OF MARISHAL COLLEGE, IN THE UNIVERSITY OF ABERDEEN.

THE first effect which this book has upon the reader is that of disgusting him with the author's vanity. He endeavours to persuade the world, that here are some new treasures of literature spread before his eyes; that something is discovered, which to this happy day had been concealed in darkness; that by his diligence time had been robbed of some valuable monument which he was on the point of devouring; and that names and facts doomed to oblivion are now restored to fame.

How must the unlearned reader be surprised, when he shall be told that Mr. Blackwell has neither digged in the ruins of any demolished city, nor found out the way to the library of Fez: nor had a single book in his hands, that has not been in the possession of every man that was inclined to read it, for years and ages; and that his book relates to a people who above all others have furnished employment to the studious, and

amusements to the idle; who have scarcely left behind them a coin or a stone, which has not been examined and explained a thousand times, and whose dress, and food, and household stuff, it has been the pride of learning to understand.

A man need not fear to incur the imputation of vicious diffidence or affected humility, who should have forbore to promise many novelties, when he perceived such multitudes of writers possessed of the same materials, and intent upon the same purpose. Mr. Blackwell knows well the opinion of Horace, concerning those that open their undertakings with magnificent promises; and he knows likewise the dictates of common sense and common honesty, names of greater authority than that of Horace, who direct that no man should promise what he cannot perform.

I do not mean to declare that this volume has nothing new, or that the labours of those who have gone before our author, have made his performance an useless addition to the burden of literature. New works may be constructed with old materials, the disposition of the parts may shew contrivance, the ornaments interspersed may discover elegance.

It is not always without good effect that men of proper qualifications write in succession on the same subject, even when the latter add nothing to the information given by the former; for the same ideas may be delivered more intelligibly or more delightfully by one than by another, or with attractions that may lure minds of a different form. No writer pleases all, and every writer may please some.

But after all, to inherit is not to acquire; to decorate is not to make; and the man who had no-

thing to do but to read the ancient authors, who mention the Roman affairs, and reduce them to common-places, ought not to boast himself as a great benefactor to the studious world.

After a preface of boast, and a letter of flattery, in which he seems to imitate the address of Horace in his *vile potabis modicis Sabinum*—he opens his book with telling us, that the “Roman republic, “after the horrible proscription, was no more at “*bleeding Rome*. The regal power of her consuls, “the authority of her senate, and the majesty of “her people, were now trampled under foot; these “[for those] divine laws and hallowed customs, that “had been the essence of her constitution—were set “at nought, and her best friends were lying exposed “in their blood.”

These were surely very dismal times to those who suffered; but I know not why any one but a school-boy in his declamation should whine over the commonwealth of Rome, which grew great only by the misery of the rest of mankind. The Romans, like others, as soon as they grew rich grew corrupt, and, in their corruption, sold the lives and freedoms of themselves, and of one another.

“About this time Brutus had his patience put “to the *highest* trial: he had been married to Clodia; “but whether the family did not please him, or “whether he was dissatisfied with the lady’s behaviour during his absence, he soon entertained “thoughts of a separation. *This raised a good deal* “of talk, and the women of the Clodian family inveighed bitterly against Brutus—but he married “Portia, who was worthy of such a father as M.

“ Cato, and such a husband as M. Brutus. She had
 “ a soul capable of an *exalted passion*, and found a
 “ proper object to raise and give it a sanction; she
 “ did not only love but adored her husband; his
 “ worth, his truth, his every shining and heroic
 “ quality, made her gaze on him like a god, while
 “ the endearing returns of esteem and tenderness she
 “ met with, brought her joy, her pride, her every
 “ wish to center in her beloved Brutus.”

When the reader has been awakened by this rapturous preparation, he hears the whole story of Portia in the same luxuriant style, till she breathed out her last, a little before the *bloody proscription*, and “ Brutus complained heavily of his friends at Rome, as not having paid due attention to his *Lady* in the declining state of her health.”

He is a great lover of modern terms. His senators and their wives are *Gentlemen* and *Ladies*. In his review of Brutus's army, which *was under the command of gallant men, not braver officers, than true patriots*, he tells us, “ that Sextus the Questor was *Paymaster, Secretary at War, and Commissary General*, and that the *sacred discipline* of the Romans required the closest connexion, like that of father and son, to subsist between the General of an army and his Questor. *Cicero was General of the Cavalry*, and the next *general officer* was Flavius, *Master of the Artillery*, the elder Lentulus was *Admiral*, and the younger rode in the *Band of Volunteers*; under these the tribunes, *with many others too tedious to name.*” Lentulus, however, was but a subordinate officer; for we are informed afterwards, that the Romans had made Sextus Pompeius *Lord High Admiral in all the seas of their dominions.*

Among other affectations of this writer is a furious and unnecessary zeal for liberty, or rather for one form of government as preferable to another. This indeed might be suffered, because political institution is a subject in which men have always differed, and if they continue to obey their lawful governors, and attempt not to make innovations for the sake of their favourite schemes, they may differ for ever without any just reproach from one another. But who can bear the hardy champion who ventures nothing? who in full security undertakes the defence of the assassination of Cæsar, and declares his resolution *to speak plain*? Yet let not just sentiments be overlooked: he has justly observed, that the greater part of mankind will be naturally prejudiced against Brutus, for all feel the benefits of private friendship; but few can discern the advantages of a well-constituted government.

We know not whether some apology may not be necessary for the distance between the first account of this book and its continuation. The truth is, that this work not being forced upon our attention by much public applause or censure, was sometimes neglected, and sometimes forgotten; nor would it, perhaps, have been now resumed, but that we might avoid to disappoint our readers by an abrupt desertion of any subject.

It is not our design to criticise the facts of this history, but the style; not the veracity, but the address of the writer; for, an account of the ancient Romans, as it cannot nearly interest any present reader, and must be drawn from writings that have been long known, can owe its value only to the language in

which it is delivered, and the reflections with which it is accompanied. Dr. Blackwell, however, seems to have heated his imagination so as to be much affected with every event, and to believe that he can affect others. Enthusiasm is indeed sufficiently contagious; but I never found any of his readers much enamoured of the *glorious Pompey, the patriot approv'd*, or much incensed against the *lawless Cæsar*, whom this author probably stabs every day and night in his sleeping or waking dreams.

He is come too late into the world with his fury for freedom, with his Brutus and Cassius. We have all on this side of the Tweed long since settled our opinions: his zeal for Roman liberty and declamations against the violators of the republican constitution, only stand now in the reader's way, who wishes to proceed in the narrative without the interruption of epithets and exclamations. It is not easy to forbear laughter at a man so bold in fighting shadows, so busy in a dispute two thousand years past, and so zealous for the honour of a people who while they were poor robbed mankind, and as soon as they became rich, robbed one another. Of these robberies our author seems to have no very quick sense, except when they are committed by Cæsar's party, for every act is sanctified by the name of a patriot.

If this author's skill in ancient literature were less generally acknowledged, one might sometimes suspect that he had too frequently consulted the French writers. He tells us that Archelaus the Rhodian made a speech to Cassius, and *in so saying* dropt some tears, and that Cassius after the reduction of Rhodes

was covered with glory.—Deiotarus was a keen and happy spirit.—The ingrate Castor kept his court.

His great delight is to shew his universal acquaintance with terms of art, with words that every other polite writer has avoided and despised. When Pompey conquered the pirates, he destroyed fifteen hundred ships of the line.—The Xanthian parapets were tore down.—Brutus suspecting that his troops were plundering, commanded the trumpets to sound to their colours.—Most people understood the act of attainder passed by the senate.—The Numidian troopers were unlikely in their appearance.—The Numidians beat up one quarter after another.—Salvidienus resolved to pass his men over in boats of leather, and he gave orders for equipping a sufficient number of that sort of small craft.—Pompey had light agile frigates, and fought in a strait where the current and caverns occasion swirls and a roll.—A sharp out-look was kept by the admiral.—It is a run of about fifty Roman miles.—Brutus broke Lipella in the sight of the army.—Mark Antony garbled the senate.—He was a brave man, well qualified for a commodore.

In his choice of phrases he frequently uses words with great solemnity, which every other mouth and pen has appropriated to jocularly and levity! The Rhodians gave up the contest, and in poor plight fled back to Rhodes.—Boys and girls were easily kid-napped.—Deiotarus was a mighty believer of augury.—Deiotarus destroyed his ungracious progeny.—The regularity of the Romans was their mortal aversion.—They desired the consuls to curb such heinous doings.—He had such a shrewd invention,

that no side of a question came amiss to him.---Brutus found his mistress a coquettish creature.

He sometimes, with most unlucky dexterity, mixes the grand and the burlesque together; *the violation of faith, Sir, says Cassius, lies at the door of the Rhodians by reiterated acts of perfidy.* The iron grate fell down, crushed those under it to death, and caught the rest as in a trap. When the Xanthians heard the military shout, and saw the flame mount, they concluded there would be no mercy. It was now about sun-set, and they had been at hot work since noon.

He has often words or phrases with which our language has hitherto had no knowledge. One was a heart-friend to the republic. A deed was expedited. The Numidians begun to reel, and were in hazard of falling into confusion. The tutor embraced his pupil close in his arms. Four hundred women were taxed, who have no doubt been the wives of the best Roman citizens. Men not born to action are inconsequential in government—collectitious troops. The foot, by their violent attack, began the fatal break in the Pharsaliac field. He and his brother, with a politic common to other countries, had taken opposite sides.

His epithets are of the gaudy or hyperbolical kind. The glorious news. Eager hopes and dismal fears. Bleeding Rome; divine laws and hallowed customs; merciless war; intense anxiety.

Sometimes the reader is suddenly ravished with a sonorous sentence, of which, when the noise is past, the meaning does not long remain. When Brutus set his legions to fill a moat, instead of heavy dragging and slow toil, they set about it with huzzas and

racing, as if they had been striving at the Olympic games. They hurled impetuous down the huge trees and stones, and with shouts forced them into the water; so that the work, expected to continue half the campaign, was with rapid toil completed in a few days. Brutus's soldiers fell to the gate with resistless fury, it gave way at last with hideous crash. ---This great and good man, doing his duty to his country, received a mortal wound, and glorious fell in the cause of Rome; may his memory be ever dear to all lovers of liberty, learning and humanity!---This promise ought ever to embalm his memory.---The queen of nations was torn by no foreign invader. Rome fell a sacrifice to her own sons, and was ravaged by her unnatural offspring: all the great men of the state, all the good, all the holy, were openly murdered by the wickedest and worst.---Little islands cover the harbour of Brindisi, and form the narrow outlet from the numerous creeks that compose its capacious port. --At the appearance of Brutus and Cassius a shout of joy rent the heavens from the surrounding multitudes.

. Such are the flowers which may be gathered by every hand in every part of this garden of eloquence. But having thus freely mentioned our Author's faults, it remains that we acknowledge his merit; and confess that this book is the work of a man of letters, that it is full of events displayed with accuracy, and related with vivacity; and though it is sufficiently defective to crush the vanity of its Author, it is sufficiently entertaining to invite readers.

REVIEW

OF

“FOUR LETTERS FROM SIR ISAAC NEWTON TO DR. BENTLEY,

CONTAINING

SOME ARGUMENTS IN PROOF OF A DEITY.”

IT will certainly be required, that notice should be taken of a book, however small, written on such a subject, by such an author. Yet I know not whether these Letters will be very satisfactory; for they are answers to inquiries not published; and therefore, though they contain many positions of great importance, are, in some parts, imperfect and obscure, by their reference to Dr. Bentley's Letters.

Sir Isaac declares, that what he has done is *due to nothing but industry and patient thought*; and indeed long consideration is so necessary in such abstruse inquiries, that it is always dangerous to publish the productions of great men, which are not known to have been designed for the press, and of which it is uncertain, whether much patience and thought have been bestowed upon them. The principal question of these Letters gives occasion to observe how even the mind of Newton gains ground gradually upon darkness.

“As to your first query,” says he, “it seems to me, that if the matter of our sun and planets, and all the matter of the universe, were evenly scattered throughout all the heavens, and every particle had an innate gravity towards all the rest, and the whole space throughout which this matter was scattered, was but finite; the matter on the outside of this space would by its gravity tend towards all the matter on the inside, and by consequence fall down into the middle of the whole space, and there compose one great spherical mass. But if the matter was evenly disposed throughout an infinite space, it could never convene into one mass, but some of it would convene into one mass, and some into another, so as to make an infinite number of great masses, scattered at great distances from one to another throughout all that infinite space. And thus might the sun and fixed stars be formed, supposing the matter were of a lucid nature. But how the matter should divide itself into two sorts, and that part of it which is fit to compose a shining body, should fall down into one mass and make a sun, and the rest, which is fit to compose an opaque body, should coalesce, not into one great body, like the shining matter, but into many little ones; or if the sun at first were an opaque body like the planets, or the planets lucid bodies like the sun, how he alone should be changed into a shining body, whilst all they continue opaque, or all they be changed into opaque ones, whilst he remains unchanged, I do not think more explicable by mere natural causes, but am forced to ascribe it to the counsel and contrivance of a voluntary agent.”

The hypothesis of matter evenly disposed through infinite space, seems to labour with such difficulties, as makes it almost a contradictory supposition, or a supposition destructive of itself.

Matter evenly disposed through infinite space, is either created or eternal; if it was created; it infers a Creator: if it was eternal, it had been from eternity *evenly spread through infinite space*; or it had been once coalesced in masses, and afterwards been diffused. Whatever state was first, must have been from eternity, and what had been from eternity could not be changed, but by a cause beginning to act as it had never acted before, that is, by the voluntary act of some external power. If matter infinitely and evenly diffused was a moment without coalition, it could never coalesce at all by its own power. If matter originally tended to coalesce, it could never be evenly diffused through infinite space. Matter being supposed eternal, there never was a time when it could be diffused before its conglobation, or conglobated before its diffusion.

This Sir Isaac seems by degrees to have understood: for he says, in his second Letter, “ The reason
 “ why matter evenly scattered through a finite space
 “ would convene in the midst, you conceive the same
 “ with me; but that there should be a central par-
 “ ticle, so accurately placed in the middle, as to be
 “ always equally attracted on all sides, and thereby
 “ continue without motion, seems to me a supposition
 “ fully as hard as to make the sharpest needle stand
 “ upright upon its point on a looking-glass. For if
 “ the very mathematical center of the central particle
 “ be not accurately in the very mathematical center
 “ of the attractive power of the whole mass, the par-

“ ticle will not be attracted equally on all sides. And
“ much harder is it to suppose all the particles in an
“ infinite space should be so accurately poised one
“ among another, as to stand still in a perfect equili-
“ brium. For I reckon this as hard as to make not
“ one needle only, but an infinite number of them (so
“ many as there are particles in an infinite space) stand
“ accurately poised upon their points. Yet I grant it
“ possible, at least by a divine power; and if they
“ were once to be placed, I agree with you that they
“ would continue in that posture, without motion for
“ ever, unless put into new motion by the same power.
“ When therefore I said, that matter evenly spread
“ through all space, would convene by its gravity
“ into one or more great masses, I understand it of
“ matter not resting in an accurate poise.”

Let not it be thought irreverence to this great name, if I observe, that by *matter evenly spread* through infinite space, he now finds it necessary to mean *matter not evenly spread*. *Matter not evenly spread* will indeed convene, but it will convene as soon as it exists. And, in my opinion, this puzzling question about matter is only how *that could be that never could have been*, or what a man thinks on when he thinks of nothing.

Turn matter on all sides, make it eternal, or of late production, finite or infinite, there can be no regular system produced but by a voluntary and meaning agent. This the great Newton always asserted, and this he asserts in the third letter; but proves in another manner, in a manner perhaps more happy and conclusive.

“ The hypothesis of deriving the frame of the
“ world by mechanical principles from matter evenly
“ spread through the heavens being inconsistent with
“ my system, I had considered it very little before
“ your letter put me upon it, and therefore trouble
“ you with a line or two more about it, if this comes
“ not too late for your use.

“ In my former, I represented that the diurnal ro-
“ tations of the planets could not be derived from
“ gravity, but required a divine arm to impress them.
“ And though gravity might give the planets a mo-
“ tion of descent towards the sun, either directly, or
“ with some little obliquity, yet the transverse mo-
“ tions by which they revolve in their several orbs,
“ required the divine arm to impress them according
“ to the tangents of their orbs. I would now add,
“ that the hypothesis of matter’s being at first evenly
“ spread through the heavens, is, in my opinion, in-
“ consistent with the hypothesis of innate gravity,
“ without a supernatural power to reconcile them, and
“ therefore it infers a Deity. For if there be innate
“ gravity, it is impossible now for the matter of the
“ earth, and all the planets and stars, to fly up from
“ them, and become evenly spread throughout all the
“ heavens, without a supernatural power; and cer-
“ tainly that which can never be hereafter without a
“ supernatural power, could never be heretofore with-
“ out the same power.”

REVIEW

OF

“ A JOURNAL OF EIGHT DAYS JOURNEY,

FROM

PORTSMOUTH TO KINGSTON UPON THAMES, THROUGH
SOUTHAMPTON, WILTSHIRE, &c.

WITH

Miscellaneous Thoughts, Moral and Religious;

IN SIXTY-FOUR LETTERS:

ADDRESSED TO TWO LADIES OF THE PARTIE.

TO WHICH IS ADDED,

AN ESSAY ON TEA, considered as pernicious to Health, obstructing Industry, and impoverishing the Nation; with an Account of its Growth, and great Consumption in these Kingdoms; with several political Reflections; and Thoughts on Public Love: in Thirty-two Letters to Two Ladies.

BY MR. H*****.’’

[From the Literary Magazine, Vol. II. No. xiii. 1757.]

OUR readers may perhaps remember, that we gave them a short account of this book, with a letter extracted from it, in November 1756. The author then sent us an injunction to forbear his work till a second edition should appear: this prohibition was rather too magisterial; for an author is no longer

the sole master of a book which he has given to the public; yet he has been punctually obeyed; we had no desire to offend him, and if his character may be estimated by his book, he is a man whose failings may well be pardoned for his virtues.

The second edition is now sent into the world, *corrected and enlarged*, and yielded up by the author to the attacks of criticism. But he shall find in us no malignity of censure. We wish indeed, that among other corrections, he had submitted his pages to the inspection of a grammarian, that the elegancies of one line might not have been disgraced by the improprieties of another; but with us to mean well is a degree of merit which overbalances much greater errors than impurity of style.

We have already given in our collections one of the letters, in which Mr. Hanway endeavours to show, that the consumption of Tea is injurious to the interest of our country. We shall now endeavour to follow him regularly through all his observations on this modern luxury; but it can scarcely be candid, not to make a previous declaration, that he is to expect little justice from the author of this extract, a hardened and shameless Tea-drinker, who has for twenty years diluted his meals with only the infusion of this fascinating plant, whose kettle has scarcely time to cool, who with Tea amuses the evening, with Tea solaces the midnight, and with Tea welcomes the morning.

He begins by refuting a popular notion, that Bohea and Green Tea are leaves of the same shrub, gathered at different times of the year. He is of opinion, that they are produced by different shrubs. The leaves

of Tea are gathered in dry weather ; then dried and curled over the fire in copper pans. The Chinese use little Green Tea, imagining that it hinders digestion and excites fevers. How it should have either effect is not easily discovered ; and if we consider the innumerable prejudices which prevail concerning our own plants, we shall very little regard these opinions of the Chinese vulgar, which experience does not confirm.

When the Chinese drink Tea, they infuse it slightly, and extract only the more volatile parts ; but though this seems to require great quantities at a time, yet the author believes, perhaps only because he has an inclination to believe it, that the English and Dutch use more than all the inhabitants of that extensive empire. The Chinese drink it sometimes with acids, seldom with sugar ; and this practice our author, who has no intention to find any thing right at home, recommends to his countrymen.

The history of the rise and progress of Tea-drinking is truly curious. Tea was first imported from Holland by the earls of Arlington and Ossory, in 1666 ; from their ladies the women of quality learned its use. Its price was then three pounds a pound, and continued the same to 1707. In 1715, we began to use Green Tea, and the practice of drinking it descended to the lower class of the people. In 1720, the French began to send it hither by a clandestine commerce. From 1717 to 1726, we imported annually seven hundred thousand pounds. From 1732 to 1742, a million and two hundred thousand pounds were every year brought to London ; in some years

afterwards three millions; and in 1755, near four millions of pounds, or two thousand tons, in which we are not to reckon that which is surreptitiously introduced, which perhaps is nearly as much. Such quantities are indeed sufficient to alarm us; it is at least worth inquiry, to know what are the qualities of such a plant, and what the consequences of such a trade.

He then proceeds to enumerate the mischiefs of Tea, and seems willing to charge upon it every mischief that he can find. He begins, however, by questioning the virtues ascribed to it, and denies that the crews of the Chinese ships are preserved in their voyage homewards from the scurvy by Tea. About this report I have made some inquiry, and though I cannot find that these crews are wholly exempt from scorbutic maladies, they seem to suffer them less than other mariners in any course of equal length. This I ascribe to the Tea, not as possessing any medicinal qualities, but as tempting them to drink more water, to dilute their salt food more copiously, and perhaps to forbear punch, or other strong liquors.

He then proceeds in the pathetic strain, to tell the ladies how, by drinking Tea, they injure their health, and, what is yet more dear, their beauty.

“ To what can we ascribe the numerous complaints which prevail? How many *sweet creatures* of your sex languish with a *weak digestion*, *low spirits*, *lassitudes*, *melancholy*, and twenty disorders, which in spite of the *faculty* have yet no names, except the general one of *nervous complaints*? Let them change their diet, and among other articles, leave off drinking Tea, it is more

“ than probable the greatest part of them will be re-
 “ stored to health.”

“ Hot water is also very hurtful to the teeth. The
 “ Chinese do not drink their Tea so hot as we do, and
 “ yet they have bad teeth. This cannot be ascribed
 “ entirely to *sugar*, for they use very little, as already
 “ observed : but we all know that *hot* or *cold* things
 “ which *pain* the teeth, destroy them also. If we
 “ drank less Tea, and used gentle *acids* for the gums
 “ and teeth, particularly *sour oranges*, though we had
 “ a less number of French *dentists*, I fancy this *essential*
 “ part of beauty would be much *better* preserved.

“ The women in the United Province, who *sip*
 “ Tea from morning till night, are also as remarkable
 “ for *bad teeth*. They also look pallid, and many
 “ are troubled with certain feminine disorders arising
 “ from a relaxed habit. The Portuguese ladies, on
 “ the other hand, entertain with *sweetmeats*, and yet
 “ they have very *good teeth* : but their food in general
 “ is more of the farinaceous and vegetable kind than
 “ ours. They also *drink cold water* instead of *sipping*
 “ *hot*, and never taste any fermented liquors ; for
 “ these reasons the use of *sugar* does not seem to be
 “ at all pernicious to them.”

“ Men seem to have lost their stature and come-
 “ liness, and women their beauty. I am not *young*,
 “ but methinks there is not quite so much *beauty*
 “ in this land as there was. Your very *chamber-*
 “ *maids* have lost their bloom, I suppose by *sipping*
 “ Tea. Even the agitations of the passions at *cards*
 “ are not so great enemies to female charms. What
 “ Shakespeare ascribes to the concealment of love, is

“ *in this age* more frequently occasioned by the use of “ *Tea.*”

To raise the fright still higher, he quotes an account of a pig's tail scalded with Tea, on which however he does not much insist.

Of these dreadful effects, some are perhaps imaginary, and some may have another cause. That there is less beauty in the present race of females, than in those who entered the world with us, all of us are inclined to think on whom beauty has ceased to smile; but our fathers and grandfathers made the same complaint before us; and our posterity will still find beauties irresistibly powerful.

That the diseases commonly called nervous, tremors, fits, habitual depression, and all the maladies which proceed from laxity and debility, are more frequent than in any former time, is, I believe, true, however deplorable. But this new race of evils will not be expelled by the prohibition of Tea. This general languor is the effect of general luxury, of general idleness. If it be most to be found among Tea-drinkers, the reason is, that Tea is one of the stated amusements of the idle and luxurious. The whole mode of life is changed; every kind of voluntary labour, every exercise that strengthened the nerves, and hardened the muscles, is fallen into disuse. The inhabitants are crowded together in populous cities, so that no occasion of life requires much motion; every one is near to all that he wants; and the rich and delicate seldom pass from one street to another, but in carriages of pleasure. Yet we eat and drink, or strive to eat and drink, like the hunters and huntresses, the

farmers and the housewives of the former generation ; and they that pass ten hours in bed, and eight at cards, and the greater part of the other six at the table, are taught to impute to Tea all the diseases which a life unnatural in all its parts may chance to bring upon them.

Tea, among the greater part of those who use it most, is drunk in no great quantity. As it neither exhilarates the heart, nor stimulates the palate, it is commonly an entertainment merely nominal, a pretence for assembling to prattle, for interrupting business, or diversifying idleness. They who drink one cup, and who drink twenty, are equally punctual in preparing or partaking it ; and indeed there are few but discover by their indifference about it, that they are brought together not by the Tea, but the Teatable. Three cups make the common quantity, so slightly impregnated, that perhaps they might be tinged with the Athenian *cicuta*, and produce less effects than these Letters charge upon Tea.

Our author proceeds to shew yet other bad qualities of this hated leaf.

“ Green Tea, when made strong even by infusion,
“ is an *emetic* ; nay, I am told it is used as such in
“ China ; a decoction of it certainly performs this
“ operation ; yet by long use it is drunk by many
“ without such an effect. The infusion also, when
“ it is made strong, and stands long to draw the gros-
“ ser particles, will *convulse* the bowels : even in the
“ manner *commonly* used, it has this effect on some
“ constitutions, as I have already remarked to you
“ from my own experience.

“ You see I confess my *weakness* without reserve ;
 “ but those who are very fond of Tea, if their di-
 “ ggestion is weak, and they find themselves disor-
 “ dered, they generally ascribe it to any *cause* except
 “ the *true* one. I am aware that the effect just
 “ mentioned is imputed to the hot water ; let it be
 “ so, and my argument is still good : but who pre-
 “ tends to say it is not *partly* owing to particular
 “ kinds of Tea? perhaps such as partake of *copperas*,
 “ which there is cause to apprehend is sometimes
 “ the case : if we judge from the manner in which it
 “ is said to be cured, together with its ordinary ef-
 “ fects, there is some foundation for this opinion.
 “ Put a drop of strong Tea, either *Green* or *Bohea*,
 “ but chiefly the former, on the blade of a knife,
 “ though it is not corrosive in the same manner as
 “ vitriol, yet there appears to be a corrosive quality in
 “ it, very different from that of fruit which stains the
 “ knife.”

He afterwards quotes Paulli to prove that Tea is
 a *desiccative*, and ought not to be used after the fortieth
 year. I have then long exceeded the limits of per-
 mission, but I comfort myself, that all the enemies of
 Tea cannot be in the right. If Tea be desiccative,
 according to Paulli, it cannot weaken the fibres, as
 our author imagines ; if it be *emetic*, it must con-
 stringe the stomach, rather than relax it.

The formidable quality of tinging the knife, it has
 in common with acorns, the bark and leaves of oak,
 and every astringent bark or leaf: the copperas which
 is given to the Tea, is really in the knife. Ink may
 be made of any ferrugineous matter and astringent.

vegetable, as it is generally made of galls and copperas.

From Tea the writer digresses to spirituous liquors, about which he will have no controversy with the Literary Magazine; we shall therefore insert almost his whole letter, and add to it one testimony, that the mischiefs arising on every side from this compendious mode of drunkenness, are enormous and insupportable; equally to be found among the great and the mean; filling palaces with disquiet and distraction; harder to be borne as it cannot be mentioned; and overwhelming multitudes with incurable diseases and unpitied poverty.

“ Though *Tea* and *Gin* have spread their baneful
“ influence over this island and his Majesty’s other
“ dominions, yet you may be well assured, that the
“ Governors of the Foundling Hospital will exert
“ their utmost skill and vigilance, to prevent the
“ children under their care from being poisoned, or
“ enervated, by one or the other. This, however,
“ is not the case of *workhouses*: it is well known,
“ to the shame of those who are charged with the care
“ of them, that *gin* has been too often permitted to
“ enter their gates; and the debauched appetites of
“ the people who inhabit these houses, has been urged
“ as a reason for it.

“ *Desperate* diseases require *desperate* remedies: if
“ laws are rigidly executed against murderers in the
“ highway, those who provide a draught of gin, which
“ we see is *murderous*, ought not to be *countenanced*.
“ I am now informed, that in certain hospitals, where

“ the number of the *sick* used to be about 5,600 in
“ fourteen years,

“ From 1704 to 1718, they increased to 8,189 ;

“ From 1718 to 1734, still augmented to 12,710 ;

“ And from 1734 to 1749, *multiplied* to 38,147.

“ What a dreadful *spectre* does this exhibit ! nor
“ must we wonder, when satisfactory evidence was
“ given before the great council of the nation, that
“ near eight millions of gallons of distilled spirits, at
“ the standard it is commonly reduced to for drink-
“ ing, was actually consumed annually in drams !
“ the shocking difference in the numbers of the *sick*,
“ and we may presume of the *dead* also, was supposed
“ to keep pace with *gin* : and the most ingenious and
“ unprejudiced physicians ascribed it to this cause.
“ What is to be done under these melancholy cir-
“ cumstances ? shall we still countenance the *distillery*,
“ for the sake of the *revenue* ; out of tenderness to the
“ *few* who will suffer by its being abolished ; for fear
“ of the madness of the people ; or that foreigners will
“ run it in upon us ? There can be no *evil* so great as
“ that we now suffer, except the making the same
“ consumption, and paying for it to foreigners in
“ *money*, which I hope never will be the case.

“ As to the *revenue*, it certainly may be replaced
“ by taxes upon the *necessaries* of life, even upon
“ the *bread we eat*, or in other words, upon the
“ *land*, which is the great source of supply to the
“ *public* and to *individuals*. Nor can I persuade
“ myself, but that the people may be *weaned* from

“ the habit of poisoning themselves. The difficulty
“ of *smuggling* a bulky *liquid*, joined to the severity
“ which *ought* to be exercised towards smugglers,
“ whose *illegal* commerce is of so *infernal* a nature,
“ must in time produce the effect desired. Spi-
“ rituous liquors being abolished, instead of having
“ the most undisciplined and abandoned poor, we
“ might soon boast a race of men, temperate, religi-
“ ous, and industrious even to a *proverb*. We should
“ soon see the *ponderous* burden of the *poor's rate* de-
“ crease, and the *beauty* and *strength* of the land reju-
“ venate. Schools, workhouses, and hospitals, might
“ then be sufficient to clear our streets of distress and
“ misery, which never will be the case whilst the love
“ of poison prevails, and the means of ruin is sold
“ in above one thousand houses in the city of London,
“ two thousand two hundred in Westminster, and one
“ thousand nine hundred and thirty in Holborn and
“ St. Giles's.

“ But if other uses still demand *liquid fire*, I would
“ really propose, that it should be sold only in quart
“ bottles, sealed up with the King's seal, with a very
“ high duty, and none sold without being mixed with
“ a *strong emetic*.

“ Many become objects of charity by their *intem-*
“ *perance*, and this excludes others who are such by
“ the unavoidable accidents of life, or who cannot
“ by any means support themselves. Hence it ap-
“ pears, that the introducing *new habits* of life is the
“ most substantial charity; and that the regulation of
“ charity-schools, hospitals, and workhouses, not
“ the augmentation of their number, can make

“ them answer the wise ends for which they were instituted.

“ The children of beggars should be also taken from them, and bred up to labour, as children of the public. Thus the *distressed* might be relieved, at a sixth part of the present expence; the idle be compelled to *work* or *starve*; and the *mad* be sent to Bedlam. We should not see human nature disgraced by the aged, the maimed, the sickly, and young children begging their bread; nor would compassion be abused by those who have reduced it to an *art* to catch the unwary. Nothing is wanting but common sense and *honesty* in the execution of *laws*.

“ To prevent such abuse in the *streets*, seems more practicable than to abolish *bad habits within doors*, where *greater* numbers perish. We see in many familiar instances the fatal effects of example. The careless spending of time among *servants*, who are charged with the care of infants, is often fatal: the nurse frequently destroys the child! the poor infant being left neglected, expires whilst she is sipping her Tea! This may appear to you as a *rank prejudice* or *jest*; but I am assured, from the most *indubitable* evidence, that many very extraordinary cases of this kind have *really* happened among those whose *duty* does not permit of such kind of habits.

“ It is partly from such causes, that nurses of the children of the *public* often *forget* themselves, and become *impatient* when infants cry: the next step to this, is using extraordinary means to quiet

“ them. I have already mentioned the term *killing*
“ *nurse*, as known in some workhouses: *Venice treacle*,
“ *poppy water*, and *Godfrey's Cordial*, have been the
“ *kind* instruments of lulling the child to his *everlasting*
“ rest. If these *pious* women could send up an eja-
“ culation when the child expired, all was *well*, and
“ no questions *asked* by the *superiors*. An ingenious
“ friend of mine informs me, that this has been so
“ often the case, in some workhouses, that *Venice*
“ *treacle* has acquired the appellation of *the Lord*
“ *have mercy upon me*, in allusion to the nurses' *hack-*
“ *neyed* expression of *pretended* grief when infants
“ expire! *Farewel!*”

I know not upon what observation Mr. Hanway founds his confidence in the Governors of the Foundling Hospital, men of whom I have not any knowledge, but whom I entreat to consider a little the minds as well as bodies of the children. I am inclined to believe Irreligion equally pernicious with Gin and Tea, and therefore think it not unseasonable to mention, that when a few months ago I wandered through the Hospital, I found not a child that seemed to have heard of his creed, or the commandments. To breed up children in this manner, is to rescue them from an early grave, that they may find employment for the gibbet: from dying in innocence, that they may perish by their crimes.

Having considered the effects of Tea upon the health of the drinker, which, I think, he has aggravated in the vehemence of his zeal, and which, after soliciting them by this watery luxury, year after year, I have not yet felt; he proceeds to examine how it may be shewn to affect our interest;

and first calculates the national loss by the time spent in drinking Tea. I have no desire to appear captious, and shall therefore readily admit, that Tea is a liquor not proper for the lower classes of the people, as it supplies no strength to labour, or relief to disease, but gratifies the taste without nourishing the body. It is a barren superfluity, to which those who can hardly procure what nature requires, cannot prudently habituate themselves. Its proper use is to amuse the idle, and relax the studious, and dilute the full meals of those who cannot use exercise, and will not use abstinence. That time is lost in this insipid entertainment, cannot be denied; many trifle away at the Tea-table those moments which would be better spent; but that any national detriment can be inferred from this waste of time, does not evidently appear, because I know not that any work remains undone for want of hands. Our manufactures seem to be limited, not by the possibility of work, but by the possibility of sale.

His next argument is more clear. He affirms, that one hundred and fifty thousand pounds in silver are paid to the Chinese annually, for three millions of pounds of Tea, and that for two millions more brought clandestinely from the neighbouring coasts, we pay, at twenty pence a pound, one hundred sixty-six thousand six hundred and sixty-six pounds. The author justly conceives, that this computation will waken us; for, says he, "The loss of health, the loss of time, the injury of morals, are not very sensibly felt by some, who are alarmed when you talk of the loss of money." But he excuses the East India Company, as men not obliged to be po-

litical arithmeticians, or to inquire so much what the nation loses, as how themselves may grow rich. It is certain, that they who drink Tea have no right to complain of those that import it; but if Mr. Hanway's computation be just, the importation and the use of it ought at once to be stopped by a penal law.

The author allows one slight argument in favour of Tea, which, in my opinion, might be with far greater justice urged both against that and many other parts of our naval trade. "The Tea trade employs (he tells us) six ships, and five or six hundred seamen, sent annually to China. It likewise brings in a revenue of three hundred and sixty thousand pounds, which, as a tax on luxury, may be considered as of great utility to the state." The utility of this tax I cannot find; a tax on luxury is no better than another tax, unless it hinders luxury, which cannot be said of the impost upon Tea, while it is thus used by the great and the mean, the rich and the poor. The truth is, that by the loss of one hundred and fifty thousand pounds, we procure the means of shifting three hundred and sixty thousand at best, only from one hand to another; but perhaps sometimes into hands by which it is not very honestly employed. Of the five or six hundred seamen sent to China, I am told that sometimes half, commonly a third part, perish in the voyage; so that, instead of setting this navigation against the inconveniencies already alleged, we may add to them, the yearly loss of two hundred men in the prime of life; and reckon, that the trade of China has destroyed ten thousand men since the beginning of this century.

If Tea be thus pernicious, if it impoverishes our country, if it raises temptation, and gives opportunity to illicit commerce, which I have always looked on as one of the strongest evidences of the inefficacy of our law, the weakness of our government, and the corruption of our people, let us at once resolve to prohibit it for ever.

“ If the *question* was, how to promote industry
“ most *advantageously*, in lieu of our Tea-trade, sup-
“ posing every branch of our commerce to be already
“ fully supplied with men and money? If a *quarter*
“ the sum now spent in Tea, were laid out annually
“ in plantations, in making public gardens, in
“ paving and widening streets, in making *roads*, in
“ rendering *rivers* navigable, erecting *palaces*, build-
“ ing *bridges*, or neat and convenient *houses*, where
“ are now only *huts*; *draining* lands, or rendering
“ those which are now *barren* of some *use*; should we
“ not be gainers, and provide more for health, plea-
“ sure, and long life, compared with the consequences
“ of the Tea-trade?”

Our riches would be much better employed to these purposes; but if this project does not please, let us first resolve to save our money, and we shall afterwards very easily find ways to spend it.

R E V I E W

OF

“ AN ESSAY

ON THE

WRITINGS AND GENIUS OF POPE.”

THIS is a very curious and entertaining miscellany of critical remarks and literary history. Though the book promises nothing but observations on the writings of Pope, yet no opportunity is neglected of introducing the character of any other writer, or the mention of any performance or event in which learning is interested. From Pope, however, he always takes his hint, and to Pope he returns again from his digressions. The facts which he mentions, though they are seldom anecdotes in a rigorous sense, are often such as are very little known, and such as will delight more readers than naked criticism.

As he examines the works of this great poet in an order nearly chronological, he necessarily begins with his pastorals, which considered as representations of any kind of life, he very justly censures; for there is in them a mixture of Grecian and English, of ancient and modern, images. Windsor is coupled with Hybla, and Thames with Pactolus. He then compares some passages which Pope has imitated or translated

with the imitation or version, and gives the preference to the originals, perhaps not always upon convincing arguments.

Theocritus makes his lover wish to be a bee, that he might creep among the leayes that form the chaplet of his mistress. Pope's enamoured swain longs to be made the captive bird that sings in his fair one's bower, that she might listen to his songs, and reward them with her kisses. The critic prefers the image of Theocritus as more wild, more delicate, and more uncommon.

It is natural for a lover to wish that he might be any thing that could come near to his lady. But we more naturally desire to be that which she fondles and caresses, than that which she would avoid, at least would neglect. The superior delicacy of Theocritus I cannot discover, nor can indeed find, that either in the one or the other image there is any want of delicacy. Which of the two images was less common in the time of the poet who used it, for on that consideration the merit of novelty depends, I think it is now out of any critic's power to decide.

He remarks, I am afraid with too much justice, that there is not a single new thought in the pastorals; and with equal reason declares, that their chief beauty consists in their correct and musical versification, which has so influenced the English ear, as to render every moderate rhymer harmonious.

In his examination of the Messiah, he justly observes some deviations from the inspired author, which weaken the imagery, and dispirit the expression.

On Windsor Forest, he declares, I think without proof, that descriptive poetry was by no means the

excellence of Pope; he draws this inference from the few images introduced in this poem, which would not equally belong to any other place. He must inquire whether Windsor Forest has in reality any thing peculiar.

The Stag-chase is not, he says, so full, so animated, and so circumstantiated as Somerville's. Barely to say, that one performance is not so good as another, is to criticise with little exactness. But Pope has directed that we should in every work regard the author's end. The Stag-chase is the main subject of Somerville, and might therefore be properly dilated into all its circumstances; in Pope it is only incidental, and was to be dispatched in a few lines.

He makes a just observation, that "the description of the external beauties of nature is usually the first effort of a young genius, before he hath studied nature and passions. Some of Milton's most early as well as most exquisite pieces are his *Lycidas*, *l'Allegro*, and *Il Penseroso*, if we may except his ode on the Nativity of CHRIST, which is indeed prior in order of time, and in which a penetrating critic might have observed the seeds of that boundless imagination which was one day to produce the *Paradise Lost*."

Mentioning Thomson and other descriptive poets, he remarks, that writers fail in their copies for want of acquaintance with originals, and justly ridicules those who think they can form just ideas of valleys, mountains, and rivers, in a garret of the Strand. For this reason I cannot regret with this author, that Pope laid aside his design of writing American pastorals; for as he must have painted scenes which he

never saw, and manners which he never knew, his performance, though it might have been a pleasing amusement of fancy, would have exhibited no representation of nature or of life.

After the pastorals, the critic considers the lyric poetry of Pope, and dwells longest on the ode of St. Cecilia's day, which he, like the rest of mankind, places next to that of Dryden, and not much below it. He remarks after Mr. Spence, that the first stanza is a perfect concert. The second he thinks a little flat; he justly commends the fourth, but without notice of the best line in that stanza or in the poem :

Transported demigods stood round,
And men grew heroes at the sound.

In the latter part of the ode he objects to the stanza of triumph :

Thus song could reveal, &c.

as written in a measure ridiculous and burlesque, and justifies his answer by observing that Addison uses the same numbers in the scene of Rosamond, between Grideline and Sir Trusty :

How unhappy is he, &c.

That the measure is the same in both passages must be confessed, and both poets perhaps chose their numbers properly; for they both meant to express a kind of airy hilarity. The two passions of merriment and exultation are undoubtedly different; they are as different as a gambol and a triumph, but each is a species of joy; and poetical measures have not in any language been so far refined as to provide for the subdivisions of passion. They can only be adapted to

general purposes; but the particular and minuter propriety must be sought only in the sentiment and language. Thus the numbers are the same in Colin's complaint, and in the ballad of Darby and Joan, though in one sadness is represented, and in the other tranquillity; so the measure is the same of Pope's Unfortunate Lady and the Praise of Voiture.

He observes very justly, that the odes both of Dryden and Pope conclude unsuitably and unnaturally with epigram.

He then spends a page upon Mr. Handel's music to Dryden's ode, and speaks of him with that regard which he has generally obtained among the lovers of sound. He finds something amiss in the air "With ravished ears," but has overlooked or forgotten the grossest fault in that composition, which is that in this line :

Revenge, revenge, Timotheus cries.

He has laid much stress upon the two latter words, which are merely words of connexion, and ought in music to be considered as parenthetical.

From this ode is struck out a digression on the nature of odes, and the comparative excellence of the ancients and moderns. He mentions the chorus which Pope wrote for the duke of Buckingham; and thence takes occasion to treat of the chorus of the ancients. He then comes to another ode of "The dying Christian to his Soul," in which finding an apparent imitation of Flatman, he falls into a pleasing and learned speculation on the resembling passages to be found in different poets:

He mentions with great regard Pope's ode on Solitude, written when he was but twelve years old, but

omits to mention the poem on Silence, composed, I think, as early, with much greater elegance of diction, music of numbers, extent of observation, and force of thought. If he had happened to think on Baillet's chapter of *Enfans celebres*, he might have made on this occasion a very entertaining dissertation on early excellence.

He comes next to the *Essay on Criticism*, the stupendous performance of a youth not yet twenty years old; and after having detailed the felicities of condition, to which he imagines Pope to have owed his wonderful prematurity of mind, he tells us that he is well informed this essay was first written in prose. There is nothing improbable in the report, nothing indeed but what is more likely than the contrary; yet I cannot forbear to hint to this writer and all others, the danger and weakness of trusting too readily to information. Nothing but experience could evince the frequency of false information, or enable any man to conceive that so many groundless reports should be propagated as every man of eminence may hear of himself. Some men relate what they think as what they know; some men of confused memories and habitual inaccuracy ascribe to one man what belongs to another; and some talk on without thought or care. A few men are sufficient to broach falsehoods, which are afterwards innocently diffused by successive relaters.

He proceeds on examining passage after passage of this essay; but we must pass over all these criticisms to which we have not something to add or to object, or where this author does not differ from the general voice of mankind. We cannot agree with him in his censure of the comparison of a student advancing in

science with a traveller passing the Alps, which is perhaps the best simile in our language; that in which the most exact resemblance is traced between things in appearance utterly unrelated to each other. That the last line conveys no new *idea*, is not true; it makes particular what was before general. Whether the description which he adds from another author be, as he says, more full and striking than that of Pope, is not to be inquired. Pope's description is relative, and can admit no greater length than is usually allowed to a simile, nor any other particulars than such as form the correspondence.

Unvaried rhymes, says this writer, highly disgust readers of a good ear. It is surely not the ear but the mind that is offended. The fault arising from the use of common rhymes is, that by reading the past line the second may be guessed, and half the composition loses the grace of novelty.

On occasion of the mention of an alexandrine, the critic observes, that "the alexandrine may be thought a modern measure, but that Robert of Gloucester's wife is an alexandrine, with the addition of two syllables; and that Sternhold and Hopkins translated the psalms in the same measure of fourteen syllables, though they are printed otherwise."

This seems not to be accurately conceived or expressed: an alexandrine with the addition of two syllables, is no more an alexandrine than with the detraction of two syllables. Sternhold and Hopkins did generally write in the alternate measure of eight and six syllables; but Hopkins commonly rhymed the first and third, Sternhold only the second and fourth: so that Sternhold may be considered as writing couplets of

long lines ; but Hopkins wrote regular stanzas. From the practice of printing the long lines of fourteen syllables in two short lines, arose the licence of some of our poets, who, though professing to write in stanzas, neglect the rhymes of the first and third lines.

Pope has mentioned Petronius among the great names of criticism, as the remarker justly observes without any critical merit. It is to be suspected that Pope had never read his book, and mentioned him on the credit of two or three sentences which he had often seen quoted, imagining that where there was so much there must necessarily be more. Young men in haste to be renowned, too frequently talk of books which they have scarcely seen.

The revival of learning mentioned in this poem, affords an opportunity of mentioning the chief periods of literary history, of which this writer reckons five ; that of Alexander, of Ptolemy Philadelphus, of Augustus, of Leo the Tenth, of Queen Anne.

These observations are concluded with a remark which deserves great attention : “ In no polished nation, after criticism has been much studied, and the rules of writing established, has any very extraordinary book ever appeared.”

The Rape of the Lock was always regarded by Pope as the highest production of his genius. On occasion of this work, the history of the comic hero is given ; and we are told that it descended from Fassoni to Boileau, from Boileau to Garth, and from Garth to Pope. Garth is mentioned perhaps with too much honour ; but all are confessed to be inferior to Pope. There is in his remarks on this work no discovery of any latent beauty, nor any thing subtle or striking ; he is

indeed commonly right, but has discussed no difficult question.

The next pieces to be considered are the Verses to the Memory of an unfortunate Lady, the Prologue to Cato, and Epilogue to Jane Shore. The first piece he commends. On occasion of the second he digresses, according to his custom, into a learned dissertation on tragedies, and compares the English and French with the Greek stage. He justly censures Cato for want of action and of characters; but scarcely does justice to the sublimity of some speeches and the philosophical exactness in the sentiments. "The simile of mount Atlas, and that of the Numidian traveller smothered in the sands, are indeed in character," says the critic, "but sufficiently obvious." The simile of the mountain is indeed common; but that of the traveller I do not remember. That it is obvious is easy to say, and easy to deny. Many things are obvious when they are taught.

He proceeds to criticise the other works of Addison, till the epilogue calls his attention to Rowe, whose character he discusses in the same manner with sufficient freedom and sufficient candour.

The translation of the epistle of Sappho to Phaon is next considered: but Sappho and Ovid are more the subjects of this disquisition than Pope. We shall therefore pass over it to a piece of more importance, the Epistle of Eloisa to Abelard, which may justly be regarded as one of the works on which the reputation of Pope will stand in future times.

The critic pursues Eloisa through all the changes of passion, produces the passages of her letters to which any allusion is made, and intersperses many agreeable

particulars and incidental relations. There is not much profundity of criticism, because the beauties are sentiments of nature, which the learned and the ignorant feel alike. It is justly remarked by him, that the wish of Eloisa for the happy passage of Abelard into the other world, is formed according to the ideas of mystic devotion.

These are the pieces examined in this volume: whether the remaining part of the work will be one volume or more, perhaps the writer himself cannot yet inform us. This piece is, however, a complete work, so far as it goes; and the writer is of opinion that he has dispatched the chief part of his task: for he ventures to remark, that the reputation of Pope as a poet, among posterity, will be principally founded on his Windsor Forest, Rape of the Lock, and Eloisa to Abelard; while the facts and characters alluded to in his late writings will be forgotten and unknown, and their poignancy and propriety little relished; for wit and satire are transitory and perishable, but nature and passion are eternal.

He has interspersed some passages of Pope's life, with which most readers will be pleased. When Pope was yet a child, his father, who had been a merchant in London, retired to Binfield. He was taught to read by an aunt; and learned to write without a master, by copying printed books. His father used to order him to make English verses, and would oblige him to correct and retouch them over and over, and at last would say, "These are good rhymes."

At eight years of age, he was committed to one Taverner, a priest, who taught him the rudiments of the Latin and Greek. At this time he met with Ogleby's

Homer, which seized his attention; he fell next upon Sandys's Ovid, and remembered these two translations with pleasure to the end of his life.

About ten, being at school near Hyde Park Corner, he was taken to the play-house, and was so struck with the splendour of the drama, that he formed a kind of play out of Ogleby's Homer, intermixed with verses of his own. He persuaded the head-boys to act this piece, and Ajax was performed by his master's gardener. They were habited according to the pictures in Ogleby. At twelve he retired with his father to Windsor Forest, and formed himself by study in the best English poets.

In this extract it was thought convenient to dwell chiefly upon such observations as relate immediately to Pope, without deviating with the author into incidental inquiries. We intend to kindle, not to extinguish, curiosity, by this slight sketch of a work abounding with curious quotations and pleasing disquisitions. He must be much acquainted with literary history, both of remote and late times, who does not find in this essay many things which he did not know before: and if there be any too learned to be instructed in facts or opinions, he may yet properly read this book as a just specimen of literary moderation.

R E P L Y

TO A

PAPER IN THE GAZETTEER

OF MAY 26, 1757*.

IT is observed in the sage Gil Blas, that an exasperated author is not easily pacified. I have, therefore, very little hope of making my peace with the writer of the Eight Days Journey: indeed so little, that I have long deliberated whether I should not rather sit silently down under his displeasure, than aggravate my misfortune by a defence of which my heart forbodes the ill success. Deliberation is often useless. I am afraid that I have at last made the wrong choice; and that I might better have resigned my cause, without a struggle, to time and fortune, since I shall run the hazard of a new offence, by the necessity of asking him, *why he is angry*.

Distress and terror often discover to us those faults with which we should never have reproached ourselves in a happy state. Yet, dejected as I am, when I review the transaction between me and this writer, I cannot find that I have been deficient in reverence. When his book was first printed, he hints that I procured a sight of it before it was published. How the sight of it was procured I

* From the Literary Magazine, Vol. II. Page 253.

do not now very exactly remember; but if my curiosity was greater than my prudence, if I laid rash hands on the fatal volume, I have surely suffered like him who burst the box from which evil rushed into the world.

I took it, however, and inspected it as the work of an author not higher than myself; and was confirmed in my opinion, when I found that these letters were *not written to be printed*. I concluded, however, that though not *written to be printed*, they were *printed to be read*, and inserted one of them in the collection of November last. Not many days after I received a note, informing me, that I ought to have waited for a more correct edition. This injunction was obeyed. The edition appeared, and I supposed myself at liberty to tell my thoughts upon it, as upon any other book, upon a royal manifesto, or an act of parliament. But see the fate of ignorant temerity! I now find, but find too late, that instead of a writer whose only power is in his pen, I have irritated an important member of an important corporation; a man who, as he tells us in his letters, puts horses to his chariot.

It was allowed to the disputant of old to yield up the controversy with little resistance to the master of forty legions. Those who know how weakly naked truth can defend her advocates, would forgive me if I should pay the same respect to a Governor of the Foundlings. Yet the consciousness of my own rectitude of intention incites me to ask once again, how I have offended.

There are only three subjects upon which my unlucky pen has happened to venture. Tea; the

author of the Journal; and the Foundling Hospital.

Of Tea, what have I said? That I have drank it twenty years without hurt; and therefore believe it not to be poison: that if it dries the fibres, it cannot soften them; that if it constringes, it cannot relax. I have modestly doubted whether it has diminished the strength of our men, or the beauty of our women; and whether it much hinders the progress of our woollen or iron manufactures; but I allowed it to be a barren superfluity, neither medicinal nor nutritious, that neither supplied strength nor cheerfulness, neither relieved weariness, nor exhilarated sorrow: I inserted, without charge or suspicion of falsehood, the sums exported to purchase it; and proposed a law to prohibit it for ever.

Of the author I unfortunately said, that his injunction was somewhat too magisterial. This I said before I knew that he was a Governor of the Foundlings; but he seems inclined to punish this failure of respect, as the Czar of Muscovy made war upon Sweden, because he was not treated with sufficient honours when he passed through the country in disguise. Yet was not this irreverence without extenuation. Something was said of the merit of *meaning well*, and the Journalist was declared to be a man *whose failings might well be pardoned for his virtues*. This is the highest praise which human gratitude can confer upon human merit; praise that would have more than satisfied Titus or Augustus, but which I must own to be inadequate and penurious, when offered to the member of an important corporation.

I am asked whether I meant to satirize the man

or criticise the writer, when I say, that “ he believes, “ only perhaps because he has inclination to believe “ it, that the English and Dutch consume more Tea “ than the vast empire of China?” Between the writer and the man, I did not at that time consider the distinction. The writer I found not of more than mortal might, and I did not immediately recollect that the man put horses to his chariot. But I did not write wholly without consideration. I knew but two causes of belief, evidence and inclination. What evidence the Journalist could have of the Chinese consumption of Tea, I was not able to discover. The officers of the East India Company are excluded, they best know why, from the towns and the country of China; they are treated as we treat gipsies and vagrants, and obliged to retire every night to their own hovel. What intelligence such travellers may bring is of no great importance. And though the missionaries boast of having once penetrated further, I think they have never calculated the Tea drunk by the Chinese. There being thus no evidence for his opinion, to what could I ascribe it but to inclination?

I am yet charged more heavily for having said, that *he has no intention to find any thing right at home.* I believe every reader restrained this imputation to the subject which produced it, and supposed me to insinuate only that he meant to spare no part of the Tea-table, whether essence or circumstance. But this line he has selected as an instance of virulence and acrimony, and confutes it by a lofty and splendid panegyric on himself. He asserts, that he finds many things right at home, and that he loves his country almost to enthusiasm.

I had not the least doubt that he found in his country many things to please him; nor did I suppose that he desired the same inversion of every part of life, as of the use of Tea. The proposal of drinking Tea sour, shewed indeed such a disposition to practical paradoxes, that there was reason to fear lest some succeeding letter should recommend the dress of the Picts, or the cookery of the Esquimaux. However, I met with no other innovations, and therefore was willing to hope that he found something right at home.

But his love of his country seemed not to rise quite to enthusiasm, when, amidst his rage against Tea, he made a smooth apology for the East India Company, as men who might not think themselves obliged to be political arithmeticians. I hold, though no enthusiastic patriot, that every man who lives and trades under the protection of a community, is obliged to consider whether he hurts or benefits those who protect him; and that the most which can be indulged to private interest is a neutral traffic, if any such can be, by which our country is not injured, though it may not be benefited.

But he now renews his declamation against Tea, notwithstanding the greatness or power of those that have interest or inclination to support it. I know not of what power or greatness he may dream. The importers only have an interest in defending it. I am sure they are not great, and I hope they are not powerful. Those whose inclination leads them to continue this practice, are too numerous, but I believe their power is such, as the Journalist may defy with-

out enthusiasm. The love of our country, when it rises to enthusiasm, is an ambiguous and uncertain virtue: when a man is enthusiastic, he ceases to be reasonable, and when he once departs from reason, what will he do but drink sour Tea? As the Journalist, though enthusiastically zealous for his country, has, with regard to smaller things, the placid happiness of philosophical indifference, I can give him no disturbance by advising him to restrain even the love of his country within due limits, lest it should sometimes swell too high, fill the whole capacity of his soul, and leave less room for the love of truth.

Nothing now remains but that I review my positions concerning the Foundling Hospital. What I declared last month, I declare now once more, that I found none of the children that appeared to have heard of the catechism. It is inquired how I wandered, and how I examined? There is doubtless subtilty in the question: I know not well how to answer it. Happily I did not wander alone; I attended some ladies with another gentleman, who all heard and assisted the inquiry with equal grief and indignation. I did not conceal my observations. Notice was given of this shameful defect soon after, at my request, to one of the highest names of the society. This I am now told is incredible; but since it is true, and the past is out of human power, the most important corporation cannot make it false. But why is it incredible? Because in the rules of the hospital the children are ordered to learn the rudiments of religion. Orders are easily made, but they do not execute themselves. They say

their catechism, at stated times, under an able master. But this able master was, I think, not elected before last February; and my visit happened, if I mistake not, in November. The children were shy when interrogated by a stranger. This may be true, but the same shyness I do not remember to have hindered them from answering other questions; and I wonder why children so much accustomed to new spectators should be eminently shy.

My opponent, in the first paragraph, calls the inference that I made from this negligence, a hasty conclusion: to the decency of this expression I had nothing to object: but as he grew hot in his career, his enthusiasm began to sparkle; and in the vehemence of his postscript, he charges my assertions, and my reasons for advancing them, with folly and malice. His argumentation being somewhat enthusiastical, I cannot fully comprehend, but it seems to stand thus: my insinuations are foolish or malicious, since I know not one of the Governors of the Hospital; for he that knows not the Governors of the Hospital, must be very foolish or malicious.

He has, however, so much kindness for me, that he advises me to consult my safety when I talk of corporations. I know not what the most important corporation can do, becoming manhood, by which my safety is endangered. My reputation is safe, for I can prove the fact; my quiet is safe, for I meant well; and for any other safety, I am not used to be very solicitous.

I am always sorry when I see any being labouring in vain; and in return for the Journalist's attention to my

safety, I will confess some compassion for his tumultuous resentment; since all his invectives fume into the air, with so little effect upon me, that I still esteem him as one that has the *merit of meaning well*; and still believe him to be *a man whose failings may be justly pardoned for his virtues*.

INTRODUCTION

TO THE

PROCEEDINGS OF THE COMMITTEE

APPOINTED

TO MANAGE THE CONTRIBUTIONS BEGUN AT LONDON, DEC. 18, 1759,
FOR CLOTHING FRENCH PRISONERS OF WAR.

THE Committee entrusted with the money contributed to the relief of the subjects of France, now prisoners in the British dominions, here lay before the public an exact account of all the sums received and expended, that the donors may judge how properly their benefactions have been applied.

Charity would lose its name, were it influenced by so mean a motive as human praise: it is therefore not intended to celebrate by any particular memorial, the liberality of single persons, or distinct societies; it is sufficient that their works praise them.

Yet he who is far from seeking honour, may very justly obviate censure. If a good example has been set, it may lose its influence by misrepresentation; and to free charity from reproach, is itself a charitable action.

Against the relief of the French only one argument has been brought; but that one is so popular and specious, that if it were to remain unexamined,

it would by many be thought irrefragable. It has been urged, that charity, like other virtues, may be improperly and unseasonably exerted ; that while we are relieving Frenchmen, there remain many Englishmen unrelieved ; that while we lavish pity on our enemies, we forget the misery of our friends.

Grant this argument all it can prove, and what is the conclusion?—That to relieve the French is a good action, but that a better may be conceived. This is all the result, and this all is very little. To do the best can seldom be the lot of man ; it is sufficient if, when opportunities are presented, he is ready to do good. How little virtue could be practised, if beneficence were to wait always for the most proper objects, and the noblest occasions ; occasions that may never happen, and objects that may never be found.

It is far from certain, that a single Englishman will suffer by the charity to the French. New scenes of misery make new impressions ; and much of the charity which produced these donations, may be supposed to have been generated by a species of calamity never known among us before. Some imagine that the laws have provided all necessary relief in common cases, and remit the poor to the care of the public ; some have been deceived by fictitious misery, and are afraid of encouraging imposture ; many have observed want to be the effect of vice, and consider casual almsgivers as patrons of idleness. But all these difficulties vanish in the present case : we know that for the Prisoners of War there is no legal provision ; we see their distress, and are certain of its cause ; we

know that they are poor and naked, and poor and naked without a crime.

But it is not necessary to make any concessions. The opponents of this charity must allow it to be good, and will not easily prove it not to be the best. That charity is best, of which the consequences are most extensive: the relief of enemies has a tendency to unite mankind in fraternal affection; to soften the acrimony of adverse nations, and dispose them to peace and amity; in the mean time, it alleviates captivity, and takes away something from the miseries of war. The rage of war, however mitigated, will always fill the world with calamity and horror: let it not then be unnecessarily extended; let animosity and hostility cease together; and no man be longer deemed an enemy, than while his sword is drawn against us.

The effects of these contributions may, perhaps, reach still further. Truth is best supported by virtue: we may hope from those who feel or who see our charity, that they shall no longer detest as heresy that religion which makes its professors the followers of Him, who has commanded us to "do good to them that hate us."

ON THE
BRAVERY
OF THE
ENGLISH COMMON SOLDIERS.

BY those who have compared the military genius of the English with that of the French nation, it is remarked, that *the French officers will always lead, if the soldiers will follow*; and that *the English soldiers will always follow, if their officers will lead*.

In all pointed sentences, some degree of accuracy must be sacrificed to conciseness; and, in this comparison, our officers seem to lose what our soldiers gain. I know not any reason for supposing that the English officers are less willing than the French to lead; but it is, I think, universally allowed, that the English soldiers are more willing to follow. Our nation may boast, beyond any other people in the world, of a kind of epidemic bravery, diffused⁴ equally through all its ranks. We can shew a peasantry of heroes, and fill our armies with clowns, whose courage may vie with that of their general.

There may be some pleasure in tracing the causes of this plebeian magnanimity. The qualities which commonly make an army formidable, are long habits of regularity, great exactness of discipline, and

great confidence in the commander. Regularity may, in time, produce a kind of mechanical obedience to signals and commands, like that which the perverse Cartesians impute to animals; discipline may impress such an awe upon the mind, that any danger shall be less dreaded than the danger of punishment; and confidence in the wisdom or fortune of the general, may induce the soldiers to follow him blindly to the most dangerous enterprise.

What may be done by discipline and regularity, may be seen in the troops of the Russian empress and Prussian monarch. We find that they may be broken without confusion, and repulsed without flight.

But the English troops have none of these requisites in any eminent degree. Regularity is by no means part of their character: they are rarely exercised, and therefore shew very little dexterity in their evolutions as bodies of men, or in the manual use of their weapons as individuals; they neither are thought by others, nor by themselves, more active or exact than their enemies, and therefore derive none of their courage from such imaginary superiority.

The manner in which they are dispersed in quarters over the country during times of peace, naturally produces laxity of discipline: they are very little in sight of their officers; and, when they are not engaged in the slight duty of the guard, are suffered to live every man his own way.

The equality of English privileges, the impartiality of our laws, the freedom of our tenures, and the prosperity of our trade, dispose us very little to

reverence of superiors. It is not to any great esteem of the officers that the English soldier is indebted for his spirit in the hour of battle; for perhaps it does not often happen that he thinks much better of his leader than of himself. The French count, who has lately published the Art of War, remarks how much soldiers are animated, when they see all their dangers shared by those who were born to be their masters, and whom they consider as beings of a different rank. The Englishman despises such motives of courage: he was born without a master; and looks not on any man, however dignified by lace or titles, as deriving from nature any claims to his respect, or inheriting any qualities superior to his own.

There are some, perhaps, who would imagine that every Englishman fights better than the subjects of absolute governments, because he has more to defend. But what has the English more than the French soldier? Property they are both commonly without. Liberty is, to the lowest rank of every nation, little more than the choice of working or starving; and this choice is, I suppose, equally allowed in every country. The English soldier seldom has his head very full of the constitution; nor has there been, for more than a century, any war that put the property or liberty of a single Englishman in danger.

Whence then is the courage of the English vulgar? It proceeds, in my opinion, from that dissolution of dependance which obliges every man to regard his own character. While every man is fed by his own hands, he has no need of any servile arts; he may always have wages for his labour; and is no less necessary to his employer, than his employer is

to him. While he looks for no protection from others, he is naturally roused to be his own protector; and having nothing to abate his esteem of himself, he consequently aspires to the esteem of others. Thus every man that crowds our streets is a man of honour, disdainful of obligation, impatient of reproach, and desirous of extending his reputation among those of his own rank; and as courage is in most frequent use, the fame of courage is most eagerly pursued. From this neglect of subordination I do not deny that some inconveniences may from time to time proceed: the power of the law does not always sufficiently supply the want of reverence, or maintain the proper distinction between different ranks; but good and evil will grow up in this world together; and they who complain, in peace, of the insolence of the populace, must remember, that their insolence in peace is bravery in war.

CONSIDERATIONS

ON THE

PLANS OFFERED FOR THE CONSTRUCTION OF BLACKFRIARS BRIDGE.

IN THREE LETTERS, TO THE PRINTER OF THE GAZETTEER.

LETTER I.

SIR,

Dec. 1, 1759.

THE Plans which have been offered by different architects, of different reputation and abilities, for the Construction of the Bridge intended to be built at Blackfriars, are, by the rejection of the greater part, now reduced to a small number; in which small number three are supposed to be much superior to the rest; so that only three architects are now properly competitors for the honour of this great employment; *by two of whom are proposed semicircular, and by the other elliptical arches.*

The question is, therefore, whether an elliptical or semicircular arch is to be preferred?

The first excellence of a bridge built for commerce over a large river, is strength; for a bridge which cannot stand, however beautiful, will boast its beauty but a little while; the stronger arch is

therefore to be preferred, and much more to be preferred, if with greater strength it has greater beauty.

Those who are acquainted with the mathematical principles of architecture, are not many; and yet fewer are they who will, upon any single occasion, endure any laborious stretch of thought, or harass their minds with unaccustomed investigations. We shall therefore attempt to shew the *weakness of the elliptical arch*, by arguments which appeal simply to common reason, and which will yet stand the test of geometrical examination.

All arches have a certain degree of weakness. No hollow building can be equally strong with a solid mass, of which every upper part presses perpendicularly upon the lower. Any weight laid upon the top of an arch, has a tendency to force that top into the vacuity below; and the arch thus loaded on the top, stands only because the stones that form it, being wider in the upper than in the lower parts, that part that fills a wider space cannot fall through a space less wide; but the force which laid upon a flat would press directly downwards, is dispersed each way in a lateral direction, as the parts of a beam are pushed out to the right and left by a wedge driven between them. In proportion as the stones are wider at the top than at the bottom, they can less easily be forced downwards, and as their lateral surfaces tend more from the center to each side, to so much more is the pressure directed laterally towards the piers, and so much less perpendicularly towards the vacuity.

Upon this plain principle the semicircular arch may be demonstrated to excel in strength the ellip-

tical arch, which approaching nearer to a strait line, must be constructed with stones whose diminution downwards is very little, and of which the pressure is almost perpendicular.

It has yet been sometimes asserted by hardy ignorance, that the elliptical arch is stronger than the semicircular; or in other terms, that any mass is more strongly supported the less it rests upon the supporters. If the elliptical arch be equally strong with the semicircular, that is, if an arch, by approaching to a strait line, loses none of its stability, it will follow, that all arcuation is useless, and that the bridge may at last, without any inconvenience, consist of stone laid in strait lines from pillar to pillar. But if a strait line will bear no weight, which is evident at the first view, it is plain likewise, that an ellipsis will bear very little; and that as the arch is more curved, its strength is increased.

Having thus evinced the superior strength of the semicircular arch, we have sufficiently proved, that it ought to be preferred; but to leave no objection unprevented, we think it proper likewise to observe, that the elliptical arch must always appear to want elevation and dignity; and that if beauty be to be determined by suffrages, the elliptical arch will have little to boast, since the only bridge of that kind has now stood *two hundred years without imitation*.

If in opposition to these arguments, and in defiance at once of right reason and general authority, the elliptical arch should at last be chosen, what will the world believe, than that some other motive than reason influenced the determination? And some degree of partiality cannot but be suspected by him, who has

been told that one of the judges appointed to decide this question, is Mr. M---ll---r, who having, by ignorance or thoughtlessness, already preferred the elliptical arch, will probably think himself obliged to maintain his own judgment, though his opinion will avail but little with the public, when it is known that Mr. S---ps---n declares it to be false.

He that in the list of the committee chosen for the superintendency of the bridge, reads many of the most illustrious names of this great city, will hope that the greater number will have more reverence for the opinion of posterity, than to disgrace themselves, and the metropolis of the kingdom, in compliance with any man, who, instead of voting, aspires to dictate, perhaps without any claim to such superiority, either by greatness of birth, dignity of employment, extent of knowledge, or largeness of fortune.

LETTER II.

SIR,

Dec. 8, 1759.

IN questions of general concern, there is no law of government, or rule of decency, that forbids open examination and public discussion. I shall therefore not betray, by a mean apology, that right which no man has power, and I suppose, no wise man has desire to refuse me; but shall consider the Letter published by you last Friday, in defence of Mr. M---'s design for a new bridge.

Mr. M--- proposes elliptical arches. It has been objected that elliptical arches are weak, and

therefore improper for a bridge of commerce, in a country where greater weights are ordinarily carried by land than perhaps in any other part of the world. That there is an elliptical bridge at Florence is allowed, but the objectors maintain, that its stability is so much doubted, *that carts* are not permitted to pass over it.

To this no answer is made, but that it was built for coaches; and if it had been built for carts, it would have been made stronger; thus all the controvertists agree, that the bridge is too weak for carts; and it is of little importance, whether carts are prohibited because the bridge is weak, or whether the architect, knowing that carts were prohibited, voluntarily constructed a weak bridge. The instability of the elliptical arch has been sufficiently proved by argument, and Ammanuti's attempt has proved it by example.

The iron rail, whether gilt or varnished, appears to me unworthy of debate. I suppose every judicious eye will discern it to be minute and trifling, equally unfit to make a part of a great design, whatever be its colour. I shall only observe how little the writer understands his own positions, when he recommends it to be cast in whole pieces from pier to pier. That iron forged is stronger than iron cast, every smith can inform him; and if it be cast in large pieces, the fracture of a single bar must be repaired by a new piece.

The abrupt rise, which is feared from firm circular arches, may be easily prevented, by a little extension of the abutment at each end, which will take away the objection, and add almost nothing to the expence.

The whole of the argument in favour of Mr. M——, is only that there is an elliptical bridge at Florence, and

an iron balustrade at Rome ; the bridge is owned to be weak, and the iron balustrade we consider as mean ; and are loth that our own country should unite two follies in a public work.

The architrave of Perault, which has been pompously produced, bears nothing but its entablature ; and is so far from owing its support to the artful section of the stone, that it is held together by cramps of iron ; to which I am afraid Mr. M—— must have recourse, if he persists in his ellipsis, or, to use the words of his vindicator, forms his arch of four segments of circles drawn from four different centers.

That Mr. M——obtained the prize of the architecture at Rome, a few months ago, is willingly confessed ; nor do his opponents doubt that he obtained it by deserving it. May he continue to obtain whatever he deserves ; but let it not be presumed that a prize granted at Rome implies an irresistible degree of skill. The competition is only between boys, and the prize given to excite laudable industry, not to reward consummate excellence. Nor will the suffrage of the Romans much advance any name among those who know, what no man of science will deny, that architecture has for some time degenerated at Rome to the lowest state, and that the Pantheon is now deformed by petty decorations.

I am, SIR,

Yours, &c.

LETTER III.

SIR,

Dec. 15, 1759.

IT is the common fate of erroneous positions, that they are betrayed by defence, and obscured by explanation; that their authors deviate from the main question into incidental disquisitions, and raise a mist where they should let in light.

Of all these concomitants of errors, the Letter of Dec. 10, in favour of elliptical arches, has afforded examples. A great part of it is spent upon digressions. The writer allows, that *the first excellence of a bridge is undoubtedly strength*; but this concession affords him an opportunity of telling us, that strength, or provision against decay, has its limits; and of mentioning the Monument and Cupola, without any advance towards evidence or argument.

The *first excellence of a bridge* is now allowed to be *strength*; and it has been asserted, that a semi-ellipsis has less strength than a semicircle. To this he first answers, that *granting* this position *for a moment*, the semi-ellipsis may yet have strength sufficient for the purposes of commerce. This grant, which was made but for a moment, needed not to have been made at all; for, before he concludes his Letter, he undertakes to prove, that the *elliptical arch must in all respects be superior in strength to the semicircle*. For this daring assertion he made way by the intermediate paragraphs; in which he observes, that *the convexity of a semi-ellipsis may be increased at will to any degree that strength may require*; which is, that an elliptical arch may be made less elliptical, to be made less weak; or that an arch,

which by its elliptical form is superior in strength to the semicircle, may become almost as strong as a semicircle, by being made almost semicircular.

That the longer diameter of an ellipsis may be shortened, till it shall differ little from a circle, is indisputably true ; but why should the writer forget the semicircle differs as little from such an ellipsis ? It seems that the difference, whether small or great, is to the advantage of the semicircle ; for he does not promise that the elliptical arch, with all the convexity that his imagination can confer, will stand without *cramps of iron, and melted lead, and large stones, and a very thick arch* ; assistances which the semicircle does not require, and which can be yet less required by a semi-ellipsis, which is *in all respects superior in strength*.

Of a man who loves opposition so well, as to be thus at variance with himself, little doubt can be made of his contrariety to others ; nor do I think myself entitled to complain of disregard from one with whom the performances of antiquity have so *little weight* : yet in defiance of all this contemptuous superiority, I must again venture to declare, that *a strait line will bear no weight* ; being convinced, that not even the science of Vasari can make that form strong which the laws of nature have condemned to weakness. By the position, that *a strait line will bear nothing*, is meant that *it receives no strength from straitness* ; for that many bodies, laid in strait lines, will support weight by the cohesion of their parts, every one has found, who has seen dishes on a shelf, or a thief upon the gallows. It is not denied, that stones may be so crushed together by enormous pressure on each side, that a heavy mass may safely be laid upon them ; but the strength must

be derived merely from the lateral resistance ; and the line so loaded will be itself part of the load.

The semi-elliptical arch has one recommendation yet unexamined ; we are told that it is difficult of execution. Why difficulty should be chosen for its own sake, I am not able to discover ; but it must not be forgotten, that as the convexity is increased, the difficulty is lessened ; and I know not well whether this writer, who appears equally ambitious of difficulty and studious of strength, will wish to increase the convexity for the gain of strength, or to lessen it for the love of difficulty.

The friend of Mr. M——, however he may be mistaken in some of his opinions, does not want the appearance of reason, when he prefers facts to theories ; and that I may not dismiss the question without some appeal to facts, I will borrow an example, suggested by a great artist, and recommended to those who may still doubt which of the two arches is the stronger, to press an egg first on the ends, and then upon the sides.

I am, SIR,

Yours, &c.

SOME THOUGHTS
ON
A G R I C U L T U R E,

BOTH ANCIENT AND MODERN :

WITH AN ACCOUNT OF THE HONOUR DUE TO AN ENGLISH
FARMER*.

AGRICULTURE, in the primeval ages, was the common parent of traffic ; for the opulence of mankind then consisted in cattle, and the product of tillage ; which are now very essential for the promotion of trade in general, but more particularly so to such nations as are most abundant in cattle, corn, and fruits. The labour of the farmer gives employment to the manufacturer, and yields a support for the other parts of a community : it is now the spring which sets the whole grand machine of commerce in motion ; and the sail could not be spread without the assistance of the plough. But, though the farmers are of such utility in a state, we find them in general too much disregarded among the politer kind of people in the present age ; while we cannot help observing the honour that antiquity has always paid to the profession of the husbandman : which naturally leads us into some reflections upon that occasion.

Though mines of gold and silver should be exhausted, and the species made of them lost ; though

* From the Visitor, for February, 1756, p. 59.

diamonds and pearls should remain concealed in the bowels of the earth; and the womb of the sea; though commerce with strangers be prohibited; though all arts, which have no other object than splendor and embellishment, should be abolished; yet the fertility of the earth alone would afford an abundant supply for the occasions of an industrious people, by furnishing subsistence for them; and such armies as should be mustered in their defence. We, therefore, ought not to be surprised, that Agriculture was in so much honour among the ancients: for it ought rather to seem wonderful that it should ever cease to be so, and that the most necessary and most indispensable of all professions should have fallen into any contempt.

Agriculture was in no part of the world in higher consideration than Egypt, where it was the particular object of government and policy: nor was any country ever better peopled, richer, or more powerful. The Satrapæ, among the Assyrians and Persians, were rewarded, if the lands in their governments were well cultivated; but were punished, if that part of their duty was neglected. Africa abounded in corn; but the most famous countries were Thrace, Sardinia, and Sicily.

Cato, the censor, has justly called Sicily the magazine and nursing mother of the Roman people, who were supplied from thence with almost all their corn, both for the use of the city, and the subsistence of her armies: though we also find in Livy, that the Romans received no inconsiderable quantities of corn from Sardinia. But, when Rome had made herself mistress of Carthage and Alexandria, Africa and Egypt became her store-houses: for those cities sent such numerous

fleets every year, freighted with corn to Rome, that Alexandria alone annually supplied twenty millions of bushels: and, when the harvest happened to fail in one of these provinces, the other came in to its aid, and supported the metropolis of the world; which, without this supply, would have been in danger of perishing by famine. Rome actually saw herself reduced to this condition under Augustus; for there remained only three days provision of corn in the city: and that prince was so full of tenderness for the people, that he had resolved to poison himself, if the expected fleets did not arrive before the expiration of that time; but they came; and the preservation of the Romans was attributed to the good fortune of their emperor: but wise precautions were taken to avoid the like danger for the future.

When the seat of empire was transplanted to Constantinople, that city was supplied in the same manner: and when the emperor Septimius Severus died, there was corn in the public magazines for seven years, expending daily 75,000 bushels in bread, for 600,000 men.

The ancients were no less industrious in the cultivation of the vine than in that of corn, though they applied themselves to it later: for Noah planted it by order, and discovered the use that might be made of the fruit, by pressing out and preserving the juice. The vine was carried by the offspring of Noah into the several countries of the world: but Asia was the first to experience the sweets of this gift; from whence it was imparted to Europe and Africa. Greece and Italy, which were distinguished in so many other respects, were particularly so by the excellency of their

wines. Greece was most celebrated for the wines of Cyprus, Lesbos, and Chio; the former of which is in great esteem at present: though the cultivation of the vine has been generally suppressed in the Turkish dominions. As the Romans were indebted to the Grecians for the arts and sciences, so were they likewise for the improvement of their wines; the best of which were produced in the country of Capua, and were called the Massic; Calenian, Formian, Cæcuban, and Falernian, so much celebrated by Horace. Domitian passed an edict for destroying all the vines, and that no more should be planted throughout the greatest part of the west; which continued almost two hundred years afterwards, when the emperor Probus employed his soldiers in planting vines in Europe, in the same manner as Hannibal had formerly employed his troops in planting olive trees in Africa. Some of the ancients have endeavoured to prove, that the cultivation of vines is more beneficial than any other kind of husbandry: but, if this was thought so in the time of Columella, it is very different at present; nor were all the ancients of his opinion, for several gave the preference to pasture lands.

The breeding of cattle has always been considered as an important part of Agriculture. The riches of Abraham, Laban, and Job, consisted in their flocks and herds. We also find from Latinus in Virgil, and Ulysses in Homer, that the wealth of those princes consisted in cattle. It was likewise the same among the Romans, till the introduction of money, which put a value upon commodities, and established a new kind of barter. Varro has not disdained to give an extensive account of all the beasts that are of any use

to the country, either for tillage, breed, carriage, or other conveniences of man. And Cato, the censor, was of opinion, that the feeding of cattle was the most certain and speedy method of enriching a country.

Luxury, avarice, injustice, violence, and ambition, take up their ordinary residence in populous cities; while the hard and laborious life of the husbandman will not admit of these vices. The honest farmer lives in a wise and happy state, which inclines him to justice, temperance, sobriety, sincerity, and every virtue that can dignify human nature. This gave room for the poets to feign, that Astræa, the Goddess of Justice, had her last residence among husbandmen, before she quitted the earth. Hesiod and Virgil have brought the assistance of the Muses in praise of Agriculture. Kings, generals, and philosophers, have not thought it unworthy their birth, rank, and genius, to leave precepts to posterity upon the utility of the husbandman's profession. Hiero, Attalus, and Archelaus, kings of Syracuse, Pergamus, and Cappadocia, have composed books for supporting and augmenting the fertility of their different countries. The Carthaginian general, Mago, wrote twenty-eight volumes upon this subject; and Cato, the censor, followed his example. Nor have Plato, Xenophon, and Aristotle, omitted this article, which makes an essential part of their politics. And Cicero, speaking of the writings of Xenophon, says, "How fully and excellently does he, in that book called his *Oeconomics*, set out the advantages of husbandry, and a country life?"

When Britain was subject to the Romans, she annually supplied them with great quantities of corn; and the Isle of Anglesea was then looked upon as the granary

for the western provinces: but the Britons, both under the Romans and Saxons, were employed like slaves at the plough. On the intermixture of the Danes and Normans, possessions were better regulated, and the state of vassalage gradually declined, till it was entirely wore off under the reigns of Henry VII. and Edward VI. for they hurt the old nobility by favouring the commons, who grew rich by trade, and purchased estates.

The wines of France, Portugal, and Spain, are now the best; while Italy can only boast of the wine made in Tuscany. The breeding of cattle is now chiefly confined to Denmark and Ireland. The corn of Sicily is still in great esteem, as well as what is produced in the northern countries: but England is the happiest spot in the universe for all the principal kinds of Agriculture, and especially its great produce of corn.

The improvement of our landed estates, is the enrichment of the kingdom: for, without this, how could we carry on our manufactures, or prosecute our commerce? We should look upon the English Farmer as the most useful member of society. His arable grounds not only supply his fellow-subjects with all kinds of the best grain, but his industry enables him to export great quantities to other kingdoms, which might otherwise starve; particularly Spain and Portugal: for, in one year, there have been exported 51,520 quarters of barley, 219,781 of malt, 1,920 of oatmeal, 1,329 of rye, and 153,343 of wheat; the bounty on which amounted to 72,433 pounds. What a fund of treasure arises from his pasture lands, which breed such innumerable flocks of sheep, and afford such fine herds of cattle, to feed Britons, and

clothe mankind! He rears flax and hemp for the making of linen; while his plantations of apples and hops supply him with generous kinds of liquors.

The land-tax, when at four shillings in the pound, produces 2,000,000 pounds a year. This arises from the labour of the husbandman: it is a great sum: but how greatly is it increased by the means it furnishes for trade? Without the industry of the Farmer, the manufacturer could have no goods to supply the merchant, nor the merchant find any employment for the mariners: trade would be stagnated; riches would be of no advantage to the great; and labour of no service to the poor.

The Romans, as historians all allow,
Sought, in extreme distress, the rural plough;
Io triumphe! for the village swain
Retir'd to be a nobleman * again.

* Cincinnatus.

FURTHER THOUGHTS

AGRICULTURE*.

AT my last *visit*, I took the liberty of mentioning a subject, which, I think, is not considered with attention proportionate to its importance. Nothing can more fully prove the ingratitude of mankind, a crime often charged upon them, and often denied, than the little regard which the disposers of honorary rewards have paid to Agriculture; which is treated as a subject so remote from common life, by all those who do not immediately hold the plough, or give fodder to the ox, that I think there is room to question, whether a great part of mankind has yet been informed that life is sustained by the fruits of the earth. I was once indeed provoked to ask a lady of great eminence for genius, *Whether she knew of what bread is made?*

I have already observed, how differently Agriculture was considered by the heroes and wise men of the Roman commonwealth, and shall now only add, that even after the emperors had made great alteration in the system of life, and taught men to portion out their

* From the Visitor, for March 1756, p. 111.

esteem to other qualities than usefulness, Agriculture still maintained its reputation, and was taught by the polite and elegant Celsus among the other arts.

The usefulness of Agriculture I have already shewn; I shall now, therefore, prove its necessity: and having before declared, that it produces the chief riches of a nation, I shall proceed to shew, that it gives its only riches, the only riches which we can call our own, and of which we need not fear either deprivation or diminution.

Of nations, as of individuals, the first blessing is independence. Neither the man nor the people can be happy to whom any human power can deny the necessities or conveniencies of life. There is no way of living without the need of foreign assistance, but by the product of our own land, improved by our own labour. Every other source of plenty is perishable or casual.

Trade and manufactures must be confessed often to enrich countries; and we ourselves are indebted to them for those ships by which we now command the sea, from the equator to the poles, and for those sums with which we have shewn ourselves able to arm the nations of the north in defence of regions in the western hemisphere. But trade and manufactures, however profitable, must yield to the cultivation of lands in usefulness and dignity.

Commerce, however we may please ourselves with the contrary opinion, is one of the daughters of fortune, inconstant and deceitful as her mother; she chooses her residence where she is least expected, and shifts her abode, when her continuance is in appear-

ance most firmly settled. Who can read of the present distresses of the Genoese, whose only choice now remaining is, from what monarch they shall solicit protection? Who can see the Hanseatic towns in ruins, where perhaps the inhabitants do not always equal the number of the houses; but he will say to himself, These are the cities, whose trade enabled them once to give laws to the world, to whose merchants princes sent their jewels in pawn, from whose treasuries armies were paid, and navies supplied! And who can then forbear to consider trade as a weak and uncertain basis of power, and wish to his own country greatness more solid, and felicity more durable?

It is apparent, that every trading nation flourishes, while it can be said to flourish, by the courtesy of others. We cannot compel any people to buy from us, or to sell to us. A thousand accidents may prejudice them in favour of our rivals; the workmen of another nation may labour for less price, or some accidental improvement, or natural advantage, may procure a just preference to their commodities; as experience has shewn, that there is no work of the hands, which, at different times, is not best performed in different places.

Traffic, even while it continues in its state of prosperity, must owe its success to Agriculture; the materials of manufacture are the produce of the earth. The wool which we weave into cloth, the wood which is formed into cabinets, the metals which are forged into weapons, are supplied by nature with the help of art. Manufactures, indeed, and profitable manufactures, are sometimes raised from imported

materials, but then we are subjected a second time to the caprice of our neighbours. The natives of Lombardy might easily resolve to retain their silk at home, and employ workmen of their own to weave it. And this will certainly be done when they grow wise and industrious, when they have sagacity to discern their true interest, and vigour to pursue it.

Mines are generally considered as the great sources of wealth, and superficial observers have thought the possession of great quantities of precious metals the first national happiness. But Europe has long seen, with wonder and contempt, the poverty of Spain, who thought herself exempted from the labour of tilling the ground, by the conquest of Peru, with its veins of silver. Time, however, has taught even this obstinate and haughty nation, that without Agriculture, they may indeed be the transmitters of money, but can never be the possessors. They may dig it out of the earth, but must immediately send it away to purchase cloth or bread, and it must at last remain with some people wise enough to sell much, and to buy little; to live upon their own lands, without a wish for those things which nature has denied them.

Mines are themselves of no use, without some kind of Agriculture. We have, in our own country, inexhaustible stores of iron, which lie useless in the ore for want of wood. It was never the design of Providence to feed man without his own concurrence; we have from nature only what we cannot provide for ourselves; she gives us wild fruits which art must meliorate, and drossy metals, which labour must refine.

Particular metals are valuable, because they are scarce; and they are scarce, because the mines that yield them are emptied in time. But the surface of the earth is more liberal than its caverns. The field, which is this autumn laid naked by the sickle, will be covered, in the succeeding summer, by a new harvest; the grass, which the cattle are devouring, shoots up again when they have passed over it.

Agriculture, therefore, and Agriculture alone, can support us without the help of others, in certain plenty and genuine dignity. Whatever we buy from without, the sellers may refuse; whatever we sell, manufactured by art, the purchasers may reject; but, while our ground is covered with corn and cattle, we can want nothing; and if imagination should grow sick of native plenty, and call for delicacies or embellishments from other countries, there is nothing which corn and cattle will not purchase.

Our country is, perhaps, beyond all others, productive of things necessary to life. The pine-apple thrives better between the tropics, and better furs are found in the northern regions. But let us not envy these unnecessary privileges. Mankind cannot subsist upon the indulgencies of nature, but must be supported by her more common gifts. They must feed upon bread, and be clothed with wool; and the nation that can furnish these universal commodities, may have her ships welcomed at a thousand ports, or sit at home and receive the tribute of foreign countries, enjoy their arts, or treasure up their gold.

It is well known to those who have examined the state of other countries, that the vineyards of France are more than equivalent to the mines of America; and that one great use of Indian gold, and Peruvian silver, is to procure the wines of Champagne and Burgundy. The advantage is indeed always rising on the side of France, who will certainly have wines, when Spain, by a thousand natural or accidental causes, may want silver. But surely the valleys of England have more certain stores of wealth. Wines are chosen by caprice; the products of France have not always been equally esteemed; but there never was any age, or people, that reckoned bread among superfluities, when once it was known. The price of wheat and barley suffers not any variation, but what is caused by the uncertainty of seasons.

I am far from intending to persuade my countrymen to quit all other employments for that of manuring the ground. I mean only to prove, that we have, at home, all that we can want, and that therefore we need feel no great anxiety about the schemes of other nations for improving their arts, or extending their traffic. But there is no necessity to infer, that we should cease from commerce, before the revolution of things shall transfer it to some other regions! Such vicissitudes the world has often seen; and therefore such we have reason to expect. We hear many clamours of declining trade, which are not, in my opinion, always true; and many imputations of that decline to governors and ministers, which may be sometimes just, and sometimes calumnious. But it is foolish to imagine, that any care or policy can keep commerce at a stand, which almost

every nation has enjoyed and lost, and which we must expect to lose as we have long enjoyed it.

There is some danger, lest our neglect of Agriculture should hasten its departure. Our industry has for many ages been employed in destroying the woods which our ancestors have planted. It is well known that commerce is carried on by ships, and that ships are built out of trees; and therefore, when I travel over naked plains, to which tradition has preserved the name of forests, or see hills arising on either hand, barren and useless, I cannot forbear to wonder, how that commerce of which we promise ourselves the perpetuity, shall be continued by our descendants; nor can restrain a sigh when I think on the time, a time at no great distance, when our neighbours may deprive us of our naval influence, by refusing us their timber.

By Agriculture only can commerce be perpetuated; and by Agriculture alone can we live in plenty without intercourse with other nations. This, therefore, is the great art, which every government ought to protect, every proprietor of lands to practise, and every inquirer into nature to improve.

THE
VISION OF THEODORE,

THE HERMIT OF TENERIFFE,

FOUND IN HIS CELL.

SON of Perseverance, whoever thou art, whose curiosity has led thee hither, read and be wise. He that now calls upon thee is Theodore, the Hermit of Teneriffe, who in the fifty-seventh year of his retreat left this instruction to mankind, lest his solitary hours should be spent in vain.

I was once what thou art now, a groveller on the earth, and a gazer at the sky; I trafficked and heaped wealth together, I loved and was favoured, I wore the robe of honour and heard the music of adulation; I was ambitious, and rose to greatness; I was unhappy, and retired. I sought for some time what I at length found here, a place where all real wants might be easily supplied, and where I might not be under the necessity of purchasing the assistance of men by the toleration of their follies. Here I saw fruits and herbs and water, and here determined to wait the hand of death, which I hope, when at last it comes, will fall lightly upon me.

Forty-eight years had I now passed in forgetfulness of all mortal cares, and without any inclination

to wander farther than the necessity of procuring sustenance required ; but as I stood one day beholding the rock that overhangs my cell, I found in myself a desire to climb it ; and when I was on its top, was in the same manner determined to scale the next, till by degrees I conceived a wish to view the summit of the mountain, at the foot of which I had so long resided. This motion of my thoughts I endeavoured to suppress, not because it appeared criminal, but because it was new ; and all change, not evidently for the better, alarms a mind taught by experience to distrust itself. I was often afraid that my heart was deceiving me, that my impatience of confinement rose from some earthly passion, and that my ardour to survey the works of nature was only a hidden longing to mingle once again in the scenes of life. I therefore endeavoured to settle my thoughts into their former state, but found their distraction every day greater. I was always reproaching myself with the want of happiness within my reach, and at last began to question whether it was not laziness rather than caution that restrained me from climbing to the summit of Teneriffe.

I rose therefore before the day, and began my journey up the steep of the mountain ; but I had not advanced far, old as I was and burthened with provisions, when the day began to shine upon me ; the declivities grew more precipitous, and the sand slid from beneath my feet ; at last, fainting with labour, I arrived at a small plain almost enclosed by rocks, and open only to the east. I sat down to rest awhile, in full persuasion, that when I had recovered my strength I should proceed on my design ; but when

once I had tasted ease, I found many reasons against disturbing it. The branches spread a shade over my head, and the gales of spring wafted odours to my bosom.

As I sat thus, forming alternately excuses for delay, and resolutions to go forward, an irresistible heaviness suddenly surprised me ; I laid my head upon the bank and resigned myself to sleep ; when methought I heard the sound as of a flight of eagles, and a being of more than human dignity stood before me. While I was deliberating how to address him, he took me by the hand with an air of kindness, and asked me solemnly, but without severity. "Theodore, whither art thou going?" "I am climbing," answered I, "to the top of the mountain, to enjoy a more extensive prospect of the works of nature." "Attend first," said he, "to the prospect which this place affords, and what thou dost not understand I will explain. I am one of the benevolent beings who watch over the children of the dust, to preserve them from those evils which will not ultimately terminate in good, and which they do not, by their own faults, bring upon themselves. Look round therefore without fear : observe, contemplate, and be instructed."

Encouraged by this assurance, I looked and beheld a mountain higher than Teneriffe, to the summit of which the human eye could never reach ; when I had tired myself with gazing upon its height, I turned my eyes towards its foot, which I could easily discover, but was amazed to find it without foundation, and placed inconceivably in emptiness and darkness. Thus I stood terrified and confused ;

above were tracks inscrutable, and below was total vacuity. But my protector, with a voice of admonition, cried out, Theodore, be not affrighted, but raise thy eyes again; the Mountain of Existence is before thee, survey it and be wise.

I then looked with more deliberate attention, and observed the bottom of the mountain to be a gentle rise, and overspread with flowers; the middle to be more steep, embarrassed with crags, and interrupted by precipices, over which hung branches loaded with fruits, and among which were scattered palaces and bowers. The tracts which my eye could reach nearest the top were generally barren; but there were among the clefts of the rocks a few hardy evergreens, which though they did not give much pleasure to the sight or smell, yet seemed to cheer the labour and facilitate the steps of those who were clambering among them.

Then, beginning to examine more minutely the different parts, I observed at a great distance a multitude of both sexes issuing into view from the bottom of the mountain. Their first actions I could not accurately discern; but, as they every moment approached nearer, I found that they amused themselves with gathering flowers under the superintendence of a modest virgin in a white robe, who seemed not over solicitous to confine them to any settled pace or certain track; for she knew that the whole ground was smooth and solid, and that they could not easily be hurt or bewildered. When, as it often happened, they plucked a thistle for a flower, Innocence, so was she called, would smile at the mistake. Happy, said I, are they who are under so gentle a government,

and yet are safe. But I had no opportunity to dwell long on the consideration of their felicity; for I found that Innocence continued her attendance but a little way, and seemed to consider only the flowery bottom of the mountain as her proper province. Those whom she abandoned scarcely knew that they were left, before they perceived themselves in the hands of Education, a nymph more severe in her aspect and imperious in her commands, who confined them to certain paths, in their opinion too narrow and too rough. These they were continually solicited to leave, by Appetite, whom Education could never fright away, though she sometimes awed her to such timidity, that the effects of her presence were scarcely perceptible. Some went back to the first part of the mountain, and seemed desirous of continuing busied in plucking flowers, but were no longer guarded by Innocence; and such as Education could not force back, proceeded up the mountain by some miry road, in which they were seldom seen, and scarcely ever regarded.

As Education led her troop up the mountain, nothing was more observable than that she was frequently giving them cautions to beware of Habits; and was calling out to one or another at every step, that a Habit was ensnaring them; that they would be under the dominion of Habit before they perceived their danger: and that those whom Habit should once subdue, had little hope of regaining their liberty.

Of this caution, so frequently repeated, I was very solicitous to know the reason, when my pro-

lector directed my regard to a troop of pygmies, which appeared to walk silently before those that were climbing the mountain, and each to smooth the way before her follower. I found that I had missed the notice of them before, both because they were so minute as not easily to be discerned, and because they grew every moment nearer in their colour to the objects with which they were surrounded. As the followers of Education did not appear to be sensible of the presence of these dangerous associates, or, ridiculing their diminutive size, did not think it possible that human beings should ever be brought into subjection by such feeble enemies, they generally heard her precepts of vigilance with wonder: and, when they thought her eye withdrawn, treated them with contempt. Nor could I myself think her cautions so necessary as her frequent inculcations seemed to suppose, till I observed that each of these petty beings held secretly a chain in her hand, with which she prepared to bind those whom she found within her power. Yet these Habits under the eye of Education went quietly forward, and seemed very little to increase in bulk or strength; for though they were always willing to join with Appetite, yet when Education kept them apart from her, they would very punctually obey command, and make the narrow roads in which they were confined easier and smoother.

It was observable, that their stature was never at a stand, but continually growing or decreasing, yet not always in the same proportions: nor could I forbear to express my admiration, when I saw in how

much less time they generally gained than lost bulk. Though they grew slowly in the road of Education, it might however be perceived that they grew; but if they once deviated at the call of Appetite, their stature soon became gigantic; and their strength was such, that Education pointed out to her tribe many that were led in chains by them, whom she could never more rescue from their slavery. She pointed them out, but with little effect; for all her pupils appeared confident of their own superiority to the strongest Habit, and some seemed in secret to regret that they were hindered from following the triumph of Appetite.

It was the peculiar artifice of Habit not to suffer her power to be felt at first. Those whom she led, she had the address of appearing only to attend, but was continually doubling her chains upon her companions; which were so slender in themselves, and so silently fastened, that while the attention was engaged by other objects, they were not easily perceived. Each link grew tighter as it had been longer worn; and when by continual additions they became so heavy as to be felt, they were very frequently too strong to be broken.

When Education had proceeded in this manner to the part of the mountain where the declivity began to grow craggy, she resigned her charge to two powers of superior aspect. The meaner of them appeared capable of presiding in senates, or governing nations, and yet watched the steps of the other with the most anxious attention, and was visibly confounded and perplexed if ever she suffered her regard to be drawn away. The other seemed to approve her submission.

as pleasing, but with such a condescension as plainly shewed that she claimed it as due; and indeed so great was her dignity and sweetness, that he who would not reverence, must not behold her.

“Theodore,” said my protector, “be fearless, and be wise; approach these powers, whose dominion extends to all the remaining part of the Mountain of Existence.” I trembled, and ventured to address the inferior nymph, whose eyes, though piercing and awful, I was not able to sustain. “Bright Power,” said I, “by whatever name it is lawful to address thee, tell me, thou who presidest here, on what condition thy protection will be granted?” “It will be granted,” said she, “only to obedience. I am Reason, of all subordinate beings the noblest and the greatest; who, if thou wilt receive my laws, will reward thee like the rest of my votaries, by conducting thee to Religion.” Charmed by her voice and aspect, I professed my readiness to follow her. She then presented me to her mistress, who looked upon me with tenderness. I bowed before her, and she smiled.

When Education delivered up those for whose happiness she had been so long solicitous, she seemed to expect that they should express some gratitude for her care, or some regret at the loss of that protection which she had hitherto afforded them. But it was easy to discover, by the alacrity which broke out at her departure, that her presence had been long displeasing, and that she had been teaching those who felt in themselves no want of instruction. They all agreed in rejoicing that they should no longer be sub-

ject to her caprices, or disturbed by her documents, but should be now under the direction only of Reason, to whom they made no doubt of being able to recommend themselves by a steady adherence to all her precepts. Reason counselled them, at their first entrance upon her province, to enlist themselves among the votaries of Religion; and informed them, that if they trusted to her alone, they would find the same fate with her other admirers, whom she had not been able to secure against Appetites and Passions, and who, having been seized by Habits in the regions of Desire, had been dragged away to the caverns of Despair. Her admonition was vain, the greater number declared against any other direction, and doubted not but by her superintendency they should climb with safety up the Mountain of Existence. “My power,” said Reason, “is to advise, not to compel; I have already told you the danger of your choice. The path seems now plain and even, but there are asperities and pitfalls, over which Religion only can conduct you. Look upwards, and you perceive a mist before you settled upon the highest visible part of the mountain; a mist by which my prospect is terminated, and which is pierced only by the eyes of Religion. Beyond it are the temples of Happiness, in which those who climb the precipice by her direction, after the toil of their pilgrimage, repose for ever. I know not the way, and therefore can only conduct you to a better guide. Pride has sometimes reproached me with the narrowness of my view, but, when she endeavoured to extend it, could only shew me,

“ below the mist, the bowers of Content; even they
“ vanished as I fixed my eyes upon them; and those
“ whom she persuaded to travel towards them were
“ enchained by Habits, and ingulfed by Despair, a
“ cruel tyrant, whose caverns are beyond the dark-
“ ness on the right side and on the left, from whose
“ prisons none can escape, and whom I cannot teach
“ you to avoid.”

Such was the declaration of Reason to those who demanded her protection. Some that recollected the dictates of Education, finding them now seconded by another authority, submitted with reluctance to the strict decree, and engaged themselves among the followers of Religion, who were distinguished by the uniformity of their march, though many of them were women, and by their continual endeavours to move upwards, without appearing to regard the prospects which at every step courted their attention.

All those who determined to follow either Reason or Religion, were continually importuned to forsake the road, sometimes by Passions, and sometimes by Appetites, of whom both had reason to boast the success of their artifices; for so many were drawn into by-paths, that any way was more populous than the right. The attacks of the Appetites were more impetuous, those of the Passions longer continued. The Appetites turned their followers directly from the true way, but the Passions marched at first in a path nearly in the same direction with that of Reason and Religion; but deviated by slow degrees, till at last they entirely changed their course.

Appetite drew aside the dull, and Passion the sprightly. Of the Appetites, Lust was the strongest; and of the Passions, Vanity. The most powerful assault was to be feared, when a Passion and an Appetite joined their enticements; and the path of Reason was best followed, when a Passion called to one side, and an Appetite to the other.

These seducers had the greatest success upon the followers of Reason, over whom they scarcely ever failed to prevail, except when they counteracted one another. They had not the same triumphs over the votaries of Religion; for though they were often led aside for a time, Religion commonly recalled them by her emissary Conscience, before Habit had time to enchain them. But they that professed to obey Reason, if once they forsook her, seldom returned; for she had no messenger to summon them but Pride, who generally betrayed her confidence, and employed all her skill to support Passion; and if ever she did her duty, was found unable to prevail, if Habit had interposed.

I soon found that the great danger to the followers of Religion was only from Habit; every other power was easily resisted, nor did they find any difficulty when they inadvertently quitted her, to find her again by the direction of Conscience, unless they had given time to Habit to draw her chain behind them, and bar up the way by which they had wandered. Of some of those, the condition was justly to be pitied, who turned at every call of Conscience, and tried, but without effect, to burst the chains of Habit: saw Religion walking forward at a

distance, saw her with reverence, and longed to join her; but were, whenever they approached her, withheld by Habit, and languished in sordid bondage, which they could not escape, though they scorned and hated it.

It was evident that the Habits were so far from growing weaker by these repeated contests, that if they were not totally overcome, every struggle enlarged their bulk and increased their strength; and a Habit opposed and victorious was more than twice as strong as before the contest. The manner in which those who were weary of their tyranny endeavoured to escape from them, appeared by the event to be generally wrong; they tried to loose their chains one by one, and to retreat by the same degrees as they advanced; but before the deliverance was completed, Habit always threw new chains upon her fugitive; nor did any escape her but those who, by an effort sudden and violent, burst their shackles at once, and left her at a distance; and even of these, many, rushing too precipitately forward, and hindered by their terrors from stopping where they were safe, were fatigued with their own vehemence, and resigned themselves again to that power from whom an escape must be so dearly bought, and whose tyranny was little felt, except when it was resisted.

Some however there always were, who when they found Habit prevailing over them, called upon Reason or Religion for assistance; each of them willingly came to the succour of her suppliant, but neither with the same strength, nor the same suc-

cess. Habit, insolent with her power, would often presume to parley with Reason, and offer to loose some of her chains if the rest might remain. To this Reason, who was never certain of victory, frequently consented, but always found her concession destructive, and saw the captive led away by Habit to his former slavery. Religion never submitted to treaty, but held out her hand with certainty of conquest; and if the captive to whom she gave it did not quit his hold, always led him away in triumph, and placed him in the direct path to the temple of Happiness, where Reason never failed to congratulate his deliverance, and encourage his adherence to that power to whose timely succour he was indebted for it.

When the traveller was again placed in the road of Happiness, I saw Habit again gliding before him, but reduced to the stature of a dwarf, without strength and without activity; but when the Passions or Appetites, which had before seduced him, made their approach, Habit would on a sudden start into size, and with unexpected violence push him towards them. The wretch, thus impelled on one side, and allured on the other, too frequently quitted the road of Happiness, to which, after his second deviation from it, he rarely returned: but, by a timely call upon Religion, the force of Habit was eluded, her attacks grew fainter, and at last her correspondence with the enemy was entirely destroyed. She then began to employ those restless faculties in compliance with the power which

she could not overcome; and as she grew again in stature and in strength, cleared away the asperities of the road to Happiness.

From this road I could not easily withdraw my attention, because all who travelled it appeared cheerful and satisfied; and the farther they proceeded, the greater appeared their alacrity, and the stronger their conviction of the wisdom of their guide. Some, who had never deviated but by short excursions, had Habit in the middle of their passage vigorously supporting them, and driving off the Appetites and Passions which attempted to interrupt their progress. Others, who had entered this road late, or had long forsaken it, were toiling on without her help at least, and commonly against her endeavours. But I observed, when they approached to the barren top, that few were able to proceed without some support from Habit: and that they, whose Habits were strong, advanced towards the mists with little emotion, and entered them at last with calmness and confidence; after which, they were seen only by the eye of Religion; and though Reason looked after them with the most earnest curiosity, she could only obtain a faint glimpse, when her mistress, to enlarge her prospect, raised her from the ground. Reason, however, discerned that they were safe, but Religion saw that they were happy.

“Now, Theodore,” said my protector, “withdraw thy view from the regions of obscurity, and see the fate of those who, when they were dismissed by Education, would admit no direction but

“ that of Reason. Survey their wanderings, and be
“ wise.”

I looked then upon the Road of Reason, which was indeed, so far as it reached, the same with that of Religion, nor had Reason discovered it but by her instruction. Yet when she had once been taught it, she clearly saw that it was right; and Pride had sometimes incited her to declare that she discovered it herself, and persuaded her to offer herself as a guide to Religion: whom after many vain experiments she found it her highest privilege to follow. Reason was however at last well instructed in part of the way, and appeared to teach it with some success, when her precepts were not misrepresented by Passion, or her influence overborne by Appetite. But neither of these enemies was she able to resist. When Passion seized upon her votaries, she seldom attempted opposition: she seemed indeed to contend with more vigour against Appetite, but was generally overwearied in the contest; and if either of her opponents had confederated with Habit, her authority was wholly at an end. When Habit endeavoured to captivate the votaries of Religion, she grew by slow degrees, and gave time to escape; but in seizing the unhappy followers of Reason, she proceeded as one that had nothing to fear, and enlarged her size, and doubled her chains, without intermission, and without reserve.

Of those who forsook the directions of Reason, some were led aside by the whispers of Ambition, who was perpetually pointing to stately palaces,

situated on eminences on either side, recounting the delights of affluence, and boasting the security of power. They were easily persuaded to follow her, and Habit quickly threw her chains upon them; they were soon convinced of the folly of their choice, but few of them attempted to return. Ambition led them forward from precipice to precipice, where many fell and were seen no more. Those that escaped were, after a long series of hazards, generally delivered over to Avarice, and enlisted by her in the service of Tyranny, where they continued to heap up gold till their patrons or their heirs pushed them headlong at last into the caverns of Despair.

Others were enticed by Intemperance to ramble in search of those fruits that hung over the rocks, and filled the air with their fragrance. I observed, that the Habits which hovered about these soon grew to an enormous size, nor were there any who less attempted to return to Reason, or sooner sunk into the gulfs that lay before them. When these first quitted the road, Reason looked after them with a frown of contempt, but had little expectations of being able to reclaim them; for the bowl of intoxication was of such qualities as to make them lose all regard but for the present moment: neither Hope nor Fear could enter their retreats; and Habit had so absolute a power, that even Conscience, if Religion had employed her in their favour, would not have been able to force an entrance.

There were others whose crime it was rather to neglect Reason than to disobey her: and who re-

treated from the heat and tumult of the way, not to the bowers of Intemperance, but to the maze of Indolence. They had this peculiarity in their condition, that they were always in sight of the road of Reason, always wishing for her presence, and always resolving to return to-morrow. In these was most eminently conspicuous the subtlety of Habit, who hung imperceptible shackles upon them, and was every moment leading them farther from the road, which they always imagined that they had the power of reaching. They wandered on from one double of the labyrinth to another with the chains of Habit hanging secretly upon them, till, as they advanced, the flowers grew paler, and the scents fainter; they proceeded in their dreary march without pleasure in their progress, yet without power to return; and had this aggravation above all others, that they were criminal but not delighted. The drunkard for a time laughed over his wine; the ambitious man triumphed in the miscarriage of his rival; but the captives of Indolence had neither superiority nor merriment. Discontent lowered in their looks, and Sadness hovered round their shades; yet they crawled on reluctant and gloomy, till they arrived at the depth of the recess varied only with poppies and nightshade, where the dominion of Indolence terminates, and the hopeless wanderer is delivered up to Melancholy; the chains of Habit are rivetted for ever; and Melancholy, having tortured her prisoner for a time, consigns him at last to the cruelty of Despair.

While I was musing on this miserable scene, my protector called out to me, "Remember, Theodore,

“and be wise, and let not Habit prevail against
“thee.” I started, and beheld myself surrounded by
the rocks of Teneriffe; the birds of light were sing-
ing in the trees, and the glances of the morning darted
upon me.

THE PICTURE OF HUMAN LIFE.

TRANSLATED FROM THE GREEK OF CEBES, A DISCIPLE OF SOCRATES.

AS we were walking in the temple of Saturn, and observing several of the presents dedicated to that god, we were particularly struck with a picture hung up before one of the chapels. Both the manner and the subject of it seemed to be foreign; so that we were at a loss to know either whence, or what it was. What it represented was neither a city nor a camp; but an enclosure, containing two other enclosures, the one larger and the other less. To the outer enclosure there was a portal, with a great number of persons standing before it, and several females within; and an aged man standing by the portal, in the attitude of giving directions to those who were going in.

After we had been debating among ourselves for some time, what all these things should mean, an elderly person, who happened to be by, addressed himself to us in the following manner.

Old Citizen. As you are strangers, 'tis no wonder that you should be at a loss to find out the meaning

of this picture ; since several of the natives of this city themselves know not the true intent of it : and indeed it was not placed here by any of our citizens, but by a stranger who visited these parts several years ago. He was a very sensible man, and a great philosopher ; and, both in his conversation and practice, seemed to approach nearer to the doctrines of Pythagoras and Parmenides, than to any other of our sects. It was he who built this temple, and dedicated this picture in it to Saturn.

Stranger. Have you then seen the very person who gave it ? and was you acquainted with him ?

O. C. Yes, I was both well acquainted with him, and admired him very much ; for though he was rather young, his conversation was full of wisdom ; and, among other things, I have often heard him explaining the subject of the picture before us.

S. I intreat you, if it will not be too troublesome, to acquaint us with his explanation of it, for it is what we were all longing to know.

O. C. That will be rather a pleasure than any trouble to me ; but I ought to forewarn you of one thing before I begin, which is this, that the hearing it is attended with some danger.

S. What danger can there be in that ?

O. C. It is no less than this, that if you observe and follow the lesson that it gives you, it will make you wise and happy ; but if you neglect it, you will be most miserable and wretched all your days. So that the explaining of this, is not unlike the riddle said to have been proposed to people by the sphynx, which if the hearer understood, he was saved ; but if

not, he was to be destroyed. It is much the same in the present case; for ignorance is full as dangerous in life, as the sphynx was supposed to be in the fable. Now the picture before us includes all the doctrine of what is good in life, what is bad and what indifferent; so that if you should take it wrong, you will be destroyed by it; not indeed all at once, as the people were by that monster; but by little and little, through all the residue of your life, as those are who are given up to be put to death by slow tortures. On the contrary, if you understand it aright, then will your ignorance be destroyed, and you will be saved, and become happy and blest for all the rest of your days. Do you, therefore, attend carefully to what I shall say to you, and observe it as you ought.

S. O heavens, how have you increased our longing to hear, what may be of such very great importance to us!

O. C. It is certainly of the greatest that can be.

S. Explain it then to us immediately, we beseech you; and be assured, that we will listen to you with all the care and attention, that a matter which concerns us so greatly must demand.

O. C. You see this grand enclosure. All this circuit, is the **CIRCUIT OF HUMAN LIFE**, and that great number of people standing before the portal, are those who are to enter into life. This aged person, who stands by the entrance holding a paper in one of his hands, and pointing with the other, is the **GENIUS** who directs all that are going in, what they should do after they are entered into life; and shews them which way they ought to take in order to be happy in it.

S. And which is the way that he shews them? where is it?

O. C. Do you see that seat on the other side, before the portal; and the woman sitting on it, with a cup in her hand? She who is so finely dressed out, and makes so plausible an appearance.

S. I see her; and pray who is she?

O. C. She is DECEIT, the misleader of man.

S. And what does she do there?

O. C. As they are entering into life, she offers them to drink of her cup.

S. And what does her cup contain?

O. C. Ignorance and error; of which when they have drunk, they enter into life.

S. And do all drink of this cup?

O. C. All drink of it; but some more, and some less. A little farther, within the portal, don't you see a company of loose women, with a great deal of variety both in their dress and airs?

S. I see them.

O. C. Those are the OPINIONS, DESIRES, and PLEASURES; who, as the multitude enter, fly to them; embrace each of them with great earnestness; and then lead them away with them.

S. And whither do they lead them?

O. C. Some to the way of safety; and others, to perdition through their folly.

S. Ah, why did they drink of that liquor before they came in?

O. C. All of them alike tell those whom they are embracing, that they will lead them to what is best; and will make their lives quite happy: whilst the new comers, blinded by the large draughts they

have taken from the cup of DECEIT, are incapable of distinguishing which is the true way in life ; and wander about inconsiderately, here and there, as you see they do. You may observe too, that they who have been in some time, go about just as these direct them.

S. They do so. But, pray, who is that woman who seems to be both blind and mad, and who stands on that round stone there ?

O. C. That is FORTUNE ; and she is really not only mad and blind, but deaf too.

S. What then can her business be ?

O. C. She flies about every where, and snatches what he has from one, to give it to another ; and then takes it away again from [him, to give it to a third ; without any manner of meaning, or any degree of certainty : which latter is very aptly signified by her figure here.

S. How so ?

O. C. By her standing on that round stone, which shews that there is no stability or security in her favours ; as all who trust to her find, by some great and unexpected fall.

S. And what does all that company about her want of her ? and how are they called ?

O. C. They are called, The INCONSIDERATES, and are begging for some of those things which she flings about her.

S. And why do they appear with such a diversity of passions ? some of them as overjoyed, and others as very much distress ?

O. C. They who smile and rejoice, are such as have received something from her hands ; and these

call her by the title of **GOOD FORTUNE**: and such as weep and mourn, are they from whom she has resumed what she had before given them; and these call her **BAD FORTUNE**.

S. And what is it she gives, that should make the former rejoice so much on the receiving it, and the latter lament so much at the loss of it?

O. C. All those things which the greater part of mankind think good, such as wealth, and glory, and nobility, and offspring, and dignities, and crowns; and all such sort of things.

S. And are not these really good things?

O. C. As to that we may talk more at large another time; but at present, if you please, let us stick to our picture. You see then, after entering this portal, there is another enclosure, on a raised ground, and several women standing before it, dress'd out too, much like ladies of pleasure.

S. They are so.

O. C. Of these, this is **INTEMPERANCE**; that **LUXURY**; this is **AVARICE**; and that other **FLATTERY**.

S. And what do they stand there for?

O. C. They are waiting for those who have received any thing from **FORTUNE**; and as they meet with them, they embrace them with the greatest fondness, attach themselves to them, do every thing they can to please them, and beg them to stay with them; promise them to render their whole lives delightful, easy, and free from all manner of care or trouble. Now whoever is carried away by them to **VOLUPTUOUSNESS**, will find their company agreeable to him at first, whilst they are fondling and tickling

his passions; but it is soon quite otherwise; for when he recovers his senses, he perceives that he did not enjoy them, but was enjoyed by them; and that they prey upon him, and destroy him. And when he has, by their means, consumed all that he had received from FORTUNE, then is he obliged to become their slave, to bear all the insults they are pleased to impose upon him, to yield to all the most scandalous practices, and in the end to commit all sorts of villainies for their sake; such as betraying, defrauding, robbing, sacrilege, perjury, and the like: and when all these fail him, then is he given up to PUNISHMENT.

S. And where is she?

O. C. Don't you see there, a little behind those women, a narrow dark cavern, with a small sort of door to it, and some miserable women that appear within, clad only in filth and rags?

S. I see them.

O. C. She who holds up the scourge in her hand, is PUNISHMENT; this, with her head sunk almost down to her knees, is SORROW; and that other, tearing her hair, is ANGUISH OF MIND.

S. And pray, who is that meagre figure of a man without any clothes on, just by them? and that lean woman, that resembles him so much in her make and face?

O. C. Those are REPINING, and his sister DESPAIR. To all these is the wretch I was speaking of delivered up, and lives with them in torments, till finally he is cast into the house of MISERY; where he passes the remainder of his days in all kinds of wretchedness; unless, by chance, REPENTANCE should fall in his way.

S. What happens then?

O. C. If **REPENTANCE** should chance to meet with him, she will take him out of the evil situation he was in, and will place a different **OPINION** and **DESIRE** before him: one, of those which lead to **TRUE SCIENCE**; and the other, of those which lead to **SCIENCE** falsely so called.

S. And what then?

O. C. If he embraces that which leads to **TRUE SCIENCE**, he is renewed and saved, and becomes a happy man for all his days; but if the other, he is bewildered again by **FALSE SCIENCE**.

S. Good Heaven! what a new danger do you tell me of! And pray, which is **FALSE SCIENCE**?

O. C. Do you see that second enclosure?

S. Very plainly.

O. C. And don't you see a woman standing without the enclosure, just by the entrance into it, of a very striking appearance, and very well dressed?

S. As plainly.

O. C. That is she whom the multitude, and all the unthinking part of mankind, call by the name of **Science**; though she is really **FALSE SCIENCE**. Now those who are saved out of the house of misery call in here, in their passage to **TRUE SCIENCE**.

S. Is there then no other way to **TRUE SCIENCE** but this?

O. C. Yes, there is.

S. And pray, who are those men that are walking to and fro within the enclosure?

O. C. Those who have attached themselves to **False Science**, mistaking her for the **True**.

S. And what are they?

O. C. Some of them are poets, some rhetoricians, some logicians, some students in music, arithmetic, and geometry; pleurists, peripatetics, critics, and several others of the same rank.

S. And who are those women who seem so busy among them, and are so like **INTEMPERANCE**, and her companions, in the first enclosure?

O. C. They are the very same.

S. Are they then admitted into this second enclosure?

O. C. Yes, indeed; but not so readily, or frequently, as in the first.

S. And are the **OPINIONS** too admitted?

O. C. Undoubtedly; for the persons who belong to this enclosure, have not yet got rid of the draught which they took out of the cup of Deceit.

S. What then, **IGNORANCE** remains still with them?

O. C. That it does, and **FOLLY** too; nor can they get rid of the **OPINIONS**, nor all the rest of this vile train, till they quit False Science, and get into the way of the True; till they drink of her purifying liquor, and wash away all the dregs of the evils that remain in them; which that, and that only, is capable of doing. Such therefore as fix their abode with False Science will never be delivered; nor can all their studies clear them from any one of those evils.

S. Which then is the way to True Science?

O. C. Do you see that place on high there, that looks as if it were uninhabited?

S. I do.

O. C. And do you discern a little opening be-

tween the rocks, and a small track leading to it, which is scarce beaten; and with very few people walking in it, as it is all rough, and stony, and difficult?

S. I discern it very plainly.

O. C. And don't you see a high cliff on the hill, almost inaccessible, and with several precipices about it?

S. I see it.

O. C. That is the way which leads to **TRUE SCIENCE.**

S. It is frightful only to look upon it.

O. C. And up above that cliff, don't you see a large rising rock, all surrounded with precipices?

S. I see it.

O. C. Then you see also the two women that stand upon it, with so much firmness and beauty in their make, and how earnestly they extend their hands.

S. I do so; and pray who are they?

O. C. Those two are sisters, and are called **TEMPERANCE** and **PERSEVERANCE.**

S. And why do they extend their hands so earnestly?

O. C. They are encouraging those who are arrived to that rock, and calling out to them to be of good heart, and not to despond, because they have but a little more to suffer, and then will find the road all easy and pleasant before them.

S. But how can they ever get up upon that rock itself? for I don't see any the least path to ascend it by.

O. C. The two sisters descend to meet them, and

help them up. Then they order them to rest a little, inspire them with new strength and resolution, and promise to conduct them to **TRUE SCIENCE**: point out the way to them, make them observe how even, and easy, and charming it is; and how free from all manner of difficulty or danger, as you see it represented here.

S. How well does it answer the description !

O. C. You see before that grove, the ground that extends itself into a beautiful meadow, with such a lively light over it.

S. Very plainly.

O. C. Then you see the third enclosure, in the midst of that meadow, and the portal to it.

S. I do so; and pray, what do you call this place ?

O. C. The habitation of the blest; for here it is that **HAPPINESS**, and all the **VIRTUES** dwell.

S. What a charming place have they to dwell in !

O. C. And do you observe the lady near the portal, with so beautiful and steady a look : of a middle age, or rather a little past it, and dressed in a plain long robe, without any the least affectation of ornaments ? She is standing there, not on a round stone, but a square one, firmly fixed in the ground ; and by her are two other women, who look as if they were her daughters.

S. They do so.

O. C. Of these, she in the midst is **SCIENCE**, and the other two are **TRUTH** and **PERSUASION**.

S. And why does **SCIENCE** stand on that square stone ?

O. C. To signify, that her ways are ways of certainty, and that the presents which she gives to those that arrive to her, are firm and lasting.

S. And what is that she gives to them?

O. C. Strength and tranquillity of mind, arising from a full assurance, that they shall never undergo any evil again in their whole lives.

S. O heavens, how desirable are her presents! But why does she stand thus without the enclosure?

O. C. To receive those that arrive thither, and give them to drink of her purifying liquor, and to conduct them into the presence of the VIRTUES within, when they are thoroughly cleansed by it.

S. I don't rightly understand what you mean by this cleansing.

O. C. I will make that clearer to you. Suppose any friend of yours was afflicted with some dangerous fit of illness; if he goes to some knowing physician, and takes what he prescribes, in order to root out the causes of his disease, he may be restored to a perfect state of health; but if he refuses to take what is ordered him, his physician will give him up, and leave him to be destroyed by his distemper.

S. That is clear enough.

O. C. In the very same manner, when any one comes to SCIENCE, she takes him under her care, and gives him a draught of her cup to cleanse him, and drive out all the noxious things that are in him.

S. And what are those noxious things?

O. C. The error and ignorance that he drank out of the cup of DECEIT; and his arrogance, and lust, and intemperance, and anger, and covetousness; in

short, all the evil impressions and habits that he had contracted in his passage through the first enclosure.

S. And when she has cleansed him from all these, whither does she send him?

O. C. In through that portal to **KNOWLEDGE** and the other **VIRTUES**.

S. And where are they?

O. C. Don't you see, within the portal, a select company of ladies, of singular beauty and decency, both in their look and dress; and in a word, with every thing handsome, and nothing affected about them?

S. I see them, and should be glad to know their names.

O. C. That at the head of them is **KNOWLEDGE**, and the rest are all her sisters, **FORTITUDE**, **JUSTICE**, **HONESTY**, **PRUDENCE**, **DECENCY**, **FREEDOM**, **TEMPERANCE**, and **CLEMENCY**.

S. What beauties they are! and what a longing desire do they inspire one with to enjoy their companies!

O. C. That you may do, if you are wise enough to follow the way that I have shewn you.

S. That will I strive to do as far as I am able.

O. C. Then you will arrive safely to them.

S. And when these have received any one, whither do they carry him?

O. C. To their mother.

S. And who is she?

O. C. **HAPPINESS**.

S. And where?

O. C. Do you see the way which leads to that high

edifice, which appears above all the enclosures, as a citadel does above all the buildings in a city?

S. Yes.

O. C. And do you see that composed, beautiful lady, sitting on a throne in the portico to it, with so easy and disengaged an air, and with that beautiful chaplet of fresh flowers on her head?

S. How beautiful does she look!

O. C. She is HAPPINESS.

S. And when any one arrives to her, what does she do to him?

O. C. HAPPINESS, assisted by all the Virtues, crowns him with her own influences; in the same manner as they are crowned, who have obtained the greatest conquests.

S. But what conquests has he obtained?

O. C. The greatest conquests, and over the most terrible of monsters, which formerly devoured, and tormented, and enslaved him. All these has he conquered, and driven from him; and is become so much master both of himself and them, as to make those things obey him, which he himself obeyed before.

S. I don't yet comprehend what monsters you mean; and should be very glad to know.

O. C. In the first place, his ignorance and error; will you not allow them to be monsters?

S. Yes, and very dangerous ones too.

O. C. Then, his sorrows, and repinings, and covetings, and intemperance, and every thing that is bad. All these has he subdued, and is not subdued by them as he used to be.

S. O glorious exploits! and most noble of all victories! But be so good as to inform me yet farther, what may be the influence of the crown, with which you are saying he was to be crowned?

O. C. It is that which renders him happy: for he who has it once on his head, immediately becomes easy and blest; and does not place his hopes of happiness in any thing without him, but possesses it in his own breast.

S. How desirable is such an acquisition! And after he is crowned, what does he do? or whither does he go?

O. C. The **VIRTUES** take him, and lead him to the place that he had left, and bid him observe those who continue there, amidst what difficulties and troubles they pass their time; and how they are shipwrecked in life, or wander about it; or are conquered, and led along like captives, some by **INTEMPERANCE**, and others by **ARROGANCE**; here by **COVETOUSNESS**, and there by **VAIN-GLORY**, or any other of the **VICES**: whose chains they are in vain striving to get loose from, that they might escape, and get to this place of rest: so that their whole life seems to be nothing but one ineffectual struggle. And all this they suffer from their mistaking the right way, and forgetting the orders given them by the directing **GENIUS**.

S. That appears to me to be the case; but I don't so clearly see, why the **VIRTUES** lead the person that has been crowned, back to the place that he had left.

O. C. Because he had never formed a full and

exact idea of the things that passed there, but at best had only guessed and doubted about them: for, from the draught of ignorance and error that he had taken at his entrance, he had imagined things that were bad to be good, and things that were good to be bad; by which means he had lived wretchedly, as indeed all do while they are there. But now that he has obtained the knowledge of what is really good, he can both live happily himself, and can see how very unhappy the others are.

S. And when he has taken a full view there, what does he do, or whither does he go?

O. C. Wherever he pleases, for every where is he as safe as one that is got into the Corycian cave; so that wheresoever he goes, he lives in full security and undisturbed happiness; and is received by all others with as much pleasure as a good physician is by his patients.

S. And has he no longer any dread of those females which you called monsters? nor any apprehension of being hurt by them?

O. C. Not in the least; for he will never any more be molested either by ANGUISH, or SORROW, or INTemperance, or COVETOUSNESS, or POVERTY, or any other evil: for he is now master of them all, and superior to every thing that formerly gave him any trouble. As they who practise the catching of vipers, are never hurt by the bite of those creatures, which is so venomous and even mortal to others, because they have an antidote against their poison; so he is safe from any influence of all these evils, because he has the antidote against them.

S. That you have explained to me very well; but I beg you would tell me yet farther, who they are that are descending from the middle of the rock, some of them crowned, and with an air of joy on their countenances; and others without crowns, that seem to have been rejected, and have the marks of several falls about them, and are followed by certain women.

O. C. They who are crowned, are such as got safe to SCIENCE, and are delighted with the reception that she has given them; and those without crowns, who seem to have been rejected by her, and are returned in so bad a condition, are such as found their hearts fail them, when they came to the precipice where PATIENCE stands; and turned back from that point, and are now wandering irregularly they know not whither.

S. And who are the women that are following them?

O. C. They are SORROW and ANGUISH, and DESPAIR and INFAMY, and IGNORANCE.

S. By your account, they are attended by every thing that is bad!

O. C. Undoubtedly they are, but when they are got down into the first enclosure, to VOLUPTUOUSNESS and INTEMPERANCE, they don't lay the blame on themselves, but immediately say all the ill things they can of SCIENCE, and of those who are going to her; and tell how miserable and wretched those poor people are, and how much they suffer, who leave the life they might have enjoyed below, and the good things bestowed there.

S. And what are the good things which they mean?

O. C. Luxury and Intemperance, to say all in two words; for to indulge their passions like brute beasts, is what they look upon as the completion of all their happiness.

S. And those other women that are coming down there, who look so gay and so well pleased with themselves, what are they?

O. C. The OPINIONS, who, after conducting those to SCIENCE, who have gained admission to the VIRTUES, are returning to bring up others, and to acquaint them how happy those are, whom they have already conducted up thither.

S. And have they been admitted to the VIRTUES themselves?

O. C. By no means; for 'tis not allowable for OPINION to enter, where KNOWLEDGE has her dwelling. Their business, therefore, was only to conduct them to SCIENCE; and when she has received them, they turn back again to bring others; like transportships, which as soon as they have delivered one freight, return for another.

S. You have now, I think, very well explained all the figures in the picture; but you have not yet told us what directions they were, which the Genius at the first portal gives to those that are entering into life.

O. C. He bids them be of good courage. Wherefore be you also of good courage; for I will tell you the whole, and leave no one thing unexplained to you.

S. We shall be extremely obliged to you.

O. C. You see that blind woman there on the round stone, who I told you before was FORTUNE.

S. I see her.

O. C. As to that woman, he orders them not to place any confidence in her, nor to look on any of her gifts as firm or secure, nor to consider them as their property; for there is no hindering her from resuming them, and giving them to any body else; and 'tis what she is extremely apt to do. He therefore orders them to regard all her presents with indifference, and not to rejoice if she makes them any, nor to be dejected if she takes them away, and to think neither well nor ill of her; for whatever she does is done without thought, and all by mere chance and accident, as I have acquainted you already. 'Tis on this account that the Genius commands them, not to attach themselves to any thing she can give; nor to be like those simple bankers, who when they have received any sum of money in trust, are apt to be pleased with it, and look upon it as their own; and when they are called upon to repay it, grow uneasy, and think it very hard; not considering that it was deposited in their hands on that very condition, that the true owners might demand it again whenever they pleased. Just thus the GENIUS commands men to look upon all the gifts of FORTUNE: and to be aware that she may recall them whenever she has a fancy to do it; or may send in more, and, if she pleases, may resume that and the former all together. He therefore commands those who are entering into life, to receive whatever she offers them, and, as soon as they

have received it, to go on in quest of a more lasting acquisition.

S. What acquisition do you mean?

O. C. That which they may obtain from SCIENCE, if they can arrive safe to her.

S. And what is that she gives them?

O. C. The true knowledge of what is really good, and the firm, certain, and unchangeable possession of it. He therefore commands them to quit Fortune immediately, in pursuit of this; and when they come to those women, who, as I told you before, were **INTEMPERANCE** and **VOLUPTUOUSNESS**, to leave them too directly, and not to mind whatever they can say; but to go on for the enclosure of **FALSE SCIENCE**; there he bids them stay a little while, to get what may be useful to them on the rest of their road, and then to leave her directly too, and go on for **TRUE SCIENCE**. These are the orders which the **GENIUS** gives to all that enter into life; and whoever transgresses or neglects them will be a miserable wretch. I have now explained the whole of the parable contained in this painting; but if you have any particular question to ask in relation to any thing that I have said, I am very ready to answer it.

S. We are much obliged to you. Pray then, what is it that the **GENIUS** orders them to get in the enclosure of Science, falsely so called?

O. C. Whatever may be of use to them.

S. And what is there, that may be of use to them?

O. C. Literature, and so much of the sciences as

Plato says may serve people in the beginning of their lives as a bridle, to keep them from being drawn away by idler pursuits.

S. And is it necessary for all who would arrive at True Science, to do this?

O. C. No, it is not necessary, but it may be useful; though, in truth, these things themselves do not contribute towards making them the better men.

S. Not contribute at all towards making them better!

O. C. Not at all, for they may be as good without them. And yet they are not wholly unuseful; for they may sometimes help us, as interpreters do, to the meaning of a language we don't understand: but, after all, 'tis better to understand the language ourselves, than to have any need of an interpreter; and we may be good, without the assistance of learning.

S. In what then have the learned any advantage over others, towards becoming better men?

O. C. Why do you imagine they should have any advantage; since you see they are deceived like others, as to what is good or bad; and continue to be as much involved in all manner of vices? for there is nothing that hinders a man, who is a master of literature, and knowing in all the sciences, from being at the same time a drunkard, or intemperate, or covetous, or unjust, or villanous, or, in one word, imprudent in all his ways.

S. 'Tis true, we see too many instances of such.

O. C. Of what advantage then is their learning, toward making them better men?

S. You have made it appear, that it is of none ; but pray what is the reason of it ?

O. C. The reason is this: that when they are got into the second enclosure, they fix there as if they were arrived at True Science. And what can they get by that ? since we see several persons, who go on directly from INTEMPERANCE, and the other VICES in the first enclosure, to the enclosure of TRUE SCIENCE, without ever calling in where these learned persons have taken up their abode. How then can the learned be said to have any advantage over them ? On the contrary, they are less apt to exert themselves, or to be instructed, than the former.

S. How can that be ?

O. C. Because they who are in the second enclosure, not to mention any other of their faults, at least profess to know what they do not know: so that they acquiesce in their ignorance, and have no motive to stir them up toward the seeking of TRUE SCIENCE. Besides, do you not observe another thing ; that the OPINIONS, from the first enclosure, enter in among them, and converse with them, as freely as with the former ? so that they are not at all better even than they ; unless REPENTANCE should come to them, and should convince them, that it is not SCIENCE they have been embracing all this while ; but only the false appearance of her, which has deceived them. But while they continue in the same mind they are in, there is no hope left for them. To close all, my friends, what I would entreat of you is, to think over every thing I have said to you, to weigh it well in your minds, and to practise accordingly.

Get a habit of doing right, whatever pain it costs you; let no difficulties deter you, in the way to VIRTUE: and account every thing else despicable, in comparison of this. Then will the lesson that I have taught you, prove to yourselves a lesson of HAPPINESS.

END OF THE SECOND VOLUME.
